New Catalog

Name this Catalog

A catalog allows you to share vApp templates and media with other users in your organization. You can also have a private catalog for vApp templates and media that you frequently use.

Name *

Description

Back Next Finish Cancel

Select Storage Type

- Use any storage available in the organization

Choose this option if you do not need to store catalog items on a specific storage.

- Pre-provision on specific storage policy

Choose this option if you want to store catalog items on a specific VDC storage policy.

- vApp templates in this catalog will be fast provisioned on selected VDC storage policy.
- Instantiating a vApp from fast provisioned vApp template is faster.
- A VDC storage policy selected will cause the vApp template size to count against your catalog storage quota.

Virtual Machine name: VMfromScratch *

A label for this VM that appears in VCD lists.

Computer name: VMfromScratch *

The computer name / host name set in the guest OS of this VM that identifies it on a network.
This field is restricted to 15 characters for Windows. For non-Windows systems it can be 63 characters long and contain dots.

Description: My First VM From Scratch

Operating System Family: Linux

Operating System: CentOS 4/5/6 (64-bit)

VMware Tools: Not installed
This is the installed version of VMware tools. Power on the virtual machine and use its context menu to upgrade to the latest VMware tools.

Virtual hardware version: HW10
 Upgrade to Hardware Version 10
This is the current virtual hardware version. Power off the virtual machine and upgrade to an intermediate virtual hardware version here or use its context menu to upgrade to the latest virtual hardware version.

New Catalog ? ✕

Name this Catalog

Add Storage

Share this Catalog

Ready to Complete

A catalog allows you to share vApp templates and media with other users in your organization. You can also have a private catalog for vApp templates and media that you frequently use.

Name *

Description

Back Next Finish Cancel

Select Storage Type

- Use any storage available in the organization

Choose this option if you do not need to store catalog items on a specific storage.

- Pre-provision on specific storage policy

Choose this option if you want to store catalog items on a specific VDC storage policy.

- vApp templates in this catalog will be fast provisioned on selected VDC storage policy.

- Instantiating a vApp from fast provisioned vApp template is faster.

- A VDC storage policy selected will cause the vApp template size to count against your catalog storage quota.

DHCP NAT Firewall Static Routing VPN Load Balancer

Dynamic Host Configuration Protocol (DHCP) automates IP address assignment to virtual machines connected to organization VDC networks. You can configure and manage IP address ranges and lease parameters for each of the organization VDC networks connected to this edge gateway.

Enable DHCP

Applied On	IP Range	Default Lease	Max Lease	Enabled

Add... Edit... Delete

OK Cancel

Add DHCP Pool

DHCP automatically provides IP addresses to VMs.

Enable pool

Applied on: default-routed-network

IP range: 192.168.109.110-192.168.109.120 *

Default lease time: 3600 Seconds

Max lease time: 7200 Seconds

OK Cancel

DHCP **NAT** Firewall Static Routing VPN Load Balancer

Network Address Translation (NAT) modifies the source/destination IP addresses of packets arriving to and leaving from this Edge Gateway. Source NAT (SNAT) translates the source address of a packet before leaving this gateway, whereas Destination NAT(DNAT) translates the destination IP address/port of a packet received by this gateway.

Applied On	Description	Type	Original IP	Original Port	Translated IP	Translated Port	Protocol	Enabled
d5p6v43-ext		SNAT	192.168.109.2	any	46.244.33.122	any	ANY	✓
d5p6v43-ext		DNAT	46.244.33.122	80	192.168.109.2	80	TCP	✓

Add SNAT... Add DNAT... Edit... Delete

Add Destination NAT Rule

A destination NAT rule changes the destination IP address and, optionally, port of inbound packets. Use the Applied on control to specify a network on which to apply the rule. Use the Original (External) IP/range control to specify a range of destination IP addresses from that network to which the rule applies. Use the Translated (Internal) IP/range control to specify a range of IP addresses to which destination addresses on inbound packets will be translated. You can optionally constrain matching packets to a specific port or ICMP packet type. For more information, see the Help.

Applied on:

d5p6v43-ext

Description:

Secure SSH connection to PROD-HTTP-1 from
OUTSIDE world

Original (External) IP/range:

46.244.33.122 *

Protocol:

TCP

Original port:

ICMP type:

ANY

Translated (Internal) IP/range:

192.168.109.2 *

Translated port:

22

Enabled

OK

Cancel

DHCP NAT **Firewall** Static Routing VPN Load Balancer

Rules can be added to the Firewall to allow or deny specific network traffic. The order of these rules can be changed by selecting one or more rules, dragging and dropping them at the desired location in the list. The order of any selected rules is preserved after dropping them into a different location within the list.

Enable firewall

Default action Deny Allow Log

Applicable to traffic that does not match the rules in the list.

Rule Id	Name	Source	Destination	Protocol	Action	Log	Enabled
1	Internet	Any:Any	Any:Any	ANY	Allow	✓	✓
2	Port 80	192.168.109.2:80	46.244.33.122:80	TCP	Allow	-	✓

vCloud Connector Mode (vCCNode 2.7.0.0 Build 2270314)

Welcome, and thanks for installing the vCloud Connector Mode.

To set up your vCloud Connector Mode, point your browser to the Mode administrative page at <https://198.19.99.246:5480/>

To login, use username "admin" and the default password "vmware".

Note: you must install and setup a Node in every vSphere or vCloud you would like to access from vCloud Connector.

After you set up your Nodes you must set up your vCloud Connector UI.

For more information on the entire set up process, see the vCloud Connector Documentation Center at <http://pubs.vmware.com/hybridcloud-27/index.jsp>

Important Information about High Availability

In order to ensure that your cluster maintains its current capacity and performance, you may need to add more nodes after enabling HA.

Enable High Availability

To enable High Availability, select the option below and choose a node to be the Master Replica.

The Master and Master Replica should have resolvable names or static IP addresses. To ensure complete protection the two nodes should not share hardware.

	Node Name	Node Address	Current Cluster Role
<input checked="" type="radio"/>	vROPs-Data-1	198.19.99.246	Data

Enable High Availability for this cluster

Select a target network for each recovery operation.

Recovery network: Demo-Recovery

Test network: <select network>
<select network>
Demo-Recovery
Demo-Trust
default-isolated
default-routed

1 Replication type
2 Target site
3 Replication server
4 Target location
5 Replication options
6 Recovery settings
7 Ready to complete

Replication type

Select the type of replication to configure.

Replicate to a vCenter Server

Select this option to configure replication to another vCenter Server

Replicate to a cloud provider

Select this option to configure replication to a cloud provider

- ✓ 1 Target site
- ✓ 2 Replication server
- ✓ 3 Target location
- 4 Replication options**
- 5 Recovery settings
- 6 Ready to complete

Replication options

Specify replication options for the virtual machine(s).

Guest OS quiescing

Quiescing may take several minutes and may affect RPO times. Use only for virtual machines that are configured to support quiescing methods.

Quiescing method: ▼

- None
- MS Shadow Copy Services (VSS)

Configure Replication for Linux

- ✓ 1 Target site
- ✓ 2 Replication server
- ✓ 3 Target location
- ✓ 4 Replication options
- ✓ **5 Recovery settings**
- ✓ 6 Ready to complete

Recovery settings

Specify recovery settings for the virtual machine(s).

Recovery Point Objective (RPO)

Lower RPO times will reduce potential data loss, but will use more bandwidth and system resources.

15 min  24 hr

4 hr 0 min

Point in time instances

Recent replication instances will be converted to snapshots during recovery. (Replication of existing VM snapshots is not supported.)

Enable

Keep 3 instances per day for the last 5 days (15 total)

You may need to adjust the RPO to achieve the desired number of instances per day. The maximum number of retained instances is 24.

Recovery settings validation:

✓ Validation succeeded

Back

Next

Finish

Cancel

Recovery options

Select the option to use during recovery.

Synchronize recent changes

Perform synchronization with the latest data from the source machine.
Use this option if the source virtual machine is accessible.

Use latest available data

Skip data synchronization and use latest replication data on the target site.
Use this option if the source site is not available or the disks of the source virtual machine are corrupted.
