Cisco CISCO2911/K9 (revision 1.0) with 491520K/32768K bytes of memory.  
Processor board ID FTX152400KS  
3 Gigabit Ethernet interfaces  
DRAM configuration is 64 bits wide with parity disabled.  
255K bytes of non-volatile configuration memory.  
249856K bytes of ATA System CompactFlash 0 (Read/Write)

Type "no" and hit Enter twice on your keyboard

--- System Configuration Dialog ---

Would you like to enter the initial configuration dialog? [yes/no]: no

The advertisement features the GNS3 logo at the top, which consists of a stylized blue and purple fish-like creature. Below the logo, the text reads "GNS3®", "Version 2.2.5", and "Your Virtual Network in a Suitcase". A prominent blue button with the word "Download" is highlighted with a red box and a red circle containing the number "1". Below this, the text "For optimal performance" is followed by a link "Download VM for GNS3" which is also highlighted with a red box and a red circle containing the number "2". At the bottom, it states "Available for Windows, Linux & Mac."

```

Next-Hop

The PC wants to send a message to the server. Which path/route will the Cisco router choose?

Each path uses a unique routing protocol

Routing Protocol	Administrative Distance
Connected	0
Static	1
eBGP	20
EIGRP	90
OSPF	110
RIP	120
iBGP	200

Gateway of last resort is 10.2.1.5 to network 0.0.0.0

```

2.0.0.0/8 is variably subnetted, 2 subnets, 2 masks
C   2.2.2.0/24 is directly connected, GigabitEthernet0/0
L   2.2.2.2/32 is directly connected, GigabitEthernet0/0
10.0.0.0/8 is variably subnetted, 3 subnets, 2 masks
O   10.1.1.0/24 [110/2] via 10.2.1.5, 00:05:16, GigabitEthernet0/2

File Edit Format View Help
# Copyright (c) 1993-2009 Microsoft Corp.
#
# This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
#
# This file contains the mappings of IP addresses to host names. Each
# entry should be kept on an individual line. The IP address should
# be placed in the first column followed by the corresponding host name.
# The IP address and the host name should be separated by at least one
# space.
#
# Additionally, comments (such as these) may be inserted on individual
# lines or following the machine name denoted by a '#' symbol.
#
# For example:
#
#     102.54.94.97    rhino.acme.com        # source server
#     38.25.63.10   x.acme.com           # x client host

# localhost name resolution is handled within DNS itself.
#     127.0.0.1     localhost
#     ::1           localhost
```

```

# nessus Essentials

As part of the Nessus family, Nessus® Essentials (formerly Nessus Home) allows you to scan your environment (up to 16 IP addresses per scanner) with the same high-speed, in-depth assessments and agentless scanning convenience that Nessus subscribers enjoy. Nessus Essentials is restricted to personal and academic use only.

Please note that Nessus Essentials does not allow you to perform compliance checks or content audits, Live Results or use the Nessus virtual appliance. If you require these additional features, please purchase a [Nessus Professional](#) subscription.

Using Nessus Essentials for education? Register for Nessus Essentials through the [Tenable for Education](#) program to get started.

**VULNERABILITIES**

 <b>Basic Network Scan</b> A full system scan suitable for any host.	 <b>Advanced Scan</b> Configure a scan without using any recommendations.	 <b>Advanced Dynamic Scan</b> Configure a dynamic plugin scan without recommendations.	 <b>Malware Scan</b> Scan for malware on Windows and Unix systems.	 <b>Mobile Device Scan</b> Assess mobile devices via Microsoft Exchange or an MDM.	 <b>Web Application Tests</b> Scan for published and unknown web vulnerabilities.	 <b>Credentialed Patch Audit</b> Authenticate to hosts and enumerate missing updates.
 <b>Badlock Detection</b> Remote and local checks for CVE-2016-2118 and CVE-2016-0128.	 <b>Bash Shellshock Detection</b> Remote and local checks for CVE-2014-6271 and CVE-2014-7169.	 <b>DROWN Detection</b> Remote checks for CVE-2016-0800.	 <b>Intel AMT Security Bypass</b> Remote and local checks for CVE-2017-5689.	 <b>Shadow Brokers Scan</b> Scan for vulnerabilities disclosed in the Shadow Brokers leaks.	 <b>Spectre and Meltdown</b> Remote and local checks for CVE-2017-5753, CVE-2017-5715, and CVE-2017-5754.	 <b>WannaCry Ransomware</b> Remote and local checks for MS17-010.

**COMPLIANCE**

 <b>Audit Cloud Infrastructure</b> Audit the configuration of third-party cloud services.	 <b>Internal PCI Network Scan</b> Perform an internal PCI DSS (11.2.1) vulnerability scan.	 <b>MDM Config Audit</b> Audit the configuration of mobile device managers.	 <b>Offline Config Audit</b> Audit the configuration of network devices.	 <b>PCI Quarterly External Scan</b> Approved for quarterly external scanning as required by PCI.	 <b>Policy Compliance Auditing</b> Audit system configurations against a known baseline.	 <b>SCAP and OVAL Auditing</b> Audit systems using SCAP and OVAL definitions.

Remediations 2

History 1

**CRITICAL** VNC Server 'password' Password

**Description**

The VNC server running on the remote host is secured with a weak password. Nessus was able to login using VNC authentication and a password of 'password'. A remote, unauthenticated attacker could exploit this to take control of the system.

**Solution**

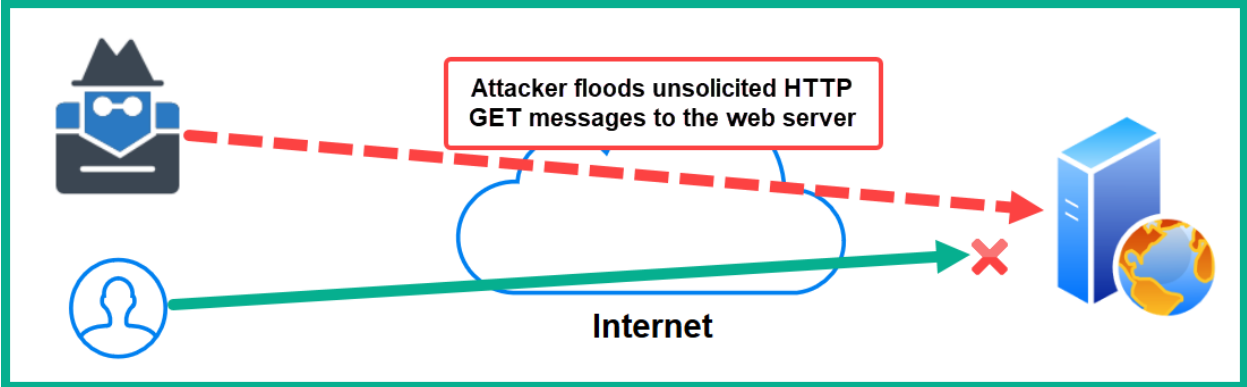

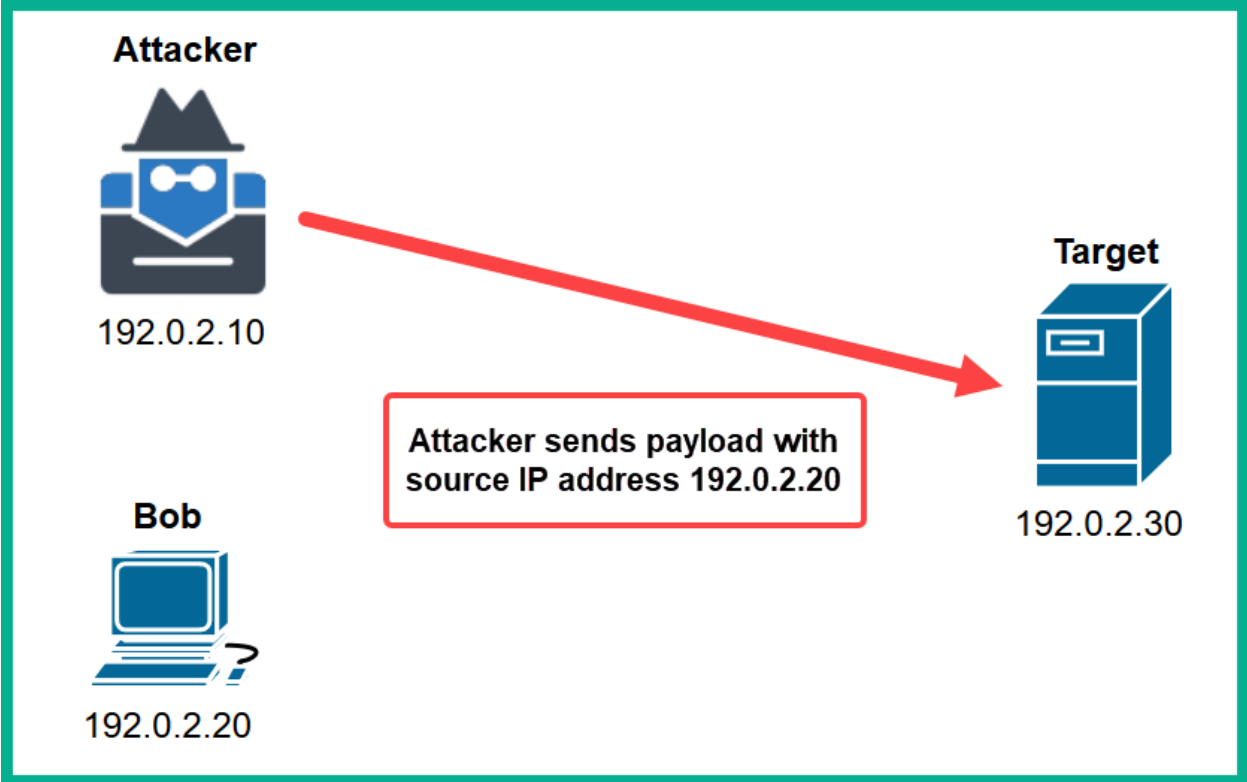

Secure the VNC service with a strong password.

**Output**

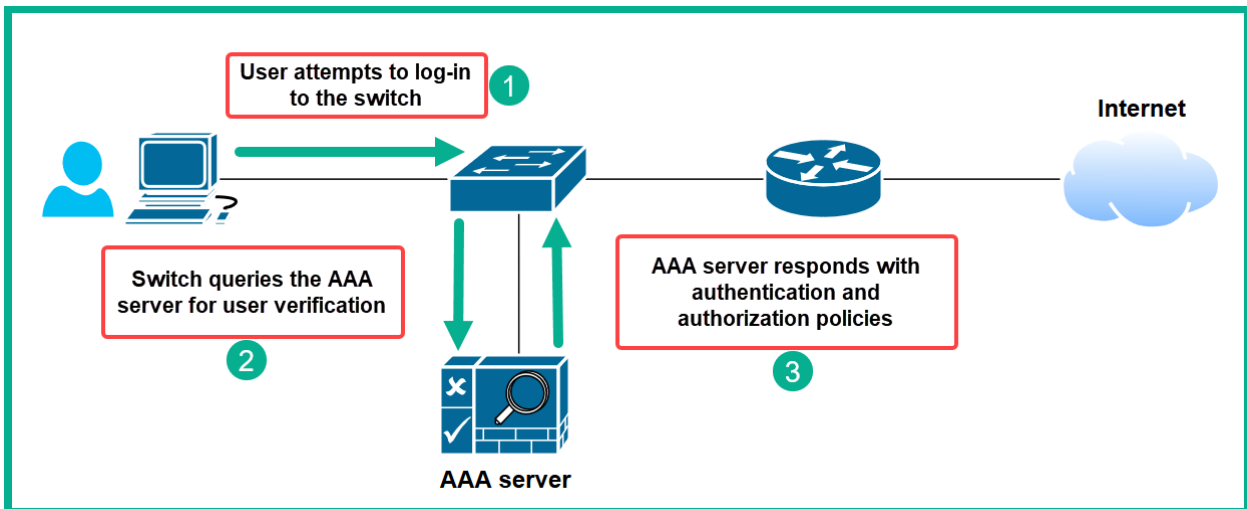

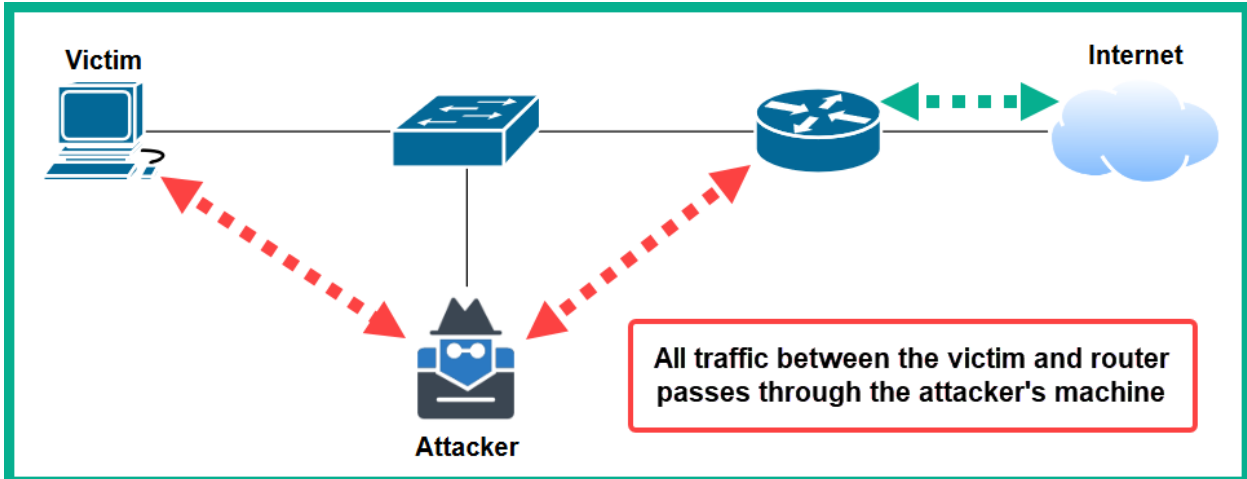

Nessus logged in using a password of "password".

Detailed description: This is a screenshot of a network device configuration interface. The 'Services' tab is active, and the 'FTP' service is selected in the left-hand menu. The main area shows the FTP service is turned 'On'. Under 'User Setup', a user named 'user1' with password 'password1' is configured with 'Write', 'Read', 'Delete', and 'List' permissions. A table below lists existing users: 'cisco' (password 'cisco', permissions 'RWDNL') and 'user1' (password 'password1', permissions 'RWDL'). At the bottom, a file list shows three files: 'asa842-k8.bin', 'asa923-k8.bin', and 'c1841.adm.services.k9-mz.124-15.T1.bin'. A 'Top' button is located at the bottom left.
