# Chapter 6: Managing APIs on Google Cloud Platform

## PetStore

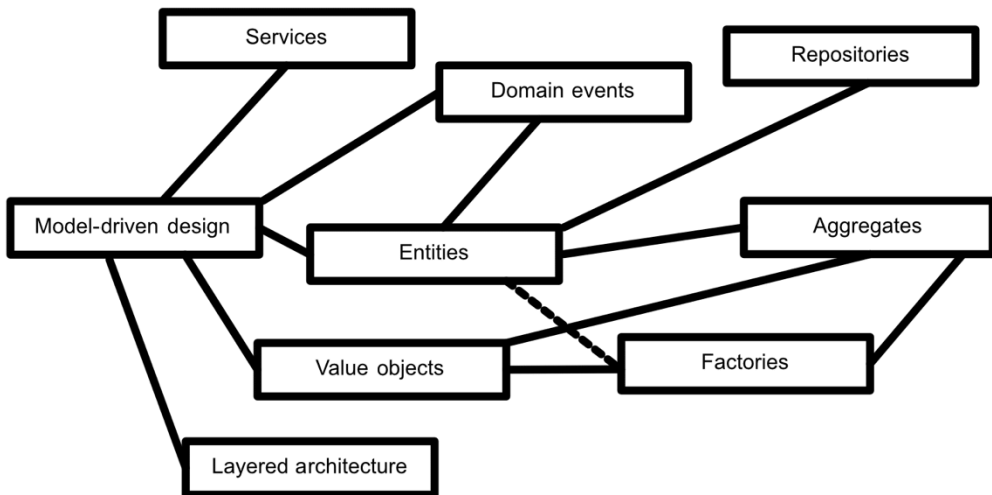

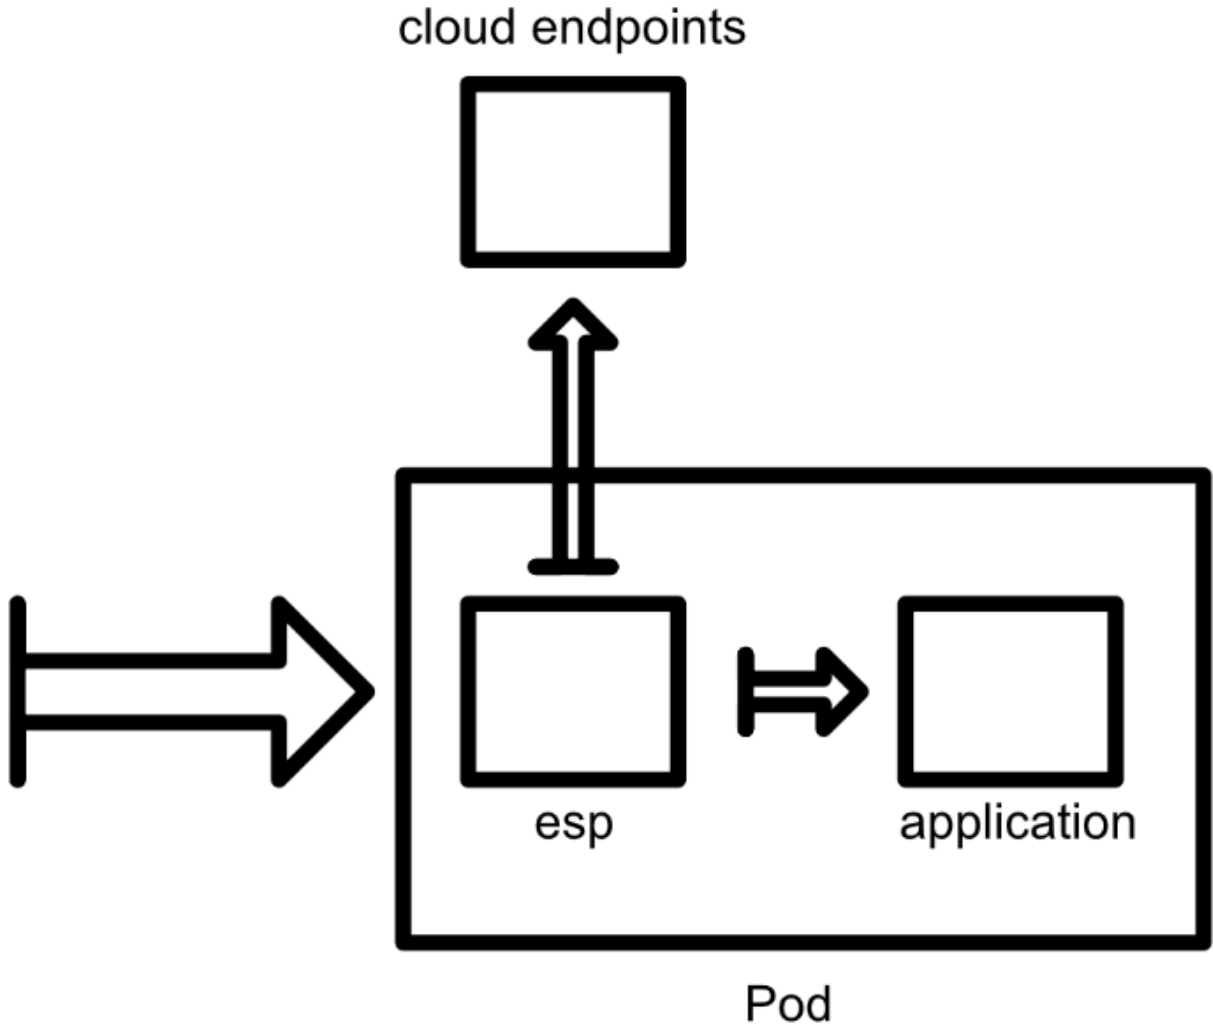

pet

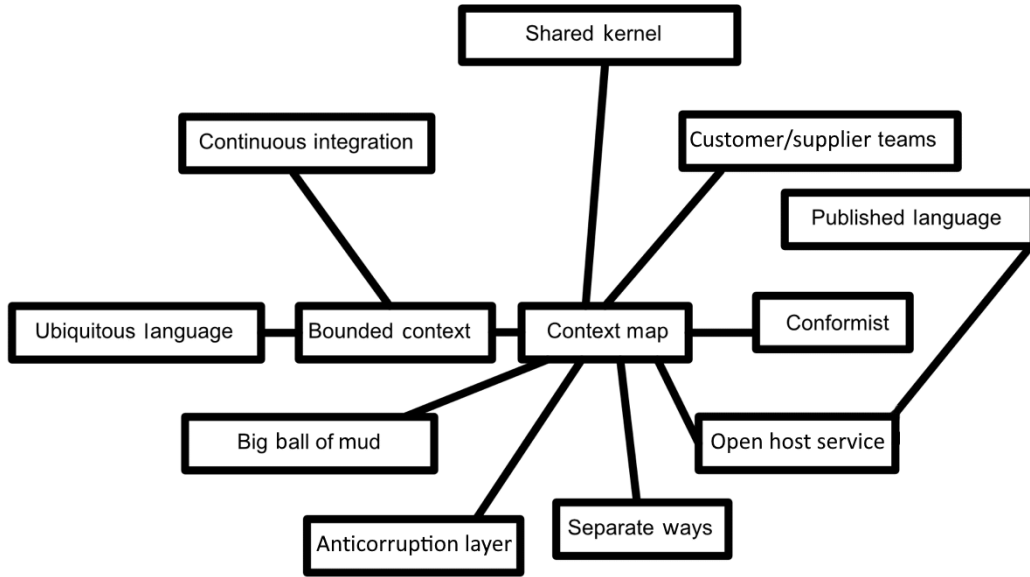

Show/Hide | List Operations | Expand Operations

GET	/api/pet
POST	/api/pet
DELETE	/api/pet/{id}
PUT	/api/pet/{id}

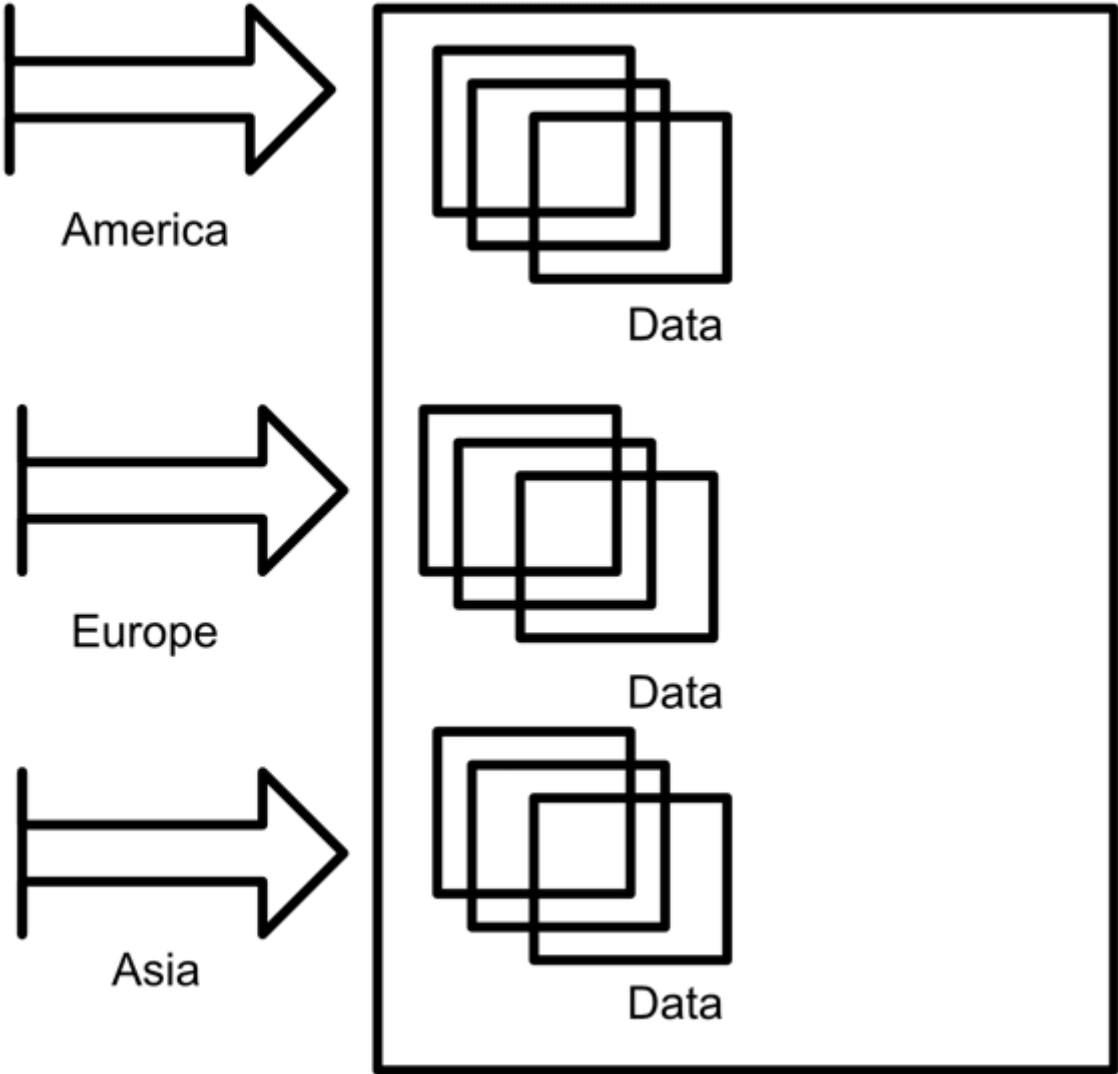

[ BASE URL: , API VERSION: v1 ]

The screenshot displays the Swagger Editor interface. On the left, a code editor shows the Swagger JSON definition for the Petstore API. The definition includes metadata such as version (2.0), title (Swagger Petstore), and license (Apache 2.0). It also defines several API paths: /pet (with POST, PUT, and GET methods), /pet/findByStatus (GET), and /pet/findByTags (GET). The right-hand side of the interface provides a visual overview of the API, including the title 'Swagger Petstore 1.0.0', a description, and a list of operations. The operations are color-coded: POST /pet (Add a new pet to the store), PUT /pet (Update an existing pet), GET /pet/findByStatus (Finds Pets by status), and GET /pet/findByTags (Finds Pets by tags). An 'Authorize' button is visible in the top right corner of the visual interface.

Database version \*  
MySQL 8.0

### Summary

Region	us-central1 (Iowa)
DB Version	MySQL 8.0
vCPUs	1 vCPU
Memory	3.75 GB
Storage	100 GB
Network throughput (MB/s)	250 of 2,000
Disk throughput (MB/s)	Read: 48.0 of 240.0 Write: 48.0 of 72.0
IOPS	Read: 3,000 of 15,000 Write: 3,000 of 4,500
Connections	Public IP
Backup	Automated
Availability	Single zone
Point-in-time recovery	Enabled

### Choose region and zonal availability

For better performance, keep your data close to the services that need it. Region is permanent, while zone can be changed any time.

Region  
us-central1 (Iowa)

- Single zone  
In case of outage, no failover. Not recommended for production.
- Multiple zones (Highly available)  
Automatic failover to another zone within your selected region. Recommended for production instances. Increases cost. Enables binary logs (required for replication) and automatic backups. Make sure your storage can support at least 7 days of logs.

▼ SPECIFY ZONES

### Customize your instance

You can also customize instance configurations later
