

Chapter 1: Introduction to Robotics

Chapter 2: Exploring Robot Building Blocks – Code and Electronics

1. The Chassis
This is the robot's body.

2. Castor Wheel
Used for balance.

3. Wheels
Used for balance.

4. Drive Motors
Make the robot move.

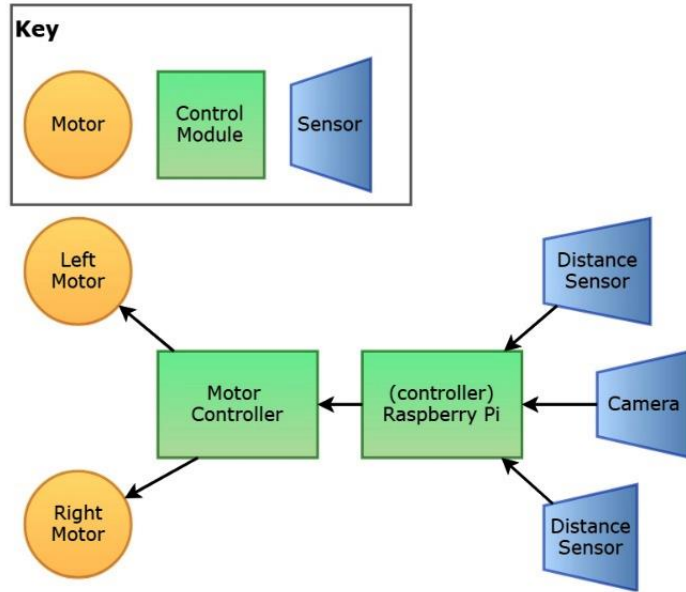

5. Motor Controller
Connects motors to the Raspberry Pi.

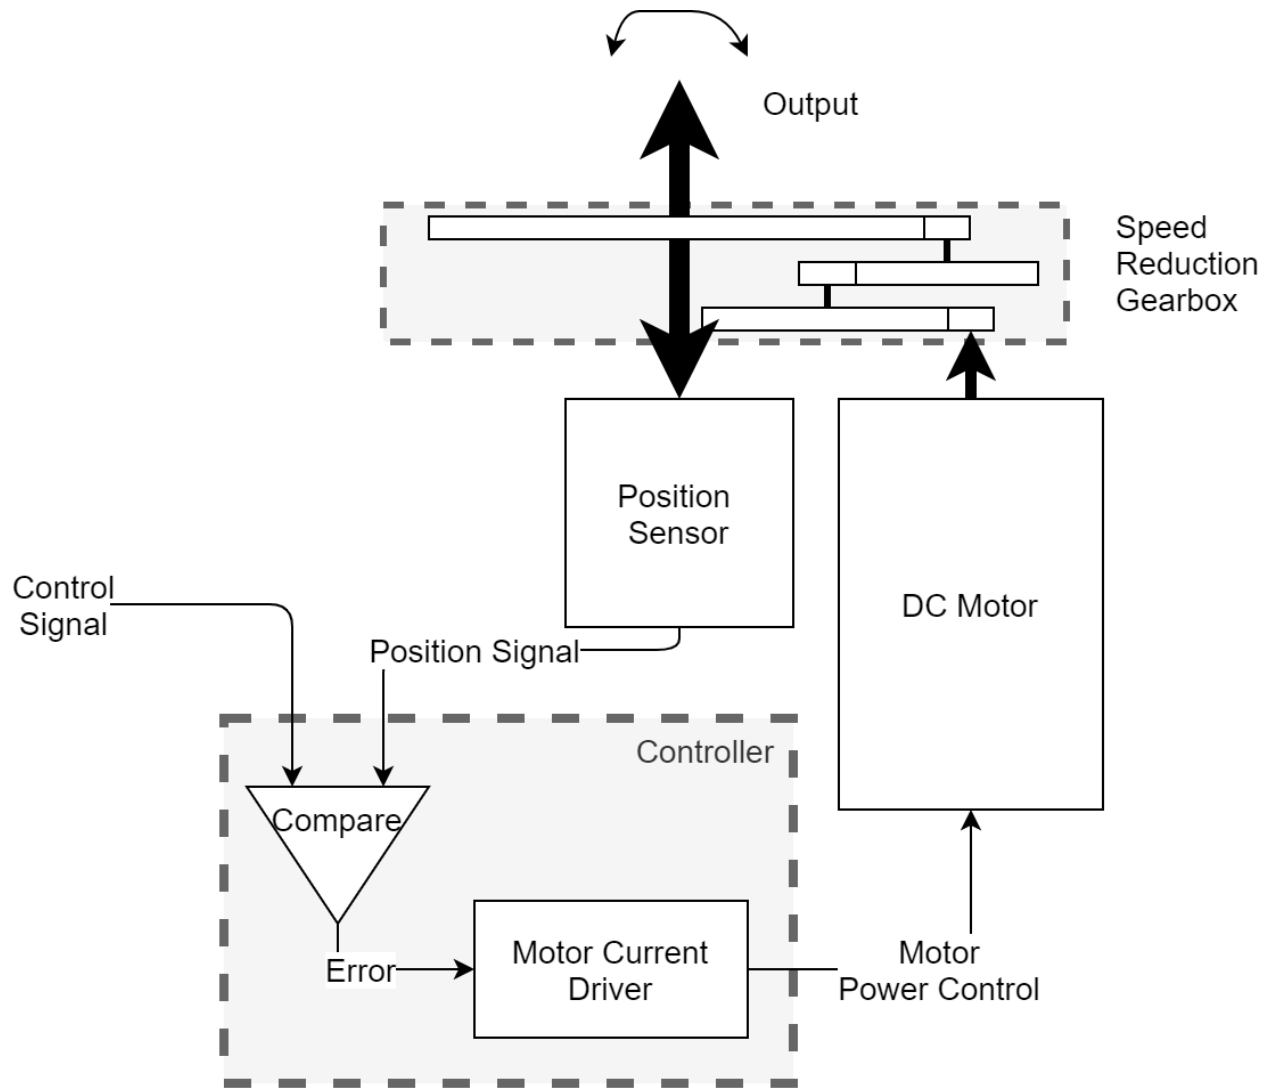

6. The Controller
The Raspberry Pi, the brain of this robot.

7. Power
Batteries serve as the power source for the robot.

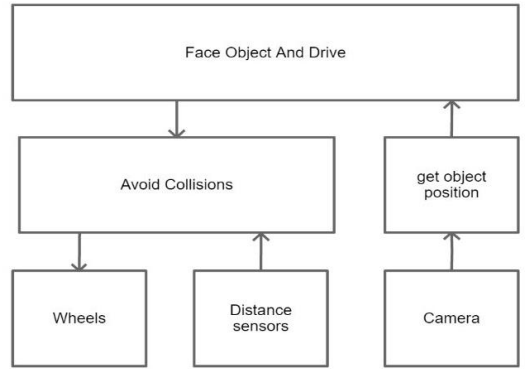

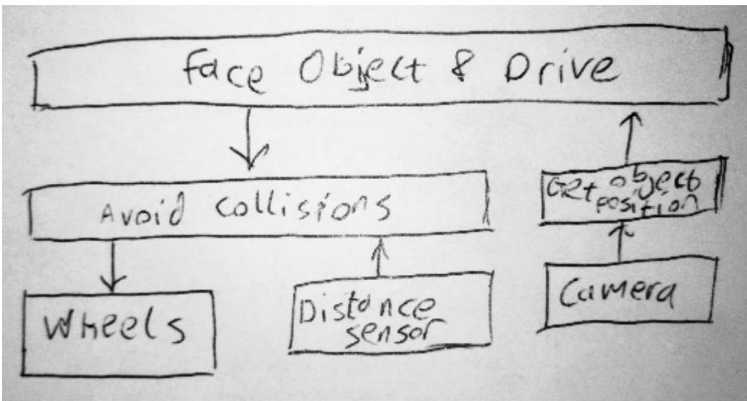

9. Debug
Lights to indicate specific problems.

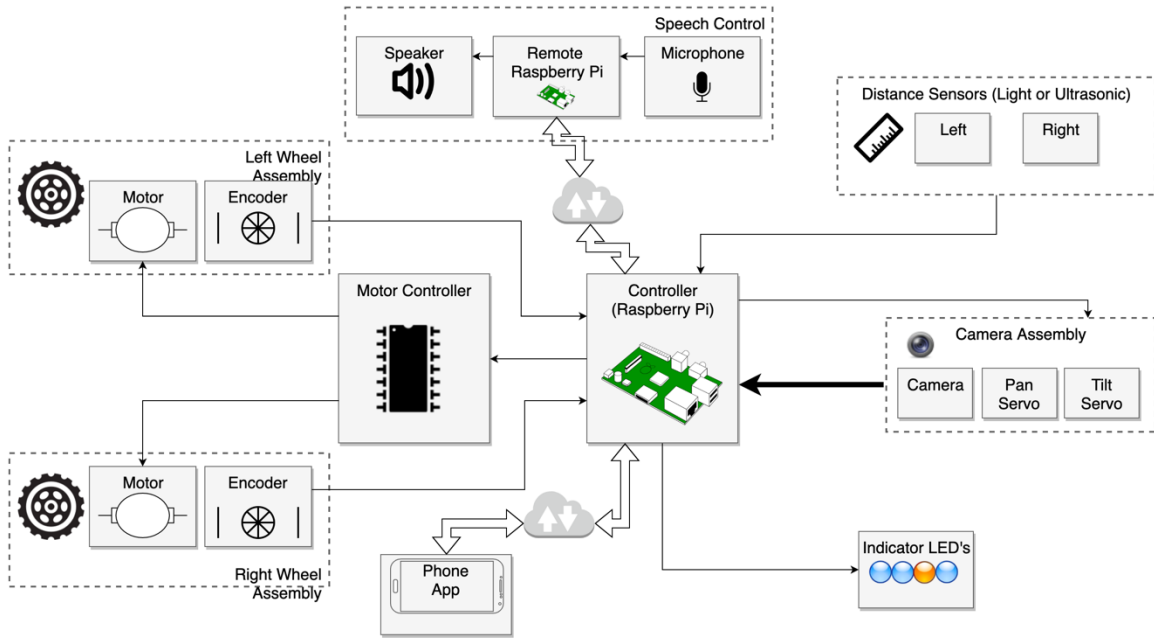

8. Sensors (such as the camera)
Measure distance, speech, and so on to help the robot react to stimuli.

Chapter 3: Exploring the Raspberry Pi

Download for macOS

[Download for Windows](#)

[Download for Ubuntu for x86](#)

To install on **Raspberry Pi OS**, type
`sudo apt install rpi-imager`
in a Terminal window.

Chapter 7: Drive and Turn – Moving Motors with Python

①

Path-following
behavior mixed
with setup and
motor control

②

Chapter 8: Programming Distance Sensors with Python

1. Pulse Fired - "Ping"

A pulse of light or sound is fired from the sensor.

2. Pulse Reflected - "Pong"

A pulse of light or sound is reflected.

3. Time Calculated

The time for the pulse to go out and return will vary based on the distance.

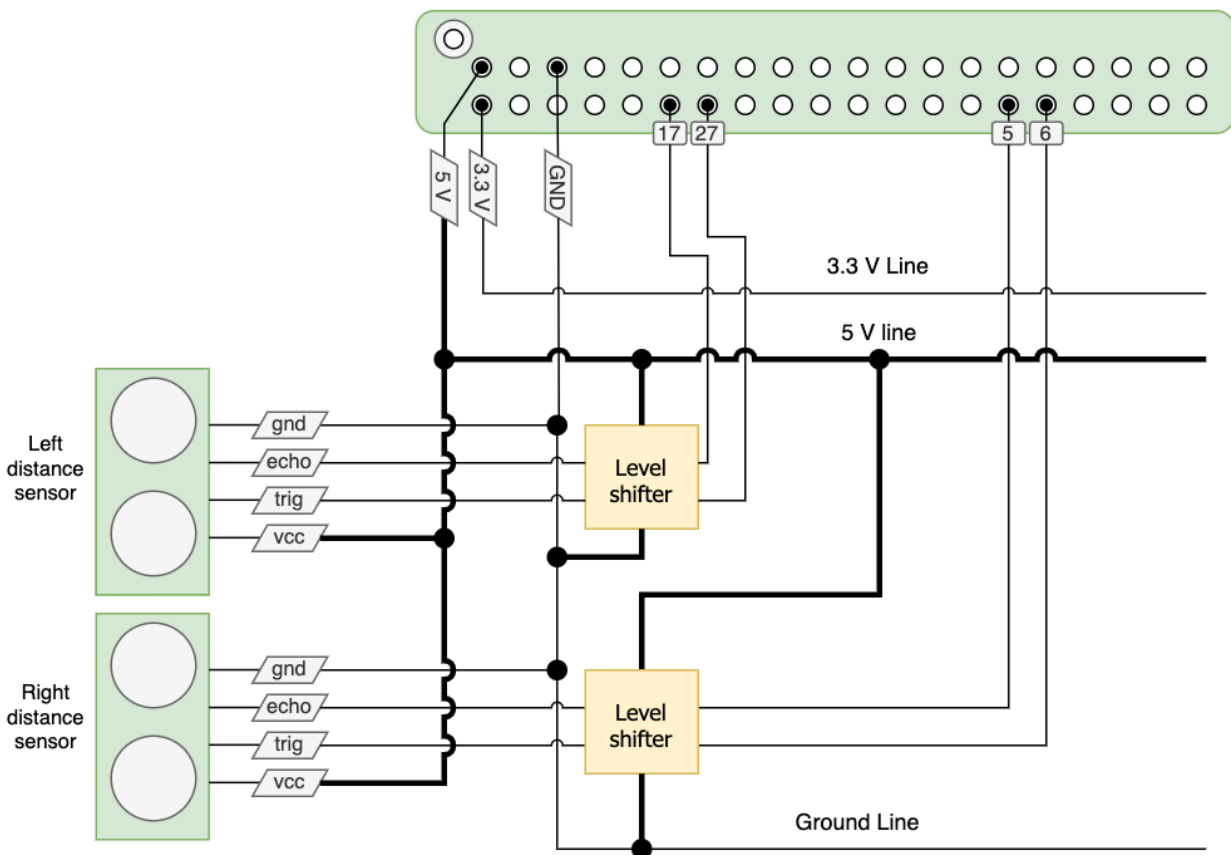

4. Distance Calculated

Using the speed of light, or sound with the return time, gives a distance.

Raspberry Pi GPIO

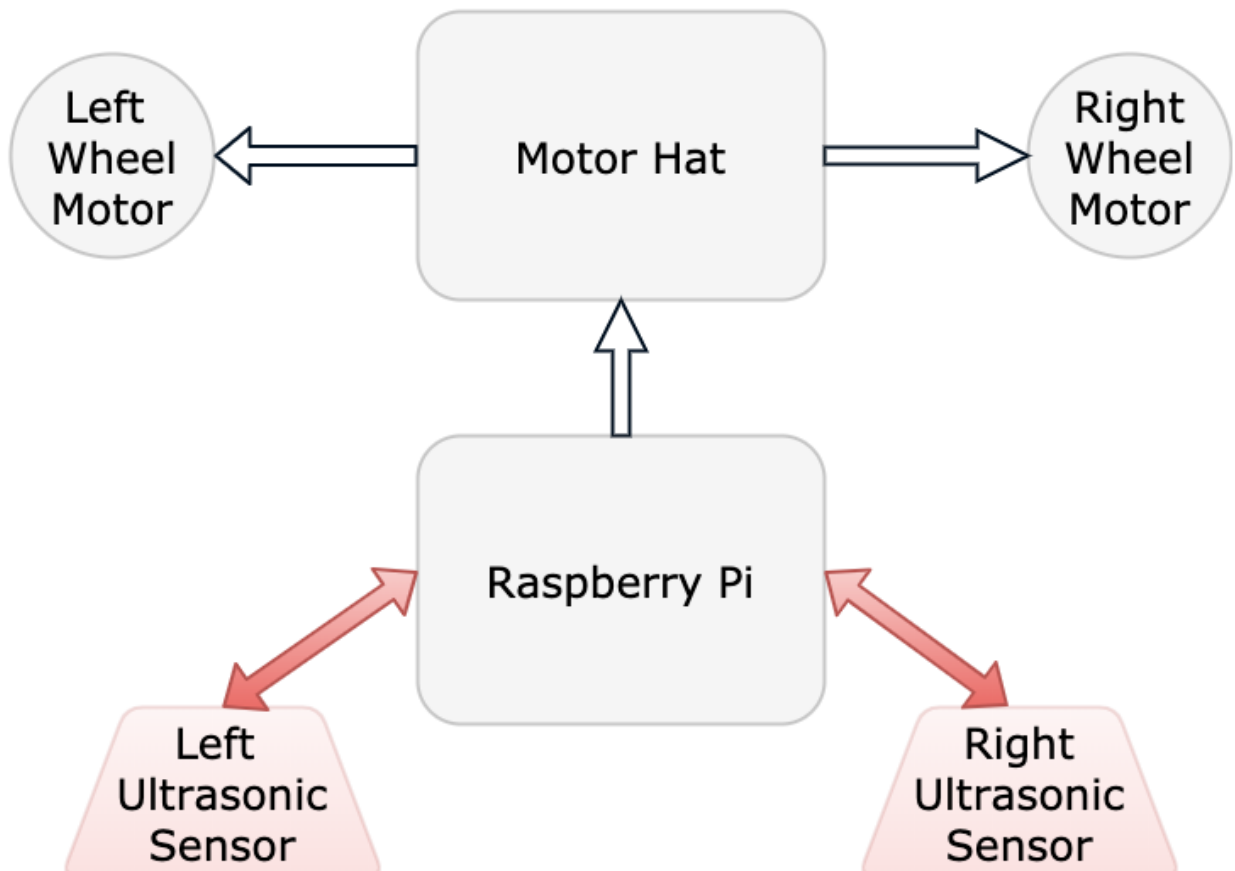

1. Forward Single Sensor

Robot can avoid the wall in front.

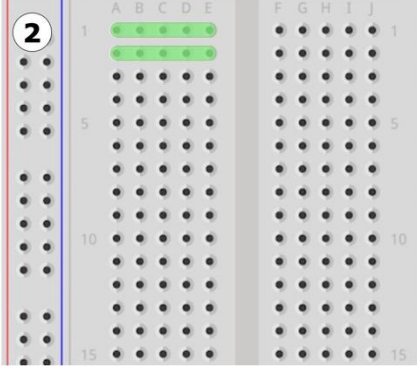

2. Two Sensors

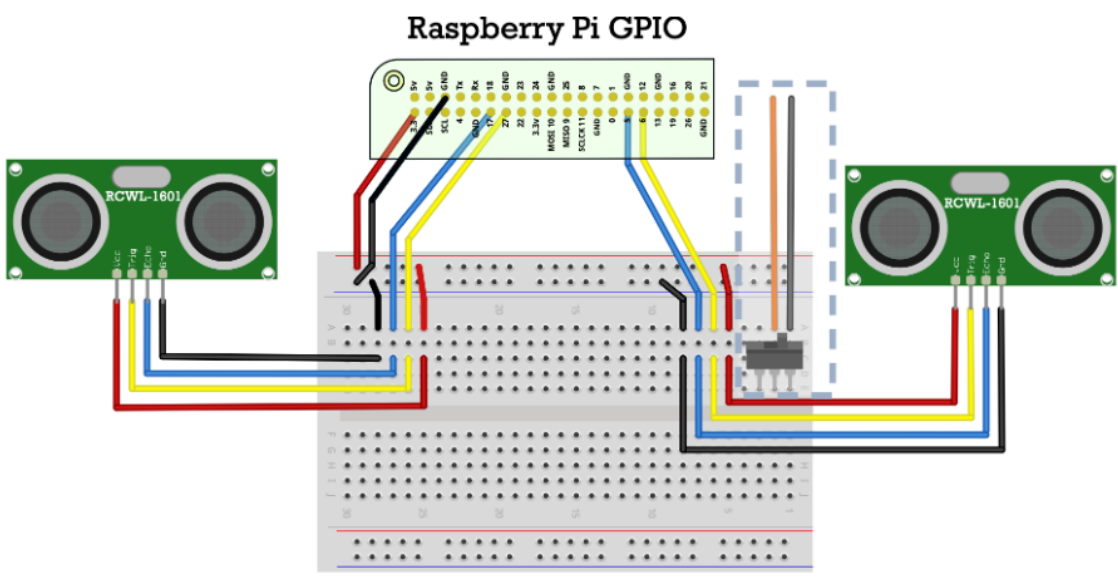

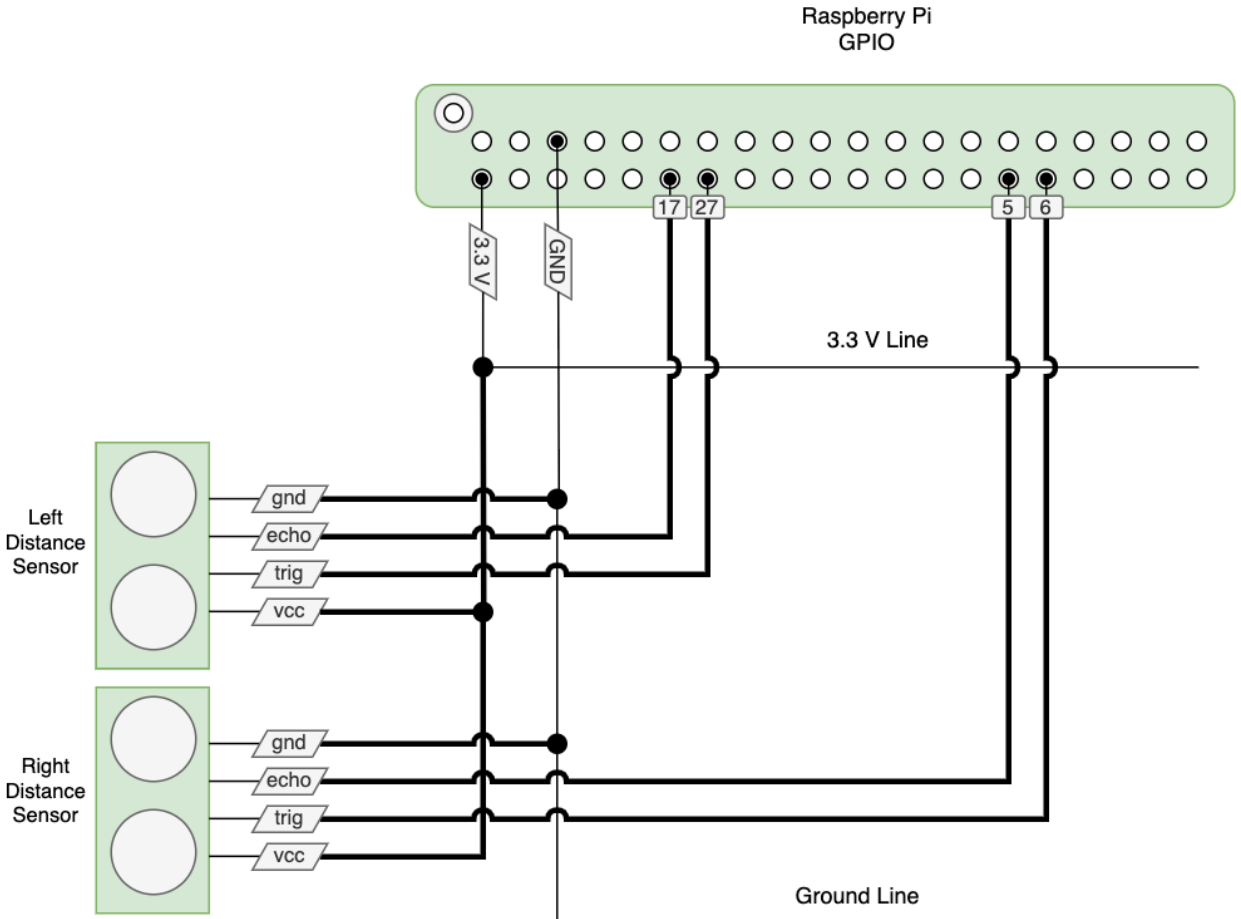

Robot can avoid front and left wall.
