Chapter 4: Using REST and Thrift APIs to Manage Switches

Chapter 5: Using Postman for REST API Calls

Calls

The screenshot shows a Postman interface for a GET request to `http://10.7.1.78:8080/public/v1/config/Ports`. The request is configured with "No Auth" and has 3 headers. The response status is 200 OK, with a time of 270 ms and a size of 62.83 KB. The response body is displayed in JSON format:

```
1 {
2   "MoreExist": false,
3   "ObjCount": 160,
4   "CurrentMarker": 0,
5   "NextMarker": 0,
6   "Objects": [

Quick Start

HELP

The **Quick Start** section on this page assists you in performing common and basic procedures. Click the icons for step-by-step instructions and for available concept documentation.

Caution: Cisco recommends that you do not mix configuration modes (Advanced or Basic). When you make a configuration in either mode and change the configuration using the other mode, unintended changes can occur. For example, if you apply an interface policy to two ports using Advanced mode and then change the settings of one port using Basic mode, your changes might be applied to both ports.

The **See Also** section provides links to QuickStart pages, which assist you in locating configuration menus related to common procedures.

For additional assistance, see the APIC documentation and the following applications in the See Also links:

- **ACI Concepts**—This link provides a detailed overview of the fundamental concepts of the ACI fabric and APIC.
- **API Inspector**—Using this built-in tool of APIC, you can capture API messaging as you perform tasks in the APIC GUI. The captured messages provide examples of the API operation that you can use to develop external applications that will use the API.
- **APIC Management Information Model Reference**—This tool provides detailed information about all object classes in APIC, including properties and hierarchy. In addition, the tool provides a listing of faults, events, and system messages.

Quick Start

The following procedures are useful in getting started:

First setup for the ACI fabric		
Initialize the ACI fabric		
Configure user accounts		
Connect to a virtual machine (VM) management system		
Add a tenant		
Deploy an application profile		
Deploy L4-L7 services using a service graph		
Monitor fabric port, access port, or EPG statistics		
Troubleshoot connectivity between two endpoints

The image shows a REST client interface. At the top, there is a browser-like tab with the URL 'https://10.10.10.1/api' and a plus sign to add more tabs. To the right of the tab is a dropdown menu set to 'No Environment' with a downward arrow, and two icons: an eye and a gear. Below the tab is a large input field containing the HTTP method 'GET' with a dropdown arrow, followed by the URL 'https://10.10.10.1/api/class/fvTenant.xml'. To the right of the URL are three buttons: 'Params', 'Send' (highlighted in blue), and 'Save' with a dropdown arrow. Below this is a horizontal menu with tabs: 'Authorization' (underlined in red), 'Headers', 'Body', 'Pre-request Script', and 'Tests'. On the far right of this menu are the words 'Cookies' and 'Code' in red. Below the menu is a section for 'Type' with a dropdown menu currently set to 'No Auth'.

Chapter 9: Where to Start When Building a Next Generation Network

Core & SDDC Services Switch

Engineering Request for Information
(RFI)

Customer is seeking responses for two classes of switching solutions:

1. Core Services

A service-provider, carrier-grade platform supporting multiple interfaces and the ability to forward switched and routed packets at very high data rates. Additionally, it must support various routing protocols and network service delivery mechanisms. Must include high availability and resiliency features and best-in-class manageability and health visibility.

2. SDDC Services

A service-provider, carrier-grade platform supporting multiple interfaces and the ability to forward, filter and modify switched and routed local and PoD specific packets and streams (IPv4 and IPv6) at very high data rates. It also includes but is not limited to, the termination of VXLAN based services, appliances, storage devices, etc. Must include high availability and resiliency features and best-in-class manageability and health visibility.

Core & SDDC Services Switch - Engineering Request for Information (RFI)

I. Description / Objectives:

1. This request for information (RFI) is being issued by Customer's Engineering and Technology Team. Material contained within represents requirements from both Engineering and Customer's Network Management Department. Review and evaluation of submitted material will likewise be conducted by both the Engineering and Network Management teams.
2. It is understood that there may have been (or is currently underway), similar RFI/RFQ/RFP/etc. exercises originating from other departments within Customer. This particular request should be viewed (and completed) independently of said exercises. That said, information gleaned from the response to this request may be used in conjunction with prior/concurrently submitted material.
3. Customer is actively looking to quantify and qualify various capabilities of switches and switching solutions.
4. Customer is actively looking to understand the availability and timelines of switches and switching devices/solutions that meet specific criteria.
5. Customer is actively looking to understand the licensing and fee model(s) associated with switches and switching devices/solutions.
6. Customer is actively looking at various switch architectures and deployment models.
7. No assumption should be made with respect to differentiating various deployment models. That said, Customer is looking for two solutions. **One that is appropriate for servicing the "core" of a network and a second that is appropriate for SDDC services.** Respondents may submit different products/solutions to satiate the different requirements outlined immediately above. Respondents may also submit a single product/solution if they feel it well suited in either or both applications; please indicate as such.
It is expected and required that respondents will submit a SEPARATE and DISCRETE WORKSHEET (Response Section "B") for each product / solution presented (e.g. one for a core switching solution and another for a SDDC switching solution).
8. The information contained within this RFI (plus all associated attachments, articles, appendices, etc.) and the responses thereto are to be considered confidential and under non-disclosure. This material is intended only for the person(s) or entity to which it is addressed and may contain proprietary information, which is privileged, confidential, or subject to copyright belonging to Customer. Any review, retransmission, dissemination or other use of, or taking of any action in reliance upon, this information by persons or entities other than the intended recipient is prohibited.
9. No contract will be awarded as a result of this RFI. This RFI does not in any way constitute a contractual obligation on the behalf of either party.
10. Customer shall not incur any obligation, liability, or cause of action whatsoever by reason of this RFI or any actions or inactions relative hereto. Respondents are solely responsible for all expenses associated with preparing and responding to this RFI. All RFI responses shall become the property of Customer and will not be returned to respondents.
11. Customer may, at its sole discretion, issue a follow-up Request for Proposal ("RFP") to some or all of the RFI respondents. Customer shall have no obligation to issue a follow-up RFP to any RFI respondent.
12. Customer is committed to a policy of nondiscrimination in its vendors, contractors and other suppliers. All qualified vendors, contractors and suppliers are reviewed without regard to race, color, religion, sex, national origin, ancestry, age, marital or veteran status, sexual orientation/ preferences or non-disqualifying physical or mental handicaps.

Core & SDDC Services Switch - Engineering Request for Information (RFI)

II. Instructions / Response Sections:

- A. Respondent must include a one-page, executive-summary style descriptive outlining key differentiators of the submitted product/solution.
- B. Respondent must complete the "Respondent Section" of the attached requirements worksheet in its entirety.
- A separate worksheet should be filled out for each viable product/solution submitted for consideration.
 - No assumptions should be made regarding the network architecture in which the respondent's product/solution will be placed/integrated.
 - The approximate retail "street" price must be included for each unit involved in the solution. No assumption of discounts should be made.

Capability field of the worksheet should be completed using the following values:

- **"5"** - Submitted product/solution **fully delivers** required functionality today.
- **"4"** - Submitted product/solution **can** fully deliver required functionality with only minor changes needed (< 1 month development time).
- **"3"** - Submitted product/solution **can** fully deliver required functionality with 1 - 3 months development time.
- **"2"** - Submitted product/solution **can** fully deliver required functionality with 4 - 8 months development time.
- **"1"** - Submitted product/solution **can not** deliver required functionality **but** there is a product roadmap to do so (future hardware platform, etc.).
- **"0"** - Submitted product/solution **can not** deliver required functionality nor is there a product roadmap to do so.
- **"NA"** - Required functionality is not applicable to the submitted product/solution

Notes:

- *Please use the "Notes" field to provide relevant details pertaining to the product or solution's ability to deliver required functionality.*
- *Please use the "Notes" field to describe capabilities that may exist above and beyond the required functionality.*
- *If capability "1" is used, please use the "Notes" field to indicate the timeframe and details surrounding the product/solution roadmap.*
- *If any amount of development time is needed to satiate the requirement, please use the "Notes" field to detail motivators:*
 - *NRE*
 - *Quantity commitments*
 - *Financial commitments*
 - *Etc.*

IPv4 and IPv6 fields should be completed as follows:

- **"Yes"** - Submitted product/solution **IS** fully "aware" and capable as it relates to the referenced protocol and to the stated line item.
- **"No"** - Submitted product/solution **IS NOT** fully "aware" and capable as it relates to the referenced protocol and to the stated line item.
- **"NA"** - The referenced protocol is not applicable or relevant to the stated line item.
- **"Notes"** - Submitted product/solution may be partially "aware" and capable as it relates to the referenced protocol and to the stated line item.
Please use the "Notes" field to provide relevant details and/or time lines associated with full compatibility

B/L field of the worksheet should be completed as follows:

- **"B"** - Capability is included as a "base" feature; no additional licencing fees, procedural costs, labor fees or other financial dependencies are needed to enable or leverage the capability.
- **"L"** - Capability is available. However, additional licencing fees, procedural costs, labor fees or financial dependencies are needed to enable or leverage the capability.

- C. Respondent must include and attach relevant product literature, specification sheets and diagrams with their submission(s).
- D. Respondent must include a full list of protocols of which the solution is capable of routing and on which it can operate and report.
- E. Respondent must include a description of both the process and fee structure associated with inserting a new feature request into the development queue.
- F. A relevant, itemized example pricing worksheet for the suggested solution (with clearly noted assumptions), must be included.

NOTES

CUSTOMER REQUIREMENTS

ITEM NO.	CATEGORY	DESCRIPTION
FOUNDATIONS - PHYSICAL & PERFORMANCE		
1	Physical	Please detail physical dimensions and weight of all included components and indicate ability to rack-mount said equipment
2	Physical	Please detail redundancy schemes available for the network and redundant components within the device
3	Physical	N+1 and 1+1 redundancy capabilities (switch fabric, fan, power, etc)
4	Physical	Please document what management and craft interface are available on the platform
5	Physical	Please document solution's MTBF (mean time between failure) and MTTR (mean time to repair)
6	Physical	Support for AC or -48 volt DC power. Please document start-up and operating amperages & how the number and type of cards influence the power requirements of the solution.
7	Physical	Support for redundant power supplies (indicate how many)
8	Physical	NEBS (network equipment-building system design guidelines) Level 3 certification
9	Physical	Support for 10GigE interfaces (indicate port/card density and how many total supported in each box and across a pair/cluster). Please also indicate whether the ports are "blocking" or non-blocking
10	Physical	Support for GigE interfaces (indicate port/card density and how many total supported in each box and across a pair/cluster)
11	Physical	Port support for: 1 Gbps (gigabit per second)
12	Physical	Port support for: 10 Gbps
13	Physical	Port support for: 40 Gbps (if not present today, please detail roadmap and time line. Also please describe what dependencies are required: e.g. upgrades to power supplies, augmentation or replacement of route processor modules, etc.)
14	Physical	Port support for: 100 Gbps (if not present today, please detail roadmap and time line. Also please describe what dependencies are required: e.g. upgrades to power supplies, augmentation or replacement of route processor modules, etc.)
15	Physical	Port support for: Logical (Null, Loopback, sub-interface, pseudo) (please detail)
16	Physical	Please detail plans for terabit forwarding / switching capabilities
17	Physical	Please document all available, supported physical interfaces and speeds
18	Physical	Please detail the number of interface slots available and the available throughput per slot. Also please indicate if oversubscription is present and if so, please detail how this oversubscription is architected/handled.
19	Physical	Please detail the maximum number of interfaces that can be operational in the switch
20	Physical	Please detail any constraints on mixing different interface types in the switch
21	Physical	Please detail any constraints on the number of operational interfaces due to addition of router resilience/redundancy features
22	Physical	Please detail whether any type of interface restricts or limits the features supported by the router. Are particular features (QoS (quality of service), multicast, IPv6 Access Control Lists, GRE (generic routing encapsulation), etc.) restricted to, or limited by particular interfaces?

56	Performance	Ability to support software upgrades without impacting the deployed solution and with no subscriber traffic or state being lost (hit-less upgrades) (e.g. ISSU or In Service Software Upgrade)		NA	NA		
57	Performance	Ability to support hardware upgrades without impacting the deployed solution and with no subscriber traffic or state being lost		NA	NA		
58	Performance	Please detail which hardware components in the router may be hot swapped, which may not, and the impact on the router, and on packet forwarding of controlled and uncontrolled hot swapping.		NA	NA		
59	Performance	Please indicate and detail any other mechanisms, apart from redundancy, that enhance the overall reliability of the proposed router/solution					
60	Performance	"Feature Blades" - Please detail and describe available blades and their purpose/capabilities		NA	NA		
61	IPv6	IPv6 hardware compatibility		NA	Yes		
SOFTWARE / ROUTING / POLICY DECISION & ENFORCEMENT / TRAFFIC MANAGEMENT							
62	General	Possess any embedded, included or underlying technologies and/or features that would permit derivative financial gain by the enablement thereof (please explain)					
63	IP Routing	IPv4 and IPv6 services and routing protocols (please detail supported service and protocols)					
64	Security	Modular operating system (please detail specific available modules if applicable)		NA	NA		
65	MPLS	MPLS (Multi-Protocol Label Switching) forwarding		NA	NA		
66	MPLS	MPLS L3 (layer 3) VPN					
67	MPLS	MPLS L2 (layer 2) VPN		NA	NA		
68	MPLS	MPLS TE (Multi-Protocol Label Switching Traffic Engineering)					
69	MPLS	MPLS-Label Distribution Protocol (MPLS-LDP)		NA	NA		
70	General	Ability to terminate MPLS Pseudo-wires into VPLS (virtual private LAN service) instances					
71	General	VPLS & LSP (label switch path) ping to isolate fault in the core					
72	General	L3VPN (please detail supported protocols)					
73	General	L2VPN (please detail supported protocols)					
74	General	L2 Circuits					
75	General	PPP encapsulation		NA	NA		
76	General	HDLC (High-Level Data Link Control) encapsulation		NA	NA		
77	General	Frame Relay encapsulation		NA	NA		

Chapter 10: Designing a Next Generation Network

 Cisco Power Calculator

For explanation of following terms, click [Tutorial/Q&A](#)
 Note: After 30 minutes of inactivity, the sessions will be timed out and the calculator will reset to the start page.

Product Family

Chassis	N9K-C9504
Supervisor Engine	N9K-SUP-B
Redundant Supervisor Engine	NO
System Controller	N9K-SC-A
Redundant System Controller	YES
Fantray	N9K-C9504-FAN
Fabric Module	N9K-C9504-FM
How many Fabric modules?	3
Input Voltage	200-240 Volts AC
	Next >>

Quick Facts

Selected Chassis	N9K-C9504
Selected Supervisor Engine	N9K-SUP-B
Selected System Controller	N9K-SC-A
Selected Voltage	200-240 Volts AC
Selected Fantray	N9K-C9504-FAN
Selected Fabric Module	N9K-C9504-FM
Selected Number of Fabric Modules	3
Chassis Slots	4

Power Consumption/Heat Dissipation Summary			
Slot	Line Card		
1	N9K-X9636PQ		
2	N9K-X9564PX		
3	--EMPTY-SLOT--		
4	--EMPTY-SLOT--		
Minimum Power Supply		Percentage Of Power Used	
Single N9K-PAC-3000W-B in Combined mode		59.68 %	
		<div style="width: 59.68%; height: 10px; background-color: #4caf50;"></div>	
First Alternative Power Supply		Percentage of Power used	
Dual N9K-PAC-3000W-B in Combined mode		29.85 %	
		<div style="width: 29.85%; height: 10px; background-color: #4caf50;"></div>	
Total Output Current	Total Output Power	Total Typical Output Power	Total Heat Dissipation
8.14 Amps	2380.00 Watts	1723.00 Watts	7850.30 BTU/Hr

Chassis	N9K-C9504
Supervisor Engine	N9K-SUP-B
Redundant Supervisor Engine	NO
System Controller	N9K-SC-A
Redundant System Controller	YES
Fantray	N9K-C9504-FAN
Fabric Module	N9K-C9504-FM-E
How many Fabric modules?	4
Input Voltage	200-240 Volts AC

6	N9K-X9732C-EX		
7	N9K-X9732C-EX		
8	N9K-X9732C-EX		
Minimum Power Supply		Percentage of Power Used	
Three N9K-PAC-3000W-B in Combined mode		77.54% <div style="width: 77.54%; height: 10px; background-color: green;"></div>	
First Alternative Power Supply		Percentage of Power Used	
Four N9K-PAC-3000W-B in Combined mode		58.15% <div style="width: 58.15%; height: 10px; background-color: green;"></div>	
Total Output Current	Total Output Power	Total Typical Output Power	Total Heat Dissipation
31.72 Amps	10128.00 Watts	6874.00 Watts	36999.53 BTU/Hr

CISCO SDN Cost Comparison

Breakdown of \$11,393,587 Savings

■ Network ■ VMware Licenses
■ Cisco ONE Enterprise Licenses ■ Servers (for VM and NSX Edge if required)

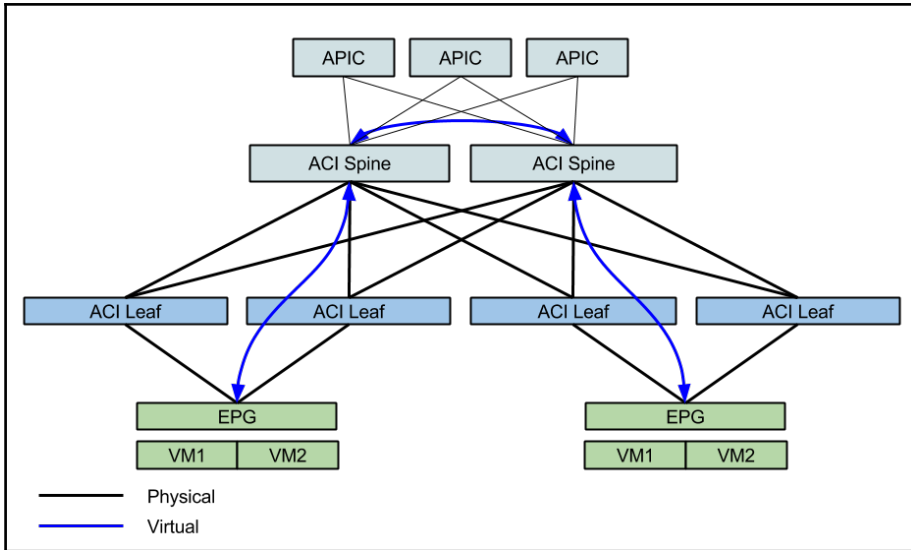

SDN Cost Comparison Results

	● Cisco ACI Design	● NSX with Third Party Underlay	Cisco ACI Savings	Cisco ACI Savings, %
● Network (switches, transceivers and SDN licenses)	\$787,784	\$6,660,076	\$5,872,292	88.17%
● VMware vCloud Suite or vSphere Enterprise+ licenses	\$0	\$0	\$0	0.00%
● Cisco ONE Enterprise Licenses	\$0	\$0	\$0	0.00%
● Servers (for VM and NSX Edge if required)	\$2,821,818	\$8,343,112	\$5,521,295	66.18%
Total	\$3,609,601	\$15,003,188	\$11,393,587	75.94%

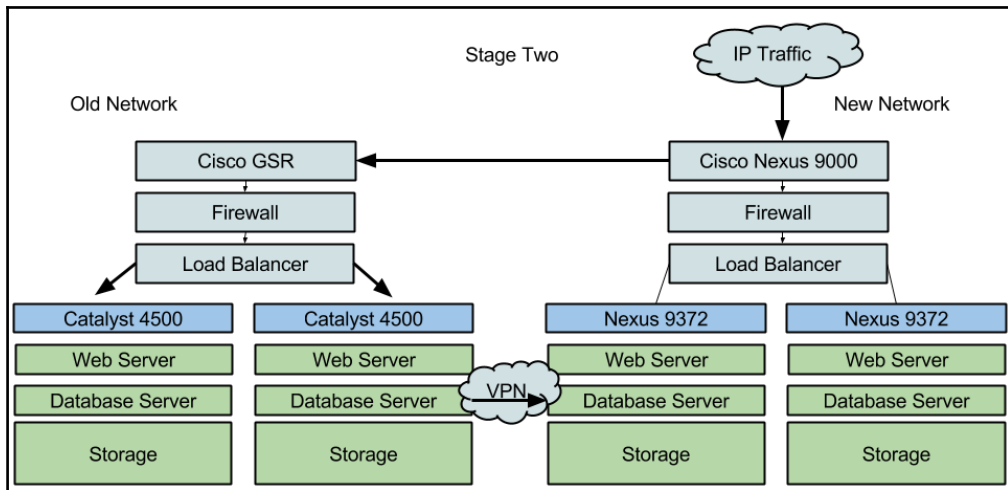

Simulation with 2,500 VM, 5 vCenter, 15 tenants and 28:1 oversubscription to the WAN (1 year) TCO
