The image shows the simulator toolbar and metrics panel. The toolbar contains icons for navigation (list, zoom, back/forward), device selection (iPhone, iPad, iPod), and other actions (help, zoom, zoom in, zoom out, next). Below the toolbar is the "Simulated Metrics" section, which includes dropdown menus for Size (iPhone 4.7-inch), Orientation (Inferred), Status Bar (Inferred), Top Bar (Inferred), and Bottom Bar (Inferred).

| Simulated Metrics |                 |
|-------------------|-----------------|
| Size              | iPhone 4.7-inch |
| Orientation       | Inferred        |
| Status Bar        | Inferred        |
| Top Bar           | Inferred        |
| Bottom Bar        | Inferred        |

**Label** **Label** - A variably sized amount of static text.

**Button** **Button** - Intercepts touch events and sends an action message to a target object when it's tapped.

**1 2** **Segmented Control** - Displays multiple segments, each of which functions as a discrete button.

### Flappy Swift - Game Center

#### Enable Game Center

To add Game Center to your app binary, you must include the feature in the Game Kit framework. You can start by enabling Game Center for a single game or a group of games. Both options enable multiplayer features including compatibility across multiple apps.

#### Single Game

Select this option if your app has its own set of leaderboards and achievements.

Enable for Single Game

#### Group of Games

Select this option if this app shares leaderboards and achievements with other apps you have provided.

Enable for Group Games

Cancel

# Flappy Swift

## Game Center

Game Center has been enabled for your app. Click below if you want to disable it.

Enabled

To share leaderboards and achievements of this app with other apps you have provided, move this app to a Game Center group.

Move to Group

## Leaderboards

Leaderboards allow users to view the top scores of all Game Center players of your app. Leaderboards that are live for any app version cannot be removed.

Add Leaderboard

Delete Test Data: ?

## Chapter 11: ASAPServer, a Server in Swift

```

→ Swif2ByExample curl http://localhost:8888/hello/james/bond
Hello Optional("james") Optional("bond")%
→ Swif2ByExample
→ Swif2ByExample
→ Swif2ByExample
→ Swif2ByExample curl -X POST http://localhost:8888/hello/james/bond
{"greeting":"Hello","surname":"bond","name":"james"}%
→ Swif2ByExample
→ Swif2ByExample

```

```

Linking Executable: .build/debug/ASAP
.build/debug/ASAP
Starting...
Hello Optional("james") Optional("bond")

```

```

Created object: {
  "greeting": "Hello",
  "name": "james",
  "surname": "bond"
}

```

→ **ASAPServer** git:(7\_ASAP\_9\_ASAPWithServer) x make run

```

swift build
