

Chapter 1, A Tour of Interactive Computing with IPython

New paragraph

This is *rich* text with [links](#), equations:

$$\hat{f}(\xi) = \int_{-\infty}^{+\infty} f(x) e^{-i\xi x}$$

code with syntax highlighting:

```
print("Hello world!")
```

and images:

Chapter 2, Mastering the Notebook

```
In [9]: rows, cols = imdata.size
        grid = BlockGrid(width=rows, height=cols,
                          block_size=4, lines_on=False)
        for block, rgb in zip(grid, imdata):
            block.rgb = rgb
        grid.show()
```

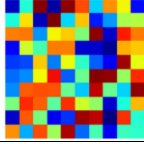

First chapter

Let's write some rich text with [links](#) and lists:

- item1
- item2
 1. subitem
 2. subitem
- item3

```
In [1]: import numpy as np
import matplotlib.pyplot as plt
%matplotlib inline
plt.figure(figsize=(2,2));
plt.imshow(np.random.rand(10,10), interpolation='none');
plt.axis('off');
plt.tight_layout();
```

My document

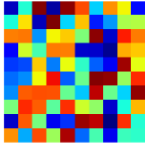

Cyrille Rossant

1 First chapter

Let's write some *rich text* with [links](#) and lists:

- item1
- item2
 1. subitem
 2. subitem
- item3

```
In [1]: import numpy as np
import matplotlib.pyplot as plt
%matplotlib inline
plt.figure(figsize=(2,2));
plt.imshow(np.random.rand(10,10), interpolation='none');
plt.axis('off');
plt.tight_layout();
```

Cell Toolbar:  renumber all code cells

Customize CSS in the notebook

In this recipe, we show how to customize the CSS in the notebook interface and in a exported HTML notebook.

Getting started

You are expected to know a bit of CSS3 for this recipe. You can find many tutorials online (see references at the end of this recipe).

In []: # editing a cell

First chapter

Let's write some *rich text* with [links](#) and lists:

- item1
- item2
 1. subitem
 2. subitem
- item3

```
In [1]: import numpy as np
import matplotlib.pyplot as plt
%matplotlib inline
plt.figure(figsize=(2,2));
plt.imshow(np.random.rand(10,10), interpolation='none');
plt.axis('off');
plt.tight_layout();
```

```
octave_slider = widgets.IntSliderWidget()
octave_slider.max = 1
octave_slider
```

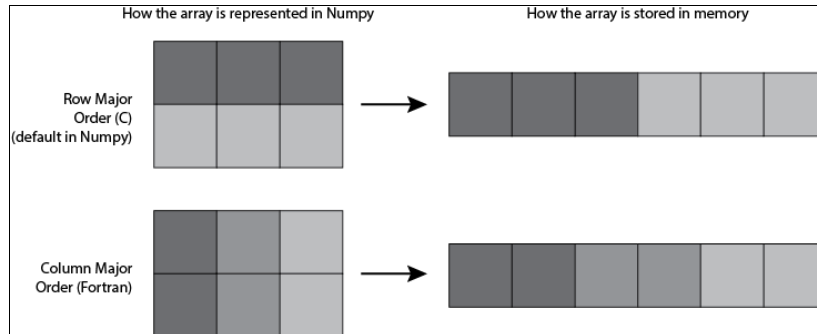

```
In [14]: ht = HandsonDataFrame(df)
ht.show()
```

×	352	201	859	322	352
	326	519	848	1024	42
	171	480	213	619	192

Chapter 4, Profiling and Optimization

Chapter 5, High-performance Computing

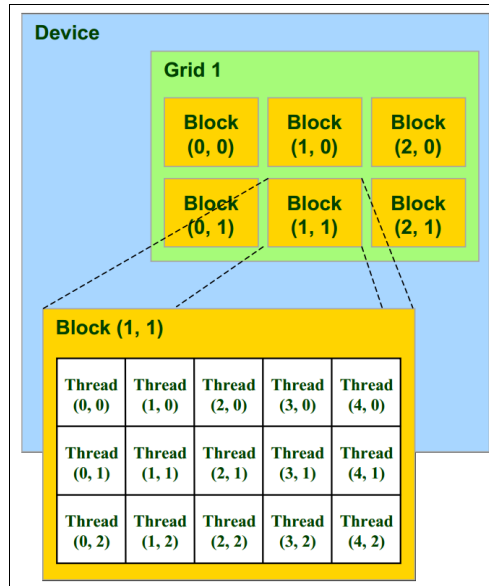

```

1: import numpy as np
2:
3: def mandelbrot_cython(int[:,::1] m,
4:                       int size,
5:                       int iterations):
6:     cdef int i, j, n
7:     cdef complex z, c
8:     for i in range(size):
9:         for j in range(size):
10:            c = -2 + 3./size*j + 1j*(1.5-3./size*i)
11:            z = 0
12:            for n in range(iterations):
13:                if z.real**2 + z.imag**2 <= 100:
14:                    z = z*z + c
15:                    m[i, j] = n
16:                else:
17:                    break

```

```
progress_bar(ar)
```

```
