Transform: Not set -399, -245 None

The screenshot shows the Georeferencer - Scanned1990.tif interface. The main canvas displays the same grayscale aerial photograph of a building with a red dot labeled "GCP # 1" and a yellow arrow. Below the canvas is a table titled "GCP table" with the following data:

on/off	id	srcX	srcY	dstX	dstY	dX[pixels]	dY[pixels]	residual[pixels]
<input checked="" type="checkbox"/>	0	121.32	-244.85	474793.69	4410597.69	0.00	0.00	0.00

Below the table, there is a text box containing the text "GCP # 1 – Source and Destination Coordinates". At the bottom right, there are input fields for "76.2,-194.6" and "None".

Algorithm description

This is a simple model that identifies riparian woodlands. It uses streams and tree data as inputs. The rivers are buffered and the buffer data is used to clip the trees to create the riparian trees data.

Input parameters

Rivers

Perennial streams of Alaska

Buffer distance

Distance in meters to buffer streams

Trees

Polygonal tree data for Alaska

Outputs

Riparian Trees

Trees within 100 meters of perennial streams
