

Chapter 1: Taking Your First Steps with React

Chapter 2: Clean Up Your Code

The screenshot shows the React documentation page for "A Simple Component". The page header includes the React logo, navigation links for Docs, Tutorial, Community, and Blog, a search bar, and version information (v16.6.3) and a GitHub link. The main content area is divided into two columns. The left column contains the text: "React components implement a `render()` method that takes input data and returns what to display. This example uses an XML-like syntax called JSX. Input data that is passed into the component can be accessed by `render()` via `this.props`." Below this is a section titled "JSX is optional and not required to use React." with the text: "Try the Babel REPL to see the raw JavaScript code produced by the JSX compilation step." The right column is a "LIVE JSX EDITOR" with a "JSX?" toggle. It shows a code editor with the following code:

```
class HelloMessage extends React.Component {
  render() {
    return (
      <div>
        Hello {this.props.name}
      </div>
    );
  }
}

ReactDOM.render(
  <HelloMessage name="Taylor" />,
  mountNode
);
```

 To the right of the code editor is a "RESULT" box displaying "Hello Taylor".

Chapter 3: Creating Truly Reusable Components

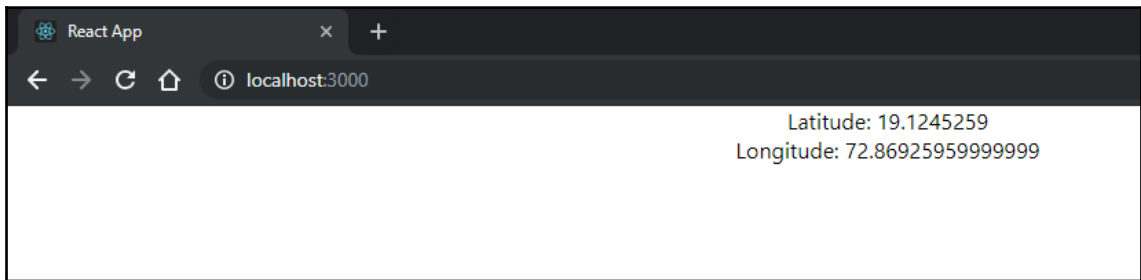

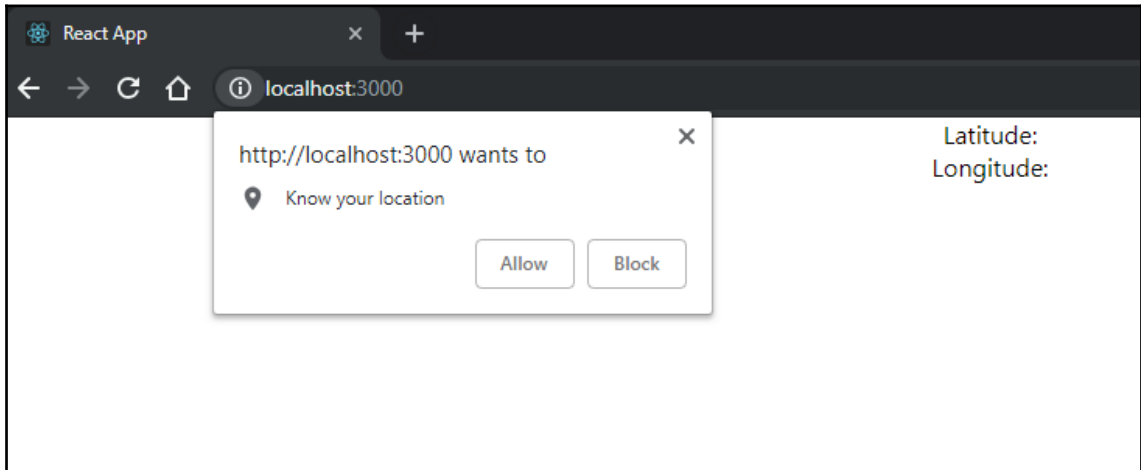

Edit `src/App.js` and save to reload.

3 Project Goals

Welcome, Carlos Santana!

To begin, let's create a new project. Projects help you organize your resources by environment, workload, client - however you or your team like to work.

Note: You can change the name, redefine the purpose, and move resources between projects as your needs change.

Create your first project

Enter project name
Dev

What is your project for?

DROPLETS (1)

dev-education	159.65.102.222		
---------------	----------------	--	--

Your new Droplet is all set to go! You can access it using the following credentials:

Droplet Name: dev-education
IP Address: 159.65.102.222
Username: root
Password: fa56d554709792b7a84cc1a4a4

For security reasons, you will be required to change this Droplet's root password when you login. You should choose a strong password that will be easy for you to remember, but hard for a computer to guess. You might try creating an alpha-numerical phrase from a memorable sentence (e.g. "I won my first spelling bee at age 7," might become "Iwm#1sbaa7"). Random strings of common words, such as "Mousetrap Sandwich Hospital Anecdote," tend to work well, too.

As an added security measure, we also strongly recommend adding an SSH key to your account. You can do that here: <https://cloud.digitalocean.com/settings/security?i=deb226>

Once added, you can select your SSH key and use it when creating future Droplets. This eliminates the need for root passwords altogether, and makes your Droplets much less vulnerable to attack.

Happy Coding,
Team DigitalOcean

Turn off Droplet

This shutdown process takes a few minutes to complete because it makes two attempts.

First, we try to shut down your Droplet gracefully. If this fails because your Droplet is unresponsive, we power the Droplet off.

A hard shutdown can cause data corruption, so we recommend turning off your Droplet from the command line when possible.

You will still be billed for Droplets that are turned off because your disk space, CPU, RAM, and IP address will still be reserved.

Don't show me this message again.
