## The Issue Tracker is the place to add things that need to be improved or solved in a project

Issues can be bugs, tasks or ideas to be discussed. Also, issues are searchable and filterable.

I'll work on this one, I think @nwalling and @shmouflon are both on vacay.
It should be pretty easy, just need to run `composer init` from the directory and make sure I have [Composer](https://getcomposer.org/) installed.

Specific Runners
Setup a specific Runner automatically
You can easily install a Runner on a Kubernetes cluster.
Learn more about Kubernetes
1. Click the button below to begin the install process by navigating to the Kubernetes page
2. Select an existing Kubernetes cluster or create a new one
3. From the Kubernetes cluster details view, install Runner from the applications list
Install Runner on Kubernetes
Setup a specific Runner manually
1. Install a Runner compatible with GitLab CI (checkout the GitLab Runner section for information on how to install it).
2. Specify the following URL during the Runner setup: http://gitlab.judges119.me/
3. Use the following registration token during setup: Krr66ucS7zLtiDKz_uAz
4. Start the Runner!

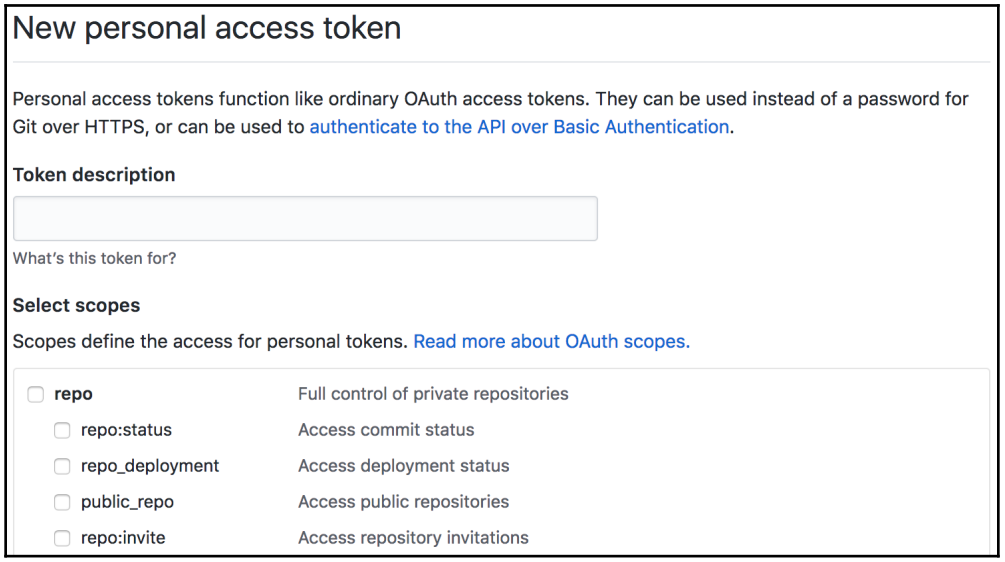
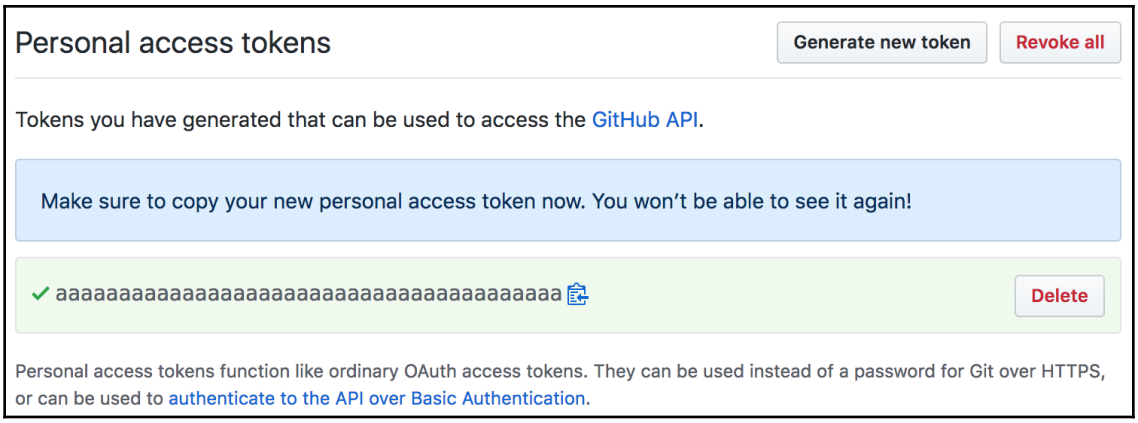
Projects › GitHub import
Import repositories from GitHub
To import GitHub repositories, you first need to authorize GitLab to access the list of your GitHub repositories:
List your GitHub repositories
Alternatively, you can use a Personal Access Token. When you create your Personal Access Token, you will need to select the repo scope, so we can display a list of your public and private repositories which are available to import.
Personal Access Token
List your GitHub repositories



New personal access token
Personal access tokens function like ordinary OAuth access tokens. They can be used instead of a password for Git over HTTPS, or can be used to authenticate to the API over Basic Authentication.
Token description
What's this token for?
Select scopes
Scopes define the access for personal tokens. Read more about OAuth scopes.
repo
Full control of private repositories
repo:status
Access commit status
repo_deployment
Access deployment status
public_repo
Access public repositories
repo:invite
Access repository invitations



Personal access tokens
Generate new token
Revoke all
Tokens you have generated that can be used to access the GitHub API.
Make sure to copy your new personal access token now. You won't be able to see it again!
aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa
Delete
Personal access tokens function like ordinary OAuth access tokens. They can be used instead of a password for Git over HTTPS, or can be used to authenticate to the API over Basic Authentication.

Confirm access to your account
GitLab is requesting access to the following:
Read your account information
Read your repositories' issues
Read your team's project settings and read repositories contained within your team's projects
Read your repositories and their pull requests
Read and modify your repositories' wikis
This 3rd party vendor has not provided a privacy policy or terms of use. Atlassian's Privacy Policy is not applicable to the use of this App.

snowyfacts
Import
judges119/hybridgames
Incompatible project
One or more of your Bitbucket projects cannot be imported into GitLab directly because they use Subversion or Mercurial for version control, rather than Git. Please convert them to Git, and go through the import flow again.

**Git repository URL**

https://username:password@gitlab.company.com/group/project.git

- The repository must be accessible over `http://`, `https://` or `git://`.
- If your HTTP repository is not publicly accessible, add authentication information to the URL: `https://username:password@gitlab.company.com/group/project.git`.
- The import will time out after 180 minutes 0 seconds. For repositories that take longer, use a clone/push combination.
- To import an SVN repository, check out this document.
- Once imported, repositories can be mirrored over SSH. Read more here

**Project path**

http://gitlab.judges119.me/ judges119

**Project name**

my-awesome-project

Want to house several dependent projects under the same namespace? Create a group

**Project description (optional)**

Description format

**Visibility Level**

Private
Project access must be granted explicitly to each user.

Internal
The project can be accessed by any logged in user.

Public
The project can be accessed without any authentication.

Transfer project
Select a new namespace
Be careful. Changing the project's namespace can have unintended side effects.
You can only transfer the project to namespaces you manage.
You will need to update your local repositories to point to the new location.
Project visibility level will be changed to match namespace rules when transferring to a group.
Transfer project

World Domination
While the title may seem underwhelming, our real goal is multiverse domination but for worlds that haven't experienced interdimensional or even intergalactic travel, it's better to use a term that seems realistic and all encompassing to them.
