Chapter 5: 5.UI Development with Xamarin

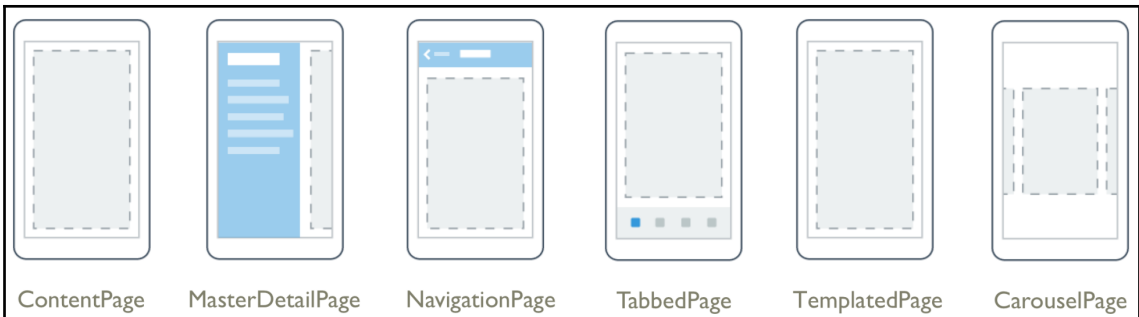

The image displays two screenshots related to system settings. The left screenshot shows a settings menu with two rows of toggle switches. The first row is labeled 'On' and the second 'Off'. Each row has two columns: 'enabled' and 'disabled'. In the 'On' row, the 'enabled' toggle is turned on (green), while the 'disabled' toggle is off (grey). In the 'Off' row, both the 'enabled' and 'disabled' toggles are off (grey).

The right screenshot shows an iPhone 'Settings' page for 'Sounds & Haptics'. At the top, the time is 9:41. Below the title, there are two sections: 'VIBRATE' and 'RINGER AND ALERTS'. Under 'VIBRATE', 'Vibrate on Ring' has a white toggle switch, and 'Vibrate on Silent' has a green toggle switch. Under 'RINGER AND ALERTS', there is a volume slider and a speaker icon. At the bottom, 'Change with Buttons' has a grey toggle switch. A note at the very bottom states: 'The volume of the ringer and alerts will not be affected by the volume buttons.'

Infrastructure Services				
Compute Virtual Machines Containers	Storage BLOB Storage Azure Files Premium Storage	Networking Virtual Network Load Balancer DNS Express Route Traffic Manager VPN Gateway Application Gateway		

To see all resource providers in Azure, and the registration status for your subscription, use:

Azure PowerShell Copy Try It

`Get-AzResourceProvider -ListAvailable | Select-Object ProviderNamespace, RegistrationState`

Which returns results similar to:

ProviderNamespace	RegistrationState
Microsoft.ClassicCompute	Registered
Microsoft.ClassicNetwork	Registered
Microsoft.ClassicStorage	Registered
Microsoft.CognitiveServices	Registered
...	

Registering a resource provider configures your subscription to work with the resource provider. The scope for registration is always the subscription. By default, many resource providers are automatically registered. However, you may need to manually register some resource providers. To register a resource provider, you must have permission to perform the `/register/action` operation for the resource provider. This operation is included in the Contributor and Owner roles.

Azure PowerShell Copy Try It

`Register-AzResourceProvider -ProviderNamespace Microsoft.Batch`

Which returns results similar to:

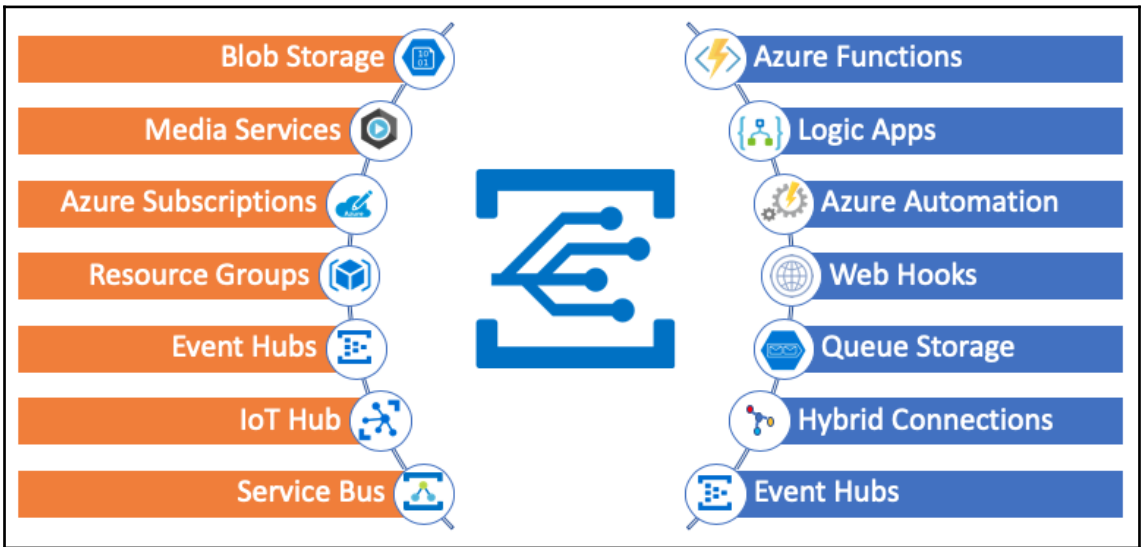

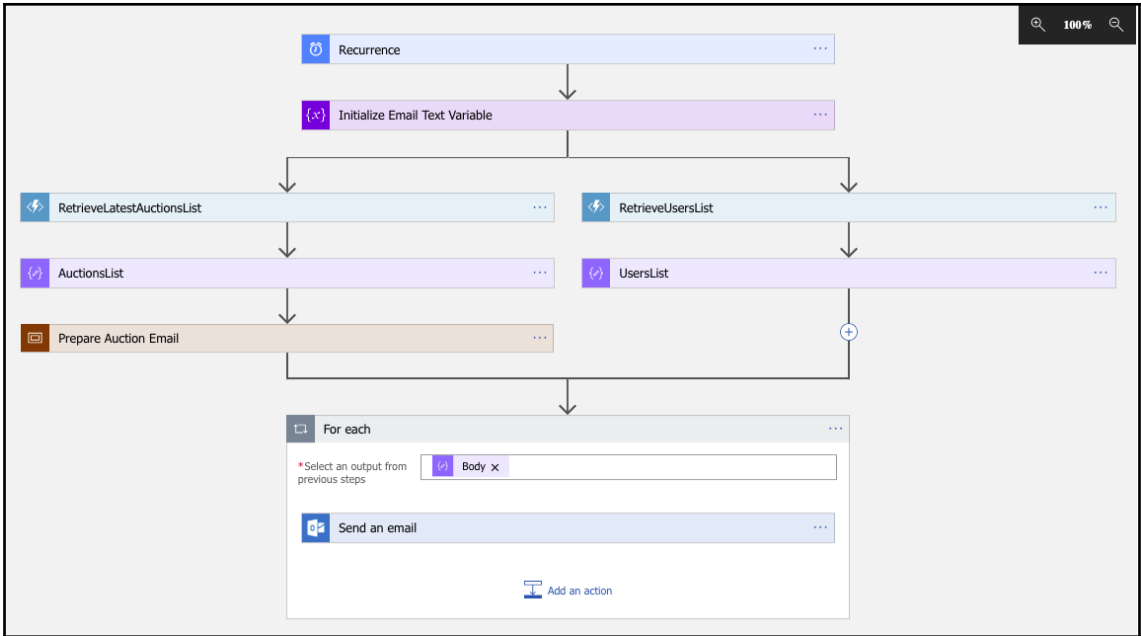

ProviderNamespace	RegistrationState
Microsoft.Advisor	Registered
Microsoft.Batch	Unregistered
Microsoft.Cache	Registered
Microsoft.ClassicStorage	Registered
Microsoft.Compute	Registered
Microsoft.ContainerRegistry	Registered
Microsoft.DevTestLab	Registered

Chapter 8: 8.Creating a Datastore with Cosmos DB

Create Azure Cosmos DB Account

[Basics](#) [Network](#) [Tags](#) [Review + create](#)

Azure Cosmos DB is a fully managed globally distributed, multi-model database service, transparently replicating your data across any number of Azure regions. You can elastically scale throughput and storage, and take advantage of fast, single-digit-millisecond data access using the API of your choice backed by 99.999 SLA. [learn more](#)

PROJECT DETAILS

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Redis Cache - Microsoft

Not secure https://portal.azure.com/#blade/Microsoft_Azure_Market

Microsoft Azure

Home > Resource groups > HandsOnCrossPlatform > Everything > Redis Cache

Redis Cache

Microsoft

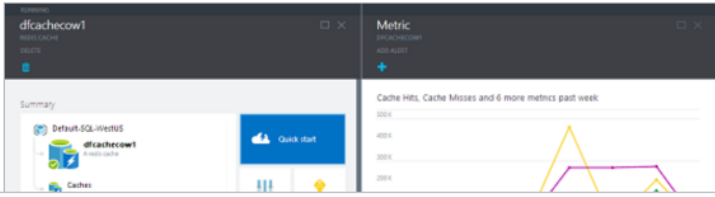

Microsoft Azure Redis Cache is based on the popular [open source Redis Cache](#). It gives users access to a secure, dedicated Redis Cache, managed by Microsoft. Users get the best of both worlds, the rich Redis feature set and ecosystem, and reliable hosting and monitoring from Microsoft.

Microsoft Azure Redis Cache is available in the following tiers:

- Basic – Single node, multiple sizes, ideal for development/test and non-critical workloads. The basic tier has no SLA.
- Standard – A replicated cache in a two node Primary/Secondary configuration managed by Microsoft, with a high availability SLA.
- Premium - The new Premium tier includes all the Standard-tier features and more, such as better performance compared to Basic or Standard-tier Caches, bigger workloads, data persistence, and enhanced network security.

Microsoft Azure Redis Cache helps your application stay responsive even as user load increases. It does so by leveraging the low latency, high-throughput capabilities of the Redis engine. This separate distributed cache layer allows your data tier to scale independently for more efficient use of compute resources in your application layer.

[Save for later](#)

The screenshot shows a summary and metrics view for a Redis Cache resource named 'd1cachecow1'. The summary section includes a 'Default-SQL-Instance' and a 'Caches' section. The metrics section displays a line graph for 'Cache Hits, Cache Misses and 6 more metrics past week'.

Example schema — Determine your bot's capabilities; create corresponding intents; add example utterances, and create entities to collect data. Create additional entities for each type of information collected.

Bot action: Purchase airline tickets

Reserve rental cars

Make hotel reservations

Intent: **bookFlight**

rentCar

reserveHotel

Example utterances: "Book a flight to **Seattle**"
"Buy 3 tickets to **New York**"
"book a flight to **Rio** on **Contoso Air**"
"get me a flight to **Rio** next week"

"Book a car on July 1 from **Seattle**"
"reserve a car in **New York**"

"find hotels in **Seattle** from May 1-5"
"reserve a hotel room in **New York**"

Entities: city, **airline**

city

city

What type of certificate do you need?

Development

- iOS App Development**
Sign development versions of your iOS app.
- Apple Push Notification service SSL (Sandbox)**
Establish connectivity between your notification server and the Apple Push Notification service sandbox environment to deliver remote notifications to your app. A separate certificate is required for each app you develop.

Production

- App Store and Ad Hoc**
Sign your iOS app for submission to the App Store or for Ad Hoc distribution.

Edit Parameters

The following parameter values will be used for this deployment:

Parameter Name	Value
resourceNameCache	 handsoncoreTest1234

Used as the resource name for Redis cache resource
This value is not one of the allowed values for parameter 'resourceNameCache'.

Save Cancel

Connection strings

+ New connection string  Show Values

Name	Value	Type
AzureRedisCache	Hidden value. Click show values button above	Custom

Add an Azure Resource Manager service connection ✕

Service Principal Authentication Managed Identity Authentication

Connection name

Scope level

Subscription

Resource Group

Subscriptions listed are from Azure Cloud

A new Azure service principal will be created and assigned with "Contributor" role, having access to all resources within the subscription. Optionally, you can select the Resource Group to which you want to limit access.

If your subscription is not listed above, or your organization is not backed by Azure Active Directory, or to specify an existing service principal, [use the full version of the service connection dialog](#).

Allow all pipelines to use this connection.

Chapter 19: 19.CI/CD with Azure DevOps

Require a minimum number of reviewers

Require approval from a specified number of reviewers on pull requests.

Minimum number of reviewers

- Allow users to approve their own changes.
- Allow completion even if some reviewers vote "Waiting" or "Reject".
- Reset code reviewer votes when there are new changes.

Check for linked work items

Encourage traceability by checking for linked work items on pull requests.

Policy requirement

- Required**
Block pull requests from being completed unless they have at least one linked work item.
- Optional**
Warn if there are no linked work items, but allow pull requests to be completed.

Check for comment resolution

Check to see that all comments have been resolved on pull requests.

Limit merge types

Control branch history by limiting the available types of merge when pull requests are completed.

Build validation

Validate code by pre-merging and building pull request changes

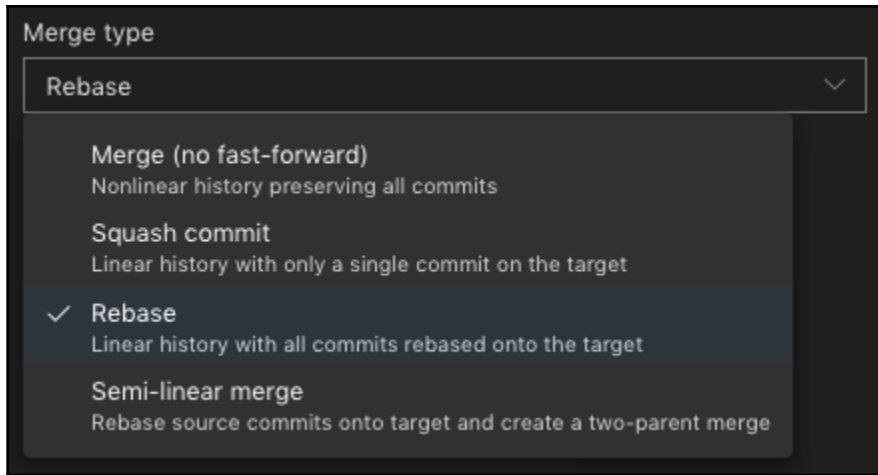

+ Add build policy

Build pipeline	Requirement	Path filter	Expiration	Trigger
 Validation Tests	Required	No filter	Strict expiration	Automatic <input checked="" type="checkbox"/> Enabled

Require approval from additional services

Require other services to post successful status to complete pull requests. [Learn more](#)

+ Add status policy
