Use developer features

These settings are intended for development use only.

[Learn more](#)

Windows Store apps

Only install apps from the Windows Store.

Sideload apps

Install apps from other sources that you trust, like your workplace.

Developer mode

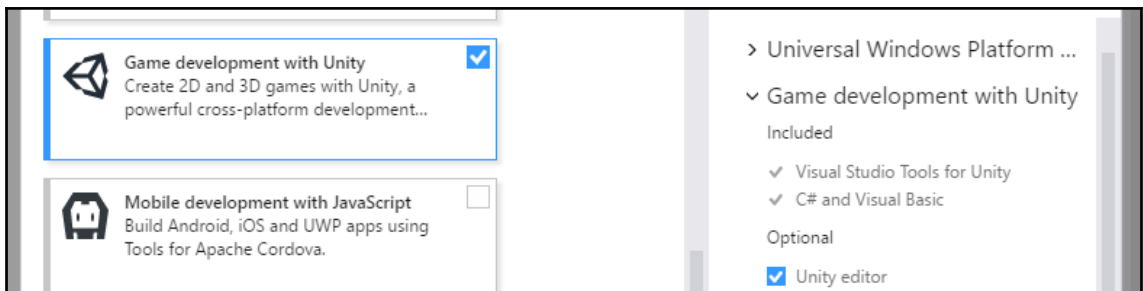

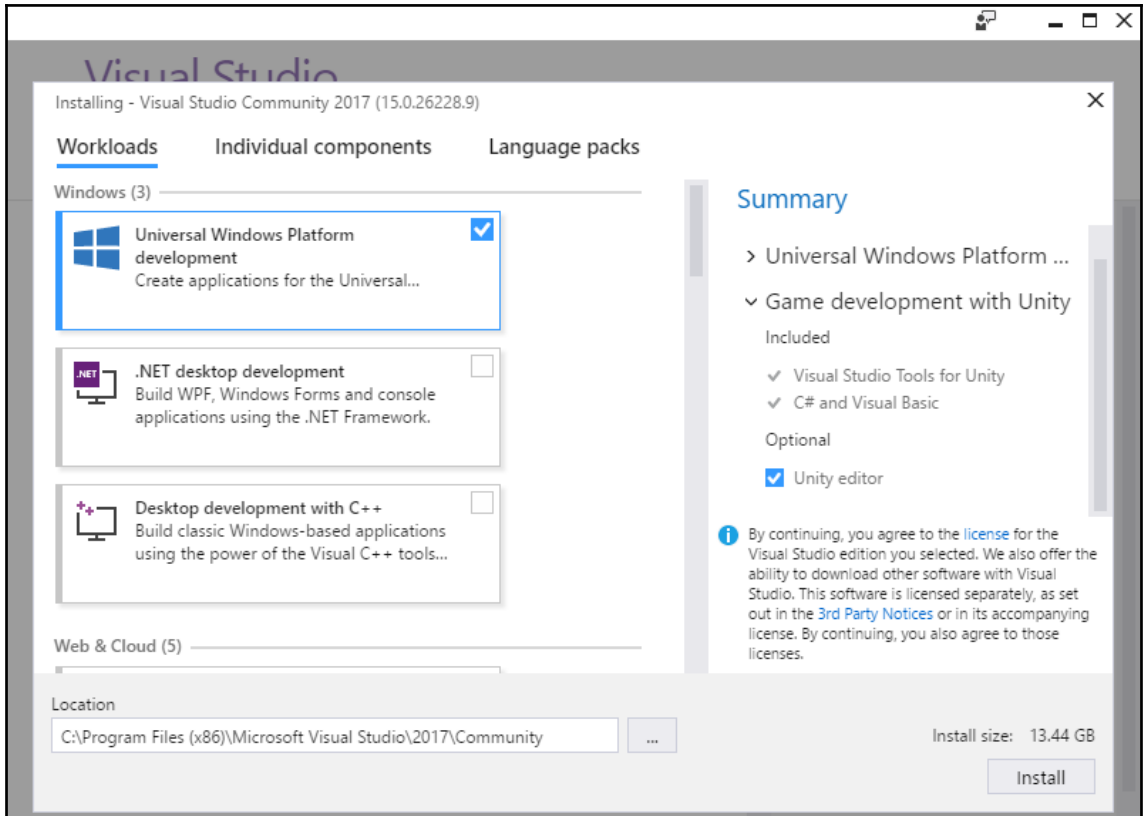

Install any signed and trusted app and use advanced development features.

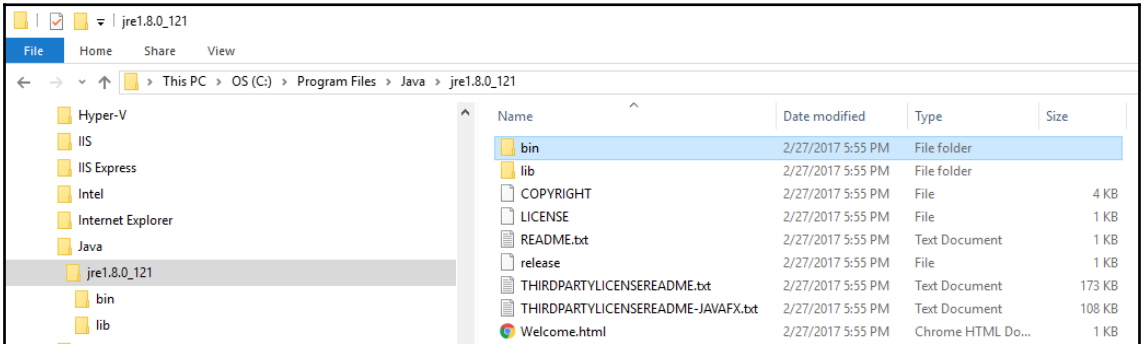

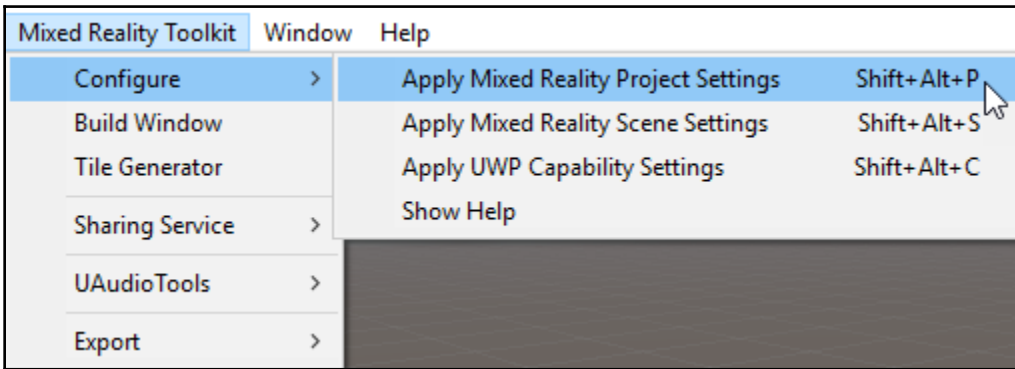

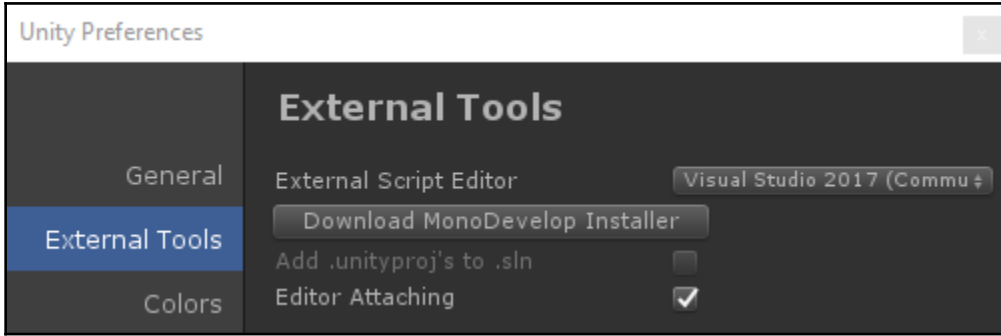

Developer Mode package installed. Remote tooling for desktop is now enabled.

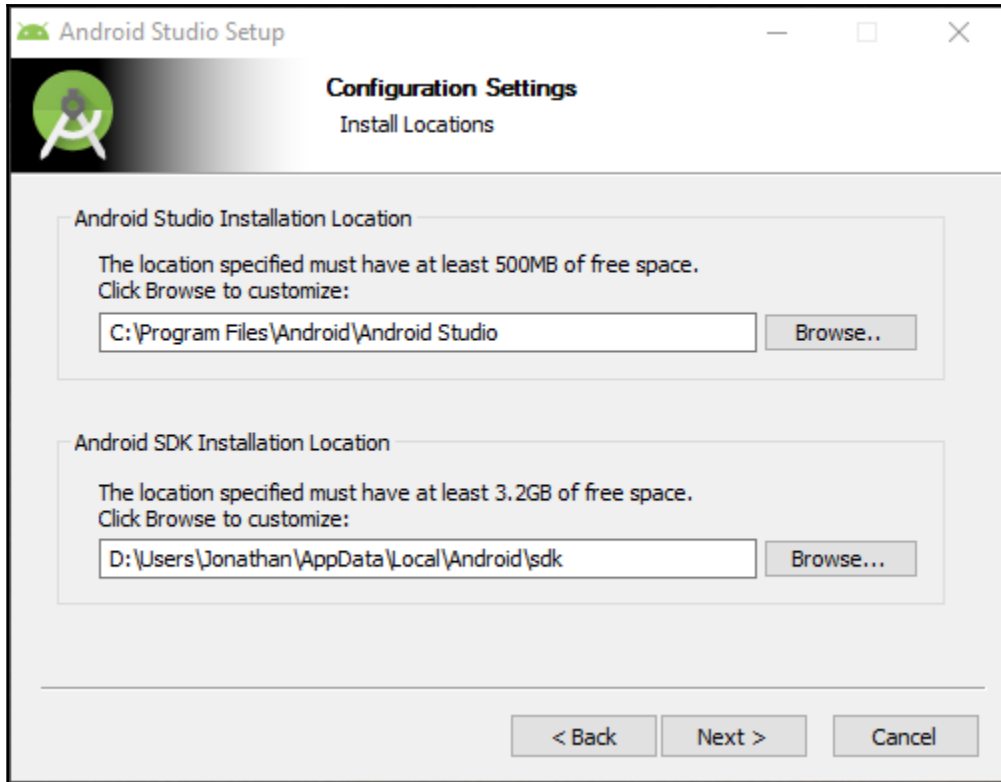

Enable Device Portal

Turn on remote diagnostics over local area network connections.

Off

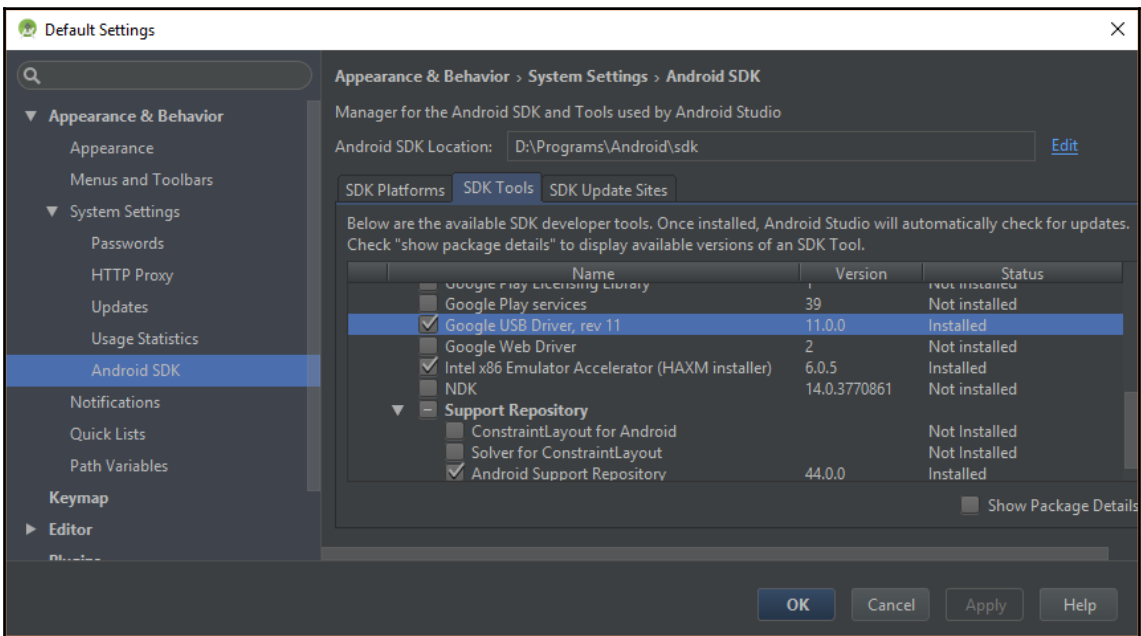

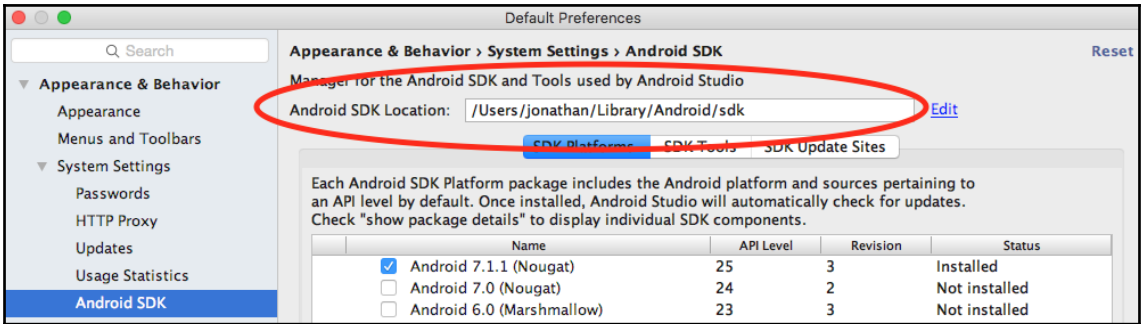

Get just the command line tools

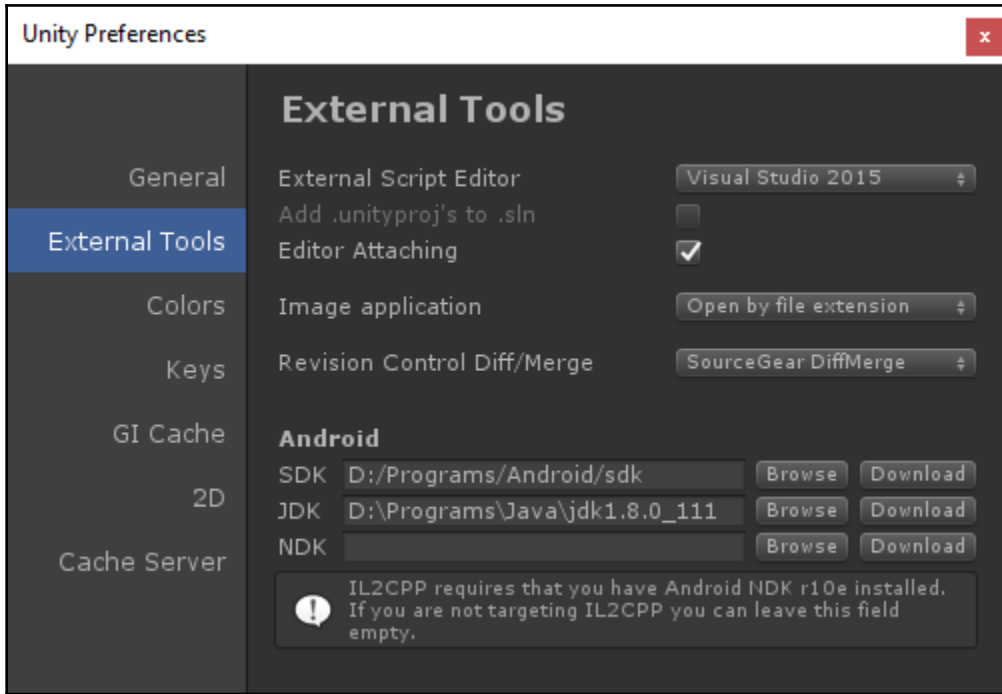

If you do not need Android Studio, you can download the basic Android command line tools below. You can use the included [sdkmanager](#) to download other SDK packages.

These tools are included in Android Studio.

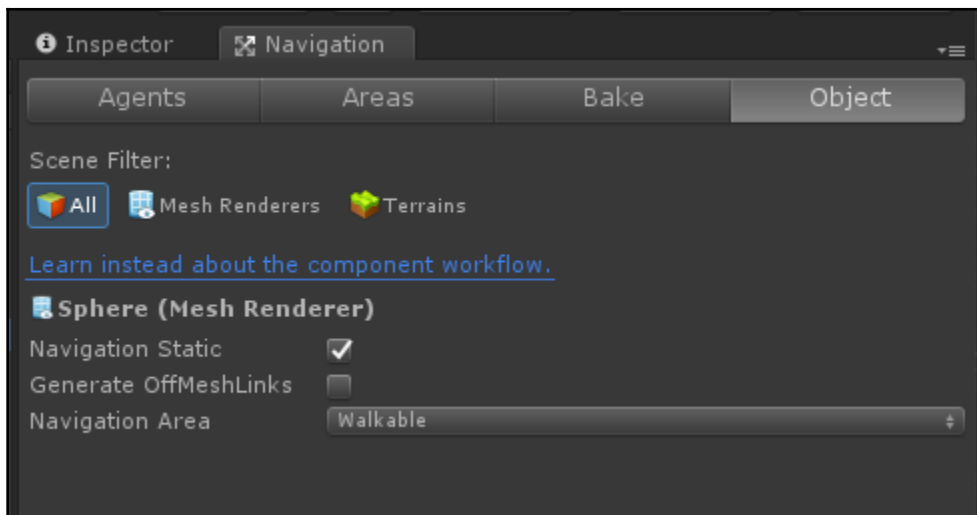

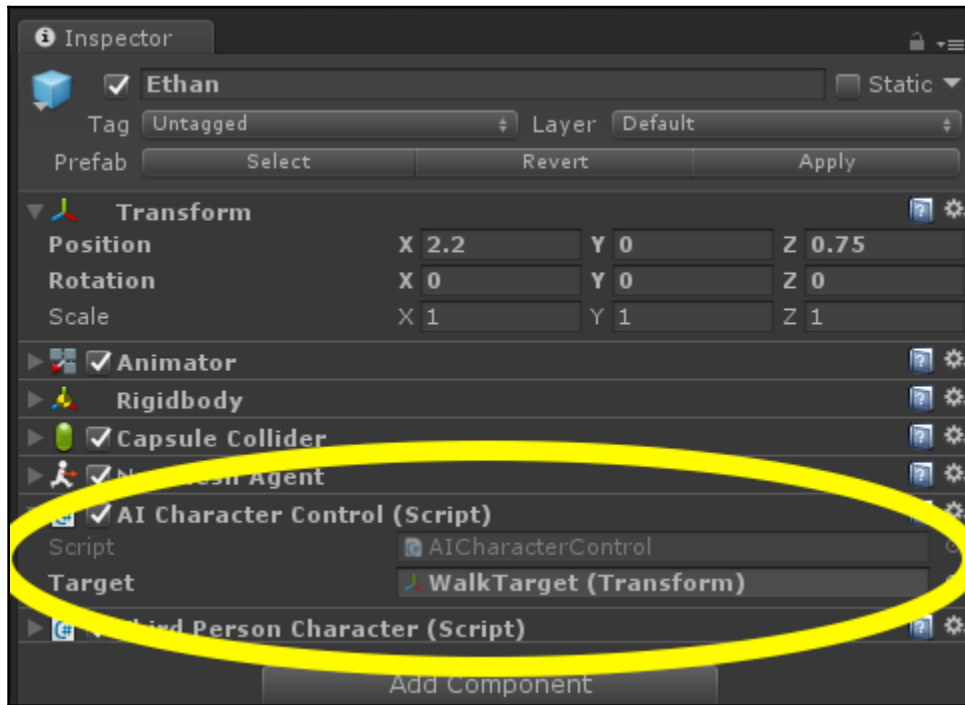

Platform	SDK tools package	Size	SHA-1 checksum
Windows	tools_r25.2.3-windows.zip	292 MB (306,745,639 bytes)	b965dec234ed793eb9574bad8791c50ca574173
Mac	tools_r25.2.3-macosx.zip	191 MB (200,496,727 bytes)	0e88c0bdb8f8ee85cce248580173e033a1bbc9cb
Linux	tools_r25.2.3-linux.zip	264 MB (277,861,433 bytes)	aafe7f28ac51549784efc2f3bdfc620be8a08213

See the [SDK tools release notes](#).

! Input: Fire1 down
UnityEngine.Debug:Log(Object)
! Input: Fire1 up
UnityEngine.Debug:Log(Object)
```

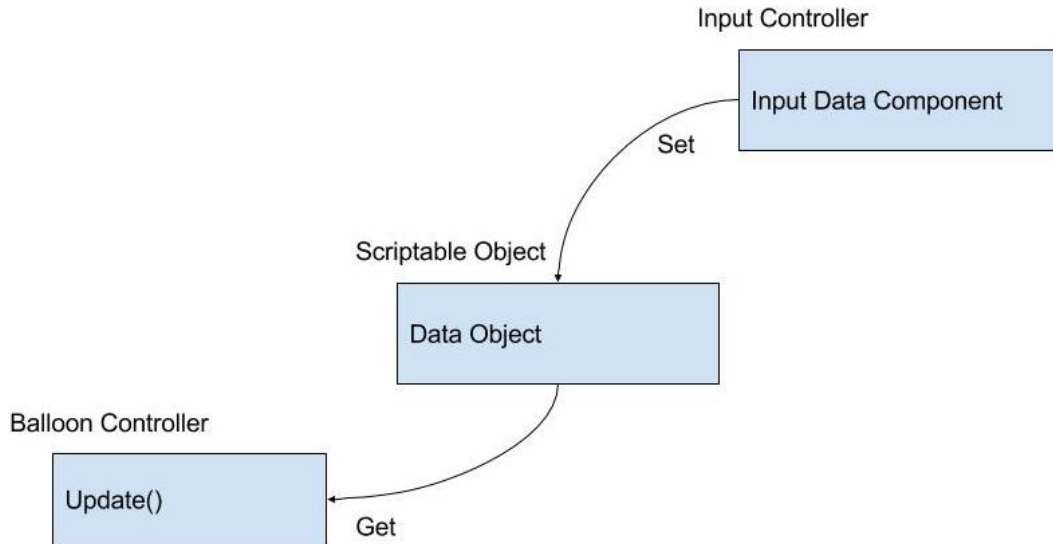

Input Polling

With input polling, your function gets the current input data values (e.g. `ButtonDown()`)

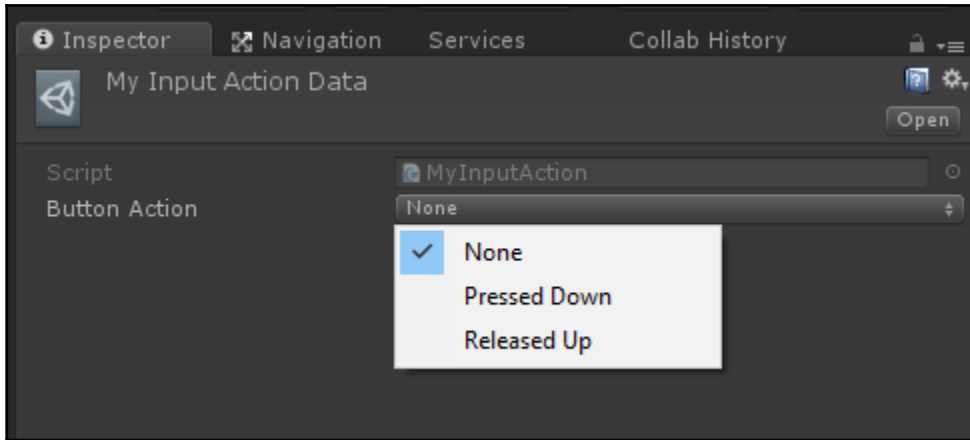

Input Object

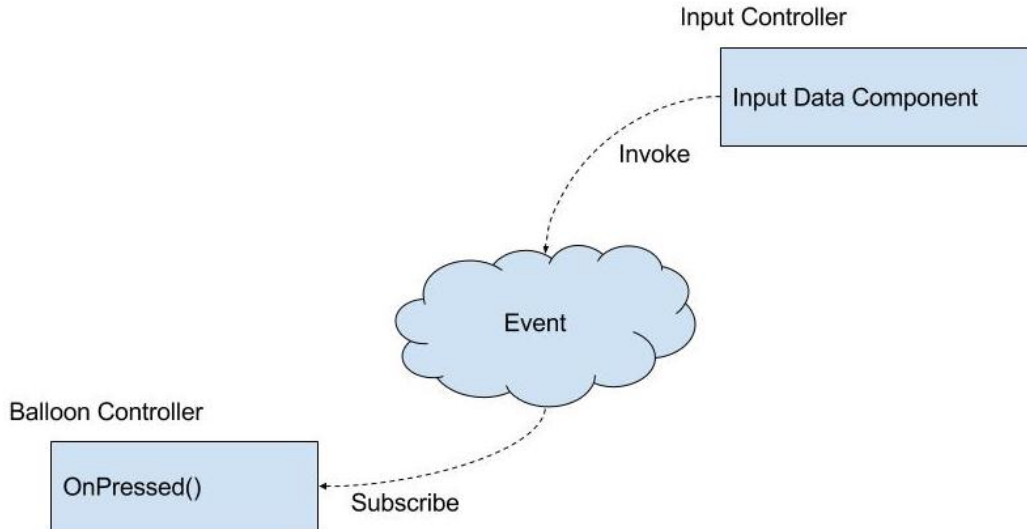

With a scriptable object, the Balloon Controller gets the current input data from a separate data object, which the input component has set.

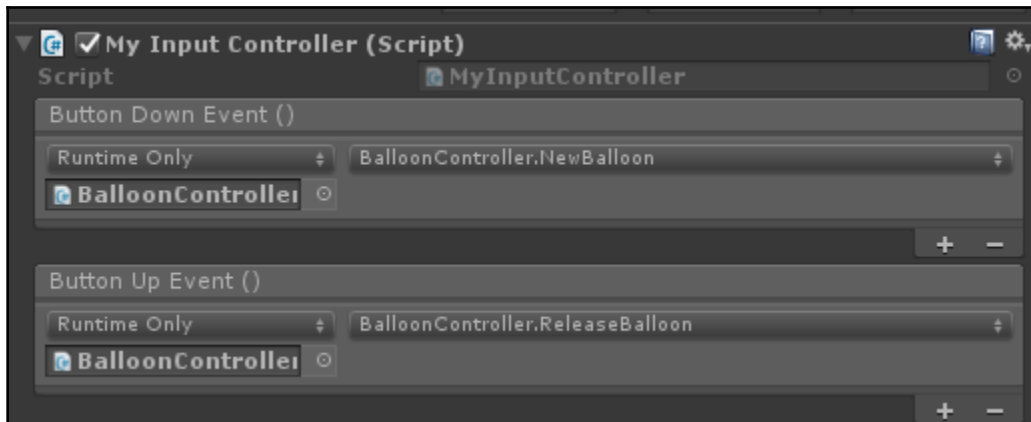

Input Events

With Unity events, the input component invokes an event when input data has changed, and you subscribe listener functions that are called when such events occur.
