## Cacti Installation Wizard

### License Agreement

Thanks for taking the time to download and install Cacti, the complete graphing solution for your network. Before you can start making cool graphs, there are a few pieces of data that Cacti needs to know.

Make sure you have read and followed the required steps needed to install Cacti before continuing. Install information can be found for [Unix](#) and [Win32](#)-based operating systems.

Also, if this is an upgrade, be sure to reading the [Upgrade](#) information file.

Cacti is licensed under the GNU General Public License, you must agree to its provisions before continuing:

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

Accept GPL License Agreement

## Cacti Installation Wizard

### Pre-installation Checks

#### MySQL TimeZone Support

Your Cacti database account has access to the MySQL TimeZone database and that database is populated with global TimeZone information.

#### Required PHP Module Support

Cacti requires several PHP Modules to be installed to work properly. If any of these are not installed, you will be unable to continue the installation until corrected. In addition, for optimal system performance Cacti should be run with certain MySQL system variables set. Please follow the MySQL recommendations at your discretion. Always seek the MySQL documentation if you have any questions.

The following PHP extensions are mandatory, and MUST be installed before continuing your Cacti install.

#### Required PHP Modules

Name	Required	Installiert
PHP version	5.2.0+	5.4.16
posix	Ja	Ja
session	Ja	Ja
sockets	Ja	Ja
PDO	Ja	Ja
pdo_mysql	Ja	Ja
xml	Ja	Ja
ldap	Ja	Ja
mbstring	Ja	Ja
pcre	Ja	Ja
json	Ja	Ja
openssl	Ja	Ja
gd	Ja	Ja
zlib	Ja	Ja

#### Optional PHP Module Support

The following PHP extensions are recommended, and should be installed before continuing your Cacti install.

#### Optional Modules

Name	Optional	Installiert
snmp	Ja	Ja
gmp	Ja	Ja

These MySQL performance tuning settings will help your Cacti system perform better without issues for a longer time.

#### Recommended MySQL System Variable Settings

MariaDB Tuning (/etc/my.cnf) - [ Documentation ] Note: Many changes below require a database restart

Variable	Current Value	Recommended Value	Comments
version	10.1.21-MariaDB	>= 5.6	MySQL 5.6+ and MariaDB 10.0+ are great releases, and are very good versions to choose. Make sure you run the very latest release though which fixes a long standing low level networking issue that was causing spine m... issues with
innodb_write_io_threads	16	>= 16	With modern SSD type storage, having multiple write io threads is advantageous for applications with high io characteristics.

## Cacti Installation Wizard

### Installation Type

Please select the type of installation

Note that when upgrading, you only will receive the Upgrade selection.

You have three Cacti installation options to choose from:

- **New Primary Server** - Choose this for the Primary Cacti Web Site.
- **New Remote Poller** - Remote Pollers are used to access networks that are not readily accessible to the Primary Cacti Web Site.
- **Upgrade Previous Cacti** - Use this option to upgrade a previous release of Cacti

New Primary Server ▾

The following information has been determined from Cacti's configuration file. If it is not correct, please edit "include/config.php" before continuing.

#### Local Cacti database connection information

Database: %s

Database User: **cactiuser**

Database Hostname: **localhost**

Port: **3306**

Server Operating System Type: **unix**

## Cacti Installation Wizard

### Critical Binary Locations and Versions

Make sure all of these values are correct before continuing.

**RRDtool Binary Path:** The path to the rrdtool binary.

**PHP Binary Path:** The path to your PHP binary file (may require a php recompile to get this file).

**snmpwalk Binary Path:** The path to your snmpwalk binary.

**snmpget Binary Path:** The path to your snmpget binary.

**snmpbulkwalk Binary Path:** The path to your snmpbulkwalk binary.

**snmpgetnext Binary Path:** The path to your snmpgetnext binary.

**snmptrap Binary Path:** The path to your snmptrap binary.

**Spine Binary File Location:** The path to Spine binary.

**Cacti Log Path:** The path to your Cacti log file.

**Theme:** Please select one of the available Themes to skin your Cacti with.

**RRDtool Version:** The version of RRDtool that you have installed.

### Directory Permission Checks

Please ensure the directory permissions below are correct before proceeding. During the install, these directories need to be owned by the Web Server user. These permission changes are required to allow the Installer to install Device Template packages which include XML and script files that will be placed in these directories. If you choose not to install the packages, there is an 'install\_package.php' cli script that can be used from the command line after the install is complete.

After the install is complete, you can make some of these directories read only to increase security.

#### Required Writable at Install Time Only

/var/www/html/cacti-1.0.2/resource/snmp\_queries is Writable

/var/www/html/cacti-1.0.2/resource/script\_server is Writable

/var/www/html/cacti-1.0.2/resource/script\_queries is Writable

/var/www/html/cacti-1.0.2/scripts is Writable

#### Required Writable after Install Complete

/var/www/html/cacti-1.0.2/log is Writable

/var/www/html/cacti-1.0.2/cache/boost is Writable

/var/www/html/cacti-1.0.2/cache/mibcache is Writable

/var/www/html/cacti-1.0.2/cache/realtime is Writable

/var/www/html/cacti-1.0.2/cache/spikekill is Writable

All folders are writable

**NOTE:** If you are installing packages, once the packages are installed, you should change the scripts directory back to read only as this presents some exposure to the web site.

## Cacti Installation Wizard

### Template Setup

Please select the Device Templates that you wish to use after the Install. If your Operating System is Windows, you need to ensure that you select the 'Windows Device' Template. If your Operating System is Linux/UNIX, make sure you select the 'Local Linux Machine' Device Template.

Device Templates allow you to monitor and graph a vast assortment of data within Cacti. After you select the desired Device Templates, press 'Finish' and the installation will complete. Please be patient on this step, as the importation of the Device Templates can take a few minutes.

#### Templates

Name	Description	Author	Homepage	<input checked="" type="checkbox"/>
Cisco Router	The Cisco Device Template	The Cacti Group	<a href="http://www.cacti.net">http://www.cacti.net</a>	<input checked="" type="checkbox"/>
Generic SNMP Device	The Generic SNMP Device Template	The Cacti Group	<a href="http://www.cacti.net">http://www.cacti.net</a>	<input checked="" type="checkbox"/>
Local Linux Machine	The Local Linux Device Template	The Cacti Group	<a href="http://www.cacti.net">http://www.cacti.net</a>	<input checked="" type="checkbox"/>

### Site [new]

**Site Information**

**Name**  
The primary name for the Site.

**Address1**  
The primary address for the Site.

**Address2**  
Additional address information for the Site.

**City**  
The city or locality for the Site.

**State**  
The state for the Site.

**Postal/Zip Code**  
The postal or zip code for the Site.

**Country**  
The country for the Site.

**TimeZone**  
The TimeZone for the Site.

**Latitude**  
The Latitude for this Site.

**Longitude**  
The Longitude for this Site.

**Site Notes**  
Additional area use for random notes related to this Site.

**Alternate Name**  
Used for cases where a Site has an alternate named used to describe it.

**Availability/Reachability Options**

**Downed Device Detection**  
 The method Cacti will use to determine if a host is available for polling.  
*NOTE: It is recommended that, at a minimum, SNMP always be selected.*

**Ping Method**  
 The type of ping packet to sent.  
*NOTE: ICMP on Linux/UNIX requires root privileges.*

**Ping Timeout Value**  
 The timeout value to use for host ICMP and UDP ping. This host SNMP timeout value applies for SNMP pings.

**Ping Retry Count**  
 After an initial failure, the number of ping retries Cacti will attempt before failing.

# Chapter 3: Creating and Using Templates

### Data Templates [new]

**Name**  
The name given to this data template.

---

**Data Source**

**Name**  
Choose a name for this data source. It can include replacement variables such as `|host_description|` or `|query_fieldName|`. For a complete list of supported replacement tags, please see the Cacti documentation.

Use Per-Data Source Value (Ignore this Value)

**Data Input Method**  
The script/source used to gather data for this data source. *This field is always templated.*

**Data Source Profile**  
Select the Data Source Profile. The Data Source Profile controls polling interval, the data aggregation, and retention policy for the resulting Data Sources.

Use Per-Data Source Value (Ignore this Value)

**Data Source Active**  
Whether Cacti should gather data for this data source or not.  Data Source Active

Use Per-Data Source Value (Ignore this Value)

### Data Source Item [runProcesses] New

**Internal Data Source Name**  
Choose unique name to represent this piece of data inside of the RRDfile.

Use Per-Data Source Value (Ignore this Value)

**Minimum Value ("U" for No Minimum)**  
The minimum value of data that is allowed to be collected.

Use Per-Data Source Value (Ignore this Value)

**Maximum Value ("U" for No Maximum)**  
The maximum value of data that is allowed to be collected.

Use Per-Data Source Value (Ignore this Value)

**Data Source Type**  
How data is represented in the RRA.

Use Per-Data Source Value (Ignore this Value)

Graph Template Items [edit: Host - Running Processes]						Add
Graph Item	Data Source	Graph Item Type	CF Type	Alpha %	Item Color	
No Items						
Graph Item Inputs						Add
Name						
No Inputs						
Template [edit: Host - Running Processes]						
Name		Host - Running Processes				
The name given to this graph template.						
Graph Template Options						
Common Options						
<b>Title (--title)</b>						
The name that is printed on the graph. It can include replacement variables such as [host_description] or [query_fieldName]. For a complete list of supported replacement tags, please see the Cacti documentation.						
		[host_description] - Running Processes				
<input type="checkbox"/> Use Per-Graph Value (Ignore this Value)						
<b>Vertical Label (--vertical-label)</b>						
The label vertically printed to the left of the graph.						
		processes				
<input type="checkbox"/> Use Per-Graph Value (Ignore this Value)						
<b>Image Format (--imgformat)</b>						
The type of graph that is generated; PNG, GIF or SVG. The selection of graph image type is very RRDtool dependent.						
		PNG ▾				
<input type="checkbox"/> Use Per-Graph Value (Ignore this Value)						
<input type="checkbox"/> Use Per-Graph Value (Ignore this Value)						
<input type="checkbox"/> Use Per-Graph Value (Ignore this Value)						
<b>Tab Width (--tabwidth &lt;pixels&gt;)</b>						
By default the tab-width is 40 pixels, use this option to change it.						
<input type="checkbox"/> Use Per-Graph Value (Ignore this Value)						
<b>Legend Position (--legend-position=&lt;position&gt;)</b>						
Place the legend at the given side of the graph.						
		None ▾				
<input type="checkbox"/> Use Per-Graph Value (Ignore this Value)						
<b>Legend Direction (--legend-direction=&lt;direction&gt;)</b>						
Place the legend items in the given vertical order.						
		None ▾				
<input type="checkbox"/> Use Per-Graph Value (Ignore this Value)						
						Return Save

**Graph Template Items [edit graph: Host - Running Processes]**

**Graph Item Type**  
How data for this item is represented visually on the graph.

**Color**  
The color to use for the legend.

**Value**  
[HRULE][VRULE]: The value of the graph item.   
[TICK]: The fraction for the tick line.  
[SHIFT]: The time offset in seconds.

**Text Format**  
Text that will be displayed on the legend for this graph item.

**Insert Hard Return**  
Forces the legend to the next line after this item.  Insert Hard Return

**Dashes**  
(dashes[=on\_s[,off\_s[,on\_s,off\_s,...]])  
The dashes modifier enables dashed line style.

**Dash Offset (dash-offset=offset)**  
The dash-offset parameter specifies an offset into the pattern at which the stroke begins.

**Sequence**

**Graph Template Items [edit: Host - Running Processes]** Add

Graph Item	Data Source	Graph Item Type	CF Type	Alpha %	Item Color

Cancel

Save

## Import Templates

### Import Template from Local File

If the XML file containing template data is located on your local machine, select it here.

Datei auswählen cacti\_ho...ache.xml

### Import Template from Text

If you have the XML file containing template data as text, you can paste it into this box to import it.

### Preview Import Only

If checked, Cacti will not import the template, but rather compare the imported Template to the existing Template data. If you are acceptable of the change, you can them import.

Preview Import Only

### Remove Orphaned Graph Items

If checked, Cacti will delete any Graph Items from both the Graph Template and associated Graphs that are not included in the imported Graph Template.

Remove Orphaned Graph Items

### Data Source Profile

Select the Data Source Profile. The Data Source Profile controls polling interval, the data aggregation, and retention policy for the resulting Data Sources.

System Default ▼

Import

## Import Results

Cacti has imported the following items for the Template:

### CDEF

[success] Trend [new]  
[success] Apache - Calculate Bytes / Request [new]  
[success] Apache - Clean value for DEF a [new]  
[success] Apache - Clean value for DEF b [new]  
[success] Apache - Limit output to zero min and max [new]  
[success] Turn Bytes into Bits [unchanged]  
[success] Total All Data Sources [unchanged]  
[success] Apache - A plus B [new]  
[success] Apache - Calculate A as % of C [new]  
[success] Apache - Calculate B as % of C [new]

### GPRINT Preset

[success] Normal [unchanged]  
[success] Exact Numbers [unchanged]

### Data Input Method

[success] WebServer - Apache Statistics [new]

### Data Template

[success] WebServer - Apache Statistics [new]

### Graph Template

[success] WebServer - Apache Statistics - CPU Load [new]  
[success] WebServer - Apache Statistics - Thread Scoreboard [new]  
[success] WebServer - Apache Statistics - Bytes / Request [new]  
[success] WebServer - Apache Statistics - Hits / s [new]  
[success] WebServer - Apache Statistics - kBits / s [new]  
[success] WebServer - Apache Statistics - Thread Details [new]  
[success] WebServer - Apache Statistics - Thread Details (%) [new]

### Device Template

[success] WebServer - Apache [new]

## Export Templates

What would you like to export? Device Template ▼

### Available Templates [Device Template]

#### Device Template to Export

Choose the exact item to export to XML.

SNMP Enabled CentOS Server ▼

#### Include Dependencies

Some templates rely on other items in Cacti to function properly. It is highly recommended that you select this box or the resulting import may fail.

Include Dependencies

#### Output Format

Choose the format to output the resulting XML file in.

Output to the Browser (within Cacti)

Output to the Browser (raw XML)

Save File Locally

Export

```

[root@localhost cli]# php import_user.php /tmp/users_list.txt _CustomerA_user 0

It is highly recommended that you use the web interface to copy users as this script will only copy Local Cacti users.

Cacti User Copy Utility
Template User: _CustomerA_user
Realm: Local

Copying/Creating User...
New User: user1
New User: user2
New User: user3
New User: user4
User copied...
[root@localhost cli]# █

```

user1	User Name1	No	Local	ALLOW
user2	User Name2	No	Local	ALLOW
user3	User Name3	No	Local	ALLOW
user4	User Name4	No	Local	ALLOW
_CustomerA_user	Template User for Customer A	No	Local	ALLOW

## Cacti Installation Wizard

### Installation Type

Please select the type of installation

Installation options:

- **New Primary Server** - Choose this for the Primary site.
- **New Remote Poller** - Remote Pollers are used to access networks that are not readily accessible to the Primary site.

New Remote Poller

The following information has been determined from Cacti's configuration file. If it is not correct, please edit "include/config.php" before continuing.

#### Local Cacti database connection information

Database: **cacti**  
Database User: **cactiuser**  
Database Hostname: **localhost**  
Port: **3306**  
Server Operating System Type: **unix**

#### Remote Poller Cacti database connection information

Database: **cacti**  
Database User: **rcactiuser**  
Database Hostname: **192.168.44.134**  
Port: **3306**  
Server Operating System Type: **unix**

You are now logged into **Cacti**. You can follow these basic steps to get started.

- [Create devices](#) for network
- [Create graphs](#) for your new devices
- [View](#) your new graphs

Version 1.1.28

---

Remote Data Collector Status: *Online*

---

**NOTE:** You are logged into a Remote Data Collector. When **'online'**, you will be able to view and control much of the Main Cacti Web Site just as if you were logged into it. Also, it's important to note that Remote Data Collectors are required to use the Cacti's Performance Boosting Services **'On Demand Updating'** feature, and we always recommend using Spine. When the Remote Data Collector is **'offline'**, the Remote Data Collectors Web Site will contain much less information. However, it will cache all updates until the Main Cacti Database and Web Server are reachable. Then it will dump it's Boost table output back to the Main Cacti Database for updating.

**NOTE:** None of the Core Cacti Plugins, to date, have been re-designed to work with Remote Data Collectors. Therefore, Plugins such as MacTrack, and HMIB, which require direct access to devices will not work with Remote Data Collectors at this time. However, plugins such as Thold will work so long as the Remote Data Collector is in **'online'** mode.

### About Cacti

Cacti is a complete network graphing solution designed to harness the power of **RRDTool's** data storage and graphing functionality. Cacti provides a fast poller, advanced graph templating, multiple data acquisition methods, and user management features out of the box. All of this is wrapped in an intuitive, easy to use interface that makes sense for LAN-sized installations up to complex networks with thousands of devices.
