## Welcome

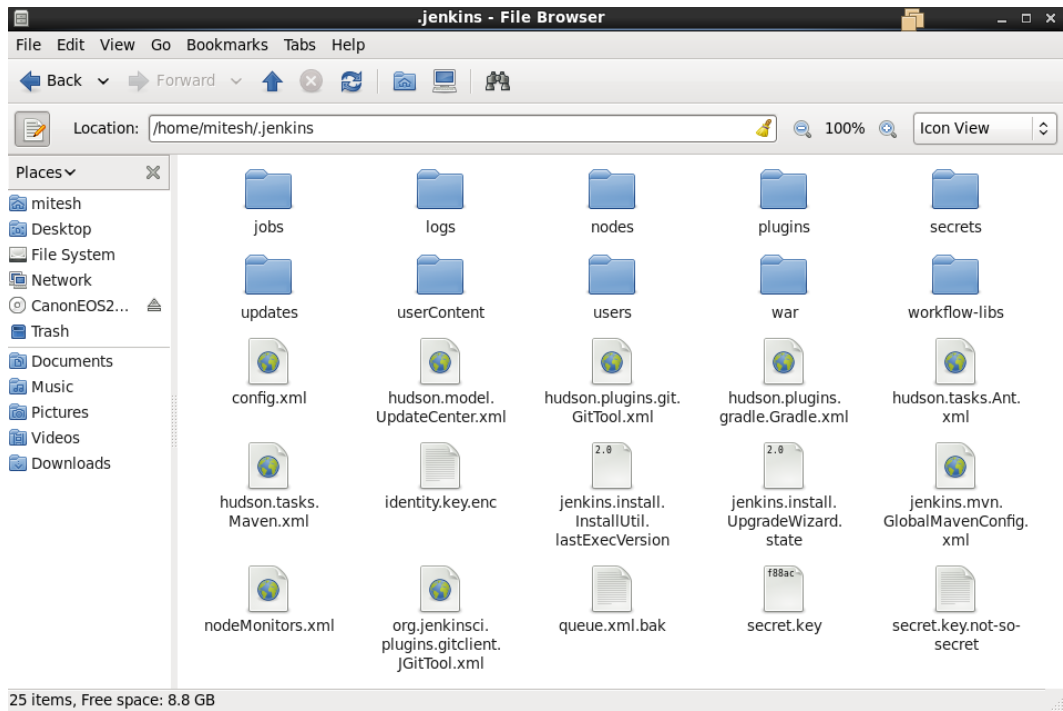

Virtual machines	Docker containers
 <p>The diagram shows three vertical columns representing different virtual machines. Each column contains three stacked boxes: 'App 1', 'App 2', and 'App 3' at the top; 'Bins/Libs' in the middle; and 'Guest OS' at the bottom. These three columns are stacked on top of a single grey box labeled 'Hypervisor'. Below the Hypervisor is a grey box labeled 'Host Operating System'. At the bottom is a dark blue box labeled 'Infrastructure' containing icons for a laptop, server racks, and a cloud. A URL <a href="http://www.docker.com/">http://www.docker.com/</a> is at the bottom.</p>	 <p>The diagram shows three vertical columns representing different containers. Each column contains two stacked boxes: 'App 1', 'App 2', and 'App 3' at the top; and 'Bins/Libs' in the middle. These three columns are stacked on top of a single blue box labeled 'Docker Engine'. Below the Docker Engine is a grey box labeled 'Operating System'. At the bottom is a dark blue box labeled 'Infrastructure' containing icons for a laptop, server racks, and a cloud. A URL <a href="http://www.docker.com/">http://www.docker.com/</a> is at the bottom.</p>
<p>Virtual machines depend on traditional virtualization. They can be considered hardware-level virtualization.</p>	<p>Containers depends on the containerization technique at the kernel level. They can be considered OS-level virtualization.</p>
<p>Each virtual machine contains a guest OS, binaries, library files, and the application itself.</p>	<p>Each container include application, binaries, and library files, but the major difference compared to virtual machine is the shared kernel: each container runs as an isolated process in the user-space on the host OS.</p>
<p>The size of a virtual machine is in the order of GBs, as each one runs on its own.</p>	<p>As each container runs as an isolated process in the user-space on the host OS and a separate OS is not required for each container, the size of each container is much smaller.</p>
<p>Each virtual machine has its own set of resources, which results in better isolation and less sharing of resources.</p>	<p>Each container shares the kernel, and hence, there's more scope of sharing resources.</p>
<p>A virtual machine cannot run on a container</p>	<p>A container can run on a virtual machine.</p>

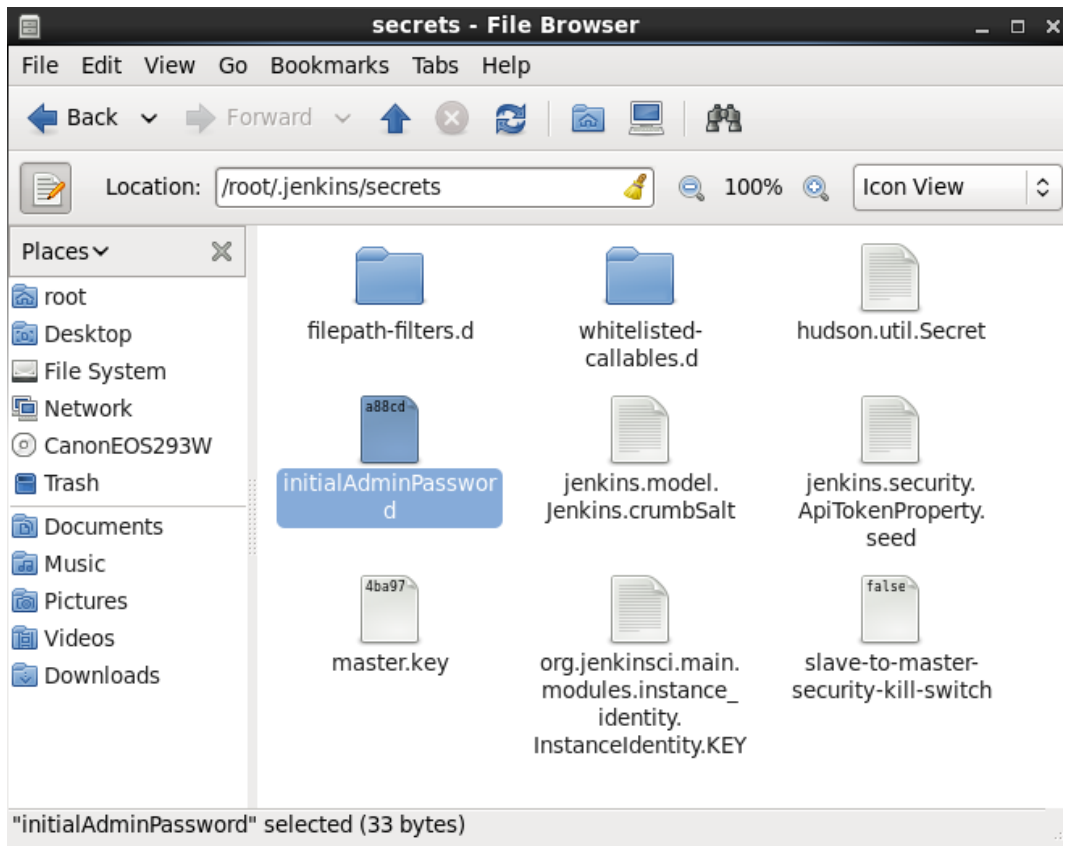

## Chapter 2: Continuous Integration with Jenkins 2

A terminal window titled 'root@devops1:~/Desktop' with a menu bar (File, Edit, View, Search, Terminal, Tabs, Help) and two tabs. The active tab shows the following log output:

```
INFO: Obtained the updated data file for hudson.tasks.Maven.MavenInstaller

```

## Unlock Jenkins

To ensure Jenkins is securely set up by the administrator, a password has been written to the log ([not sure where to find it?](#)) and this file on the server:

```
/root/.jenkins/secrets/initialAdminPassword
```

Please copy the password from either location and paste it below.

Administrator password

Continue

## Customize Jenkins

Plugins extend Jenkins with additional features to support many different needs.

### Install suggested plugins

Install plugins the Jenkins community finds most useful.

### Select plugins to install

Select and install plugins most suitable for your needs.

# Getting Started

## Manage Jenkins

Restore the previous version of Jenkins Downgrade to 2.0-rc-1

- [Configure System](#)  
Configure global settings and paths.
- [Configure Global Security](#)  
Secure Jenkins; define who is allowed to access/use the system.
- [Global Tool Configuration](#)  
Configure tools, their locations and automatic installers.
- [Reload Configuration from Disk](#)  
Discard all the loaded data in memory and reload everything from file system. Useful when you modified config files directly on disk.
- [Manage Plugins](#)  
Add, remove, disable or enable plugins that can extend the functionality of Jenkins.
- [System Information](#)  
Displays various environmental information to assist trouble-shooting.
- [System Log](#)  
System log captures output from `java.util.logging` output related to Jenkins.

### Enter an item name

*» Required field*

- Freestyle project**  
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.
- Pipeline**  
Orchestrates long-running activities that can span multiple build slaves. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- External Job**  
This type of job allows you to record the execution of a process run outside Jenkins, even on a remote machine. This is designed so that you can use Jenkins as a dashboard of your existing automation system. See [the documentation for more details](#).
- Multi-configuration project**  
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
- Folder**  
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.
- GitHub Organization**  
Scans a GitHub organization (or user account) for all repositories matching some defined markers.
- Multibranch Pipeline**  
Creates a set of Pipeline projects according to detected branches in one SCM repository.

### Build Triggers

- Trigger builds remotely (e.g., from scripts) ?
- Build after other projects are built ?
- Build periodically ?
- Build when a change is pushed to GitHub ?
- Poll SCM ?

### Build Environment

- Delete workspace before build starts
- Abort the build if it's stuck
- Add timestamps to the Console Output
- Use secret text(s) or file(s) ?

### Build

**Invoke top-level Maven targets** x ?

Node name

**Permanent Agent**

Adds a plain, permanent agent to Jenkins. This is called "permanent" because Jenkins doesn't provide higher level of integration with these agents, such as dynamic provisioning. Select this type if no other agent types apply — for example such as when you are adding a physical computer, virtual machines managed outside Jenkins, etc.

Welcome to SonarQube Dashboard  
 Since you are able to read this, it means that you have successfully started your SonarQube server. Well done!  
 If you have not removed this text, it also means that you have not yet played much with SonarQube. So here are a few pointers for your next step:

- » Do you now want to [run analysis](#) on a project?
- » Maybe start [customizing dashboards](#)?
- » Or simply browse the [complete documentation](#)?
- » If you have a question or an issue, please visit the [Get Support](#) page.

## Chapter 3: Building the Code and Configuring the Build Pipeline

### Enter an item name

» Required field

 **Freestyle project**  
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

 **Pipeline**  
Orchestrates long-running activities that can span multiple build slaves. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

 **Maven project**  
Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.

 **External Job**  
This type of job allows you to record the execution of a process run outside Jenkins, even on a remote machine. This is designed so that you can use Jenkins as a dashboard of your existing automation system. See [the documentation for more details](#).

 **Multi-configuration project**  
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

 **Folder**  
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

 **GitHub Organization**  
Scans a GitHub organization (or user account) for all repositories matching some defined markers.

 **Multibranch Pipeline**  
Creates a set of Pipeline projects according to detected branches in one SCM repository.

if you want to create a new item from other existing, you can use this option:

View name

**Build Pipeline View**  
Shows the jobs in a build pipeline view. The complete pipeline of jobs that a version propagates through are shown as a row in the view.

**Dashboard**  
Customizable view that contains various portlets containing information about your job(s)

**List View**  
Shows items in a simple list format. You can choose which jobs are to be displayed in which view.

**My View**  
This view automatically displays all the jobs that the current user has an access to.

General Source Code Management Build Triggers Build Environment Build **Post-build Actions**

**Build other projects** X ?

Projects to build

Trigger only if build is stable

Trigger even if the build is unstable

Trigger even if the build fails

**E-mail Notification** X ?

Recipients

Whitespace-separated list of recipient addresses. May reference build parameters like \$PARAM. E-mail will be sent when a build fails, becomes unstable or returns to stable.

Send e-mail for every unstable build

Send separate e-mails to individuals who broke the build ?

Add post-build action ▾

# Chapter 4: Installing and Configuring Chef

The screenshot shows the top portion of the Chef website. At the top left is the Chef logo. To the right is a navigation menu with links for 'EVENTS', 'BLOG', 'SUPPORT', 'ACCOUNT', and 'MANAGEMENT CONSOLE', followed by a search icon. Below this is a secondary menu with 'Products', 'Capabilities', 'Community', 'Learn Chef', and a prominent orange 'Get Started' button. The main banner features the headline 'AUTOMATE YOUR INFRASTRUCTURE' in large, bold letters, with 'INFRASTRUCTURE' in orange. Below the headline is the tagline 'Embrace DevOps. Achieve speed, scale and consistency with Chef.' and two buttons: 'Get Started' and 'Learn More →'. The banner also includes a laptop displaying the Chef Automate dashboard and a text box that reads 'CHEF AUTOMATE THINK IT TO SHIP IT' followed by a paragraph about automation and a 'Learn More about Chef Automate →' button. At the bottom of the page is a dark navigation bar with the 'CHEF MANAGE' logo. Below the navigation bar is a sign-in form with fields for 'Username or Email Address' and 'Password', a 'Sign In' button, and a 'Forgot your password?' link. To the right of the sign-in form is a grey box with the heading 'Don't have an account?' and a paragraph of text, ending with a 'Click here to get started!' link.

## Chapter 6: Cloud Provisioning and Configuration Management with Chef

The screenshot shows the AWS Management Console interface for the EC2 Dashboard in the US East (N. Virginia) region. The user is logged in as Mitesh Soni.

**Resources:**

- 1 Running Instances
- 0 Elastic IPs
- 0 Dedicated Hosts
- 0 Snapshots
- 1 Volumes
- 0 Load Balancers
- 2 Key Pairs
- 1 Security Groups
- 0 Placement Groups

**Account Attributes:**

- Supported Platforms: VPC
- Default VPC: vpc-6d0f6f09
- Resource ID length management

**Additional Information:**

- Getting Started Guide
- Documentation
- All EC2 Resources
- Forums
- Pricing
- Contact Us

**AWS Marketplace:**

- Find free software trial products in the AWS Marketplace from the EC2

**Create Instance:**

To start using Amazon EC2 you will want to launch a virtual server, known as an Amazon EC2 instance.

[Launch Instance](#)

Note: Your instances will launch in the US East (N. Virginia) region

### Security

Network ACLs

## Resources

Start VPC Wizard

Launch EC2 Instances

Note: Your Instances will launch in the US East (N. Virginia) region.

You are using the following Amazon VPC resources in the US East (N. Virginia) region:

1 VPC	1 Internet Gateway
4 Subnets	1 Route Table
1 Network ACL	0 Elastic IPs
0 VPC Peering Connections	0 Endpoints
0 Nat Gateways	1 Security Group
0 Running Instances	0 VPN Connections
0 Virtual Private Gateways	0 Customer Gateways

## VPN Connections

Amazon VPC enables you to use your own isolated resources within the AWS cloud, and then connect those resources directly to your own datacenter using industry-standard encrypted IPsec VPN connections.

## Create a web app

Choose a name and a platform for your app. You can start with a sample app or upload your own code. Then, you can configure more options before you deploy your app. By creating an app, you allow AWS Elastic Beanstalk to administer AWS resources and necessary permissions on your behalf. [Learn more.](#)

Application name

Maximum length of 100 characters, not including forward slash (/).

Platform

Tomcat 8 Java 8 (this can be updated after initial setup)

App code  Sample application

Comes with instructions on how to configure your application. You can upload a new source code for this app later.

Upload your own code

You can upload a file or provide a URL to your app code in Amazon S3.

All Applications > petclinic > petclinic (Environment ID: e-y2fmwri3n, URL: )

Actions

**Creating petclinic**  
This will take a few minutes

```

11:04pm Waiting for EC2 instances to launch. This may take a few minutes.
11:02pm Created EIP: 52.73.142.147
11:02pm Environment health has transitioned to Pending. Initialization in progress (running for 8 seconds). There are no instances.
11:02pm Created security group named:
awsseb-e-y2fmwri3n-stack-AWSEBSecurityGroup-E1E762FFSL5Q
11:01pm Using elasticbeanstalk-us-east-1-685239287657 as Amazon S3 storage bucket for environment data.
11:01pm createEnvironment is starting.

```

**Jenkins**  [Discover Techno](#) | [log out](#)

Jenkins > All >

### Enter an item name

» Required field

- 
**Freestyle project**  
 This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.
- 
**Pipeline**  
 Orchestrates long-running activities that can span multiple build slaves. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- 
**Maven project**  
 Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.
- 
**Build Flow**  
 Build Flow can manage job orchestration as a dedicated entity, in a centralized way with complex orchestration and without polluting the jobs with various plugins to handle the upstream-downstream chain.

Jenkins > All >

**Folder**  
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

**GitHub Organization**  
Scans a GitHub organization (or user account) for all repositories matching some defined markers.

**Multibranch Pipeline**  
Creates a set of Pipeline projects according to detected branches in one SCM repository.

---

if you want to create a new item from other existing, you can use this option:

Copy from

Microsoft Azure | DevOpsPetClinic > Settings > Set deployment credentials

## License Agreement

You must agree to the Nagios Software License Terms and Conditions before continuing using this software.

1.3 Licensed System. Configurations and installations of Nagios Software on computer hardware, computer systems, operating systems, embedded devices, and virtual appliances for which Customer has paid all applicable License Fees, and has agreed to be bound to the terms of this Agreement.

1.4 Derivative Product. Any product or service that results from the incorporation of, modification of, or integration with Nagios Software, whereby Nagios Software or the functionality of any part of Nagios Software becomes an integral part of the resulting product or service.

1.5 Permitted Use. The use of Nagios Software on Licensed Systems by Customer for internal business purposes only, without use in a Derivative Product, as a hosted service, or in any product or service intended for resale.

1.6 Support Plan. An annual, renewable phone or email support service subscription to which the Customer may optionally subscribe for Nagios Software by entering into a separate agreement with Nagios Enterprises.

1.7 Support Services. Technical support services provided to Customer under the terms of a Support Plan.

1.8 Software Update. Any enhancement to the current version of the Nagios Software that Nagios Enterprises generally releases or generally makes available to Nagios Enterprises' other customers. A Software Update is any new version of the Nagios Software denoted by a change in the version number (e.g. 2009R1 to 2009R2). Customer is responsible for acquiring, at their own cost, any updated or additional hardware, network resources, and software necessary to implement or use any Software Update.

1.9 License Fee. The then-current list price for the applicable Nagios Software purchased. All License Fees are due in advance of Permitted Use.

I have read, understood, and agree to be bound by the terms of the license above.

### Configuration Wizard: Linux Server - Step 1

Linux Server Information

IP Address:   
The IP address or FQDNS name of the Linux server you'd like to monitor.

Linux Distribution:   
The Linux distribution running on the server you'd like to monitor.

### Configuration Wizard: NRPE - Step 1

You have been sent here from the **Linux Server Wizard** because you selected **Other** as your linux type. The NRPE Wizard is a similar wizard with more customizability. **Don't forget! You will need to install NRPE just like you would in the Linux Server Wizard.**

### Server Information

IP Address:   
The IP address or FQDNS name of the server you'd like to monitor.

Operating System:   
The operating system running on the server you'd like to monitor.

## Configuration Wizard: NRPE - Step 2

### Server Details

---

IP Address:

Operating System:

Linux

Host Name:

The name you'd like to have associated with this host.

### NRPE Agent

---

Specify options that should be used to communicate with the remote NRPE agent.

SSL Encryption:

Determines whether or not data between the Nagios XI server and NRPE agent is encrypted.  
**Note:** Legacy NRPE installations may require that SSL support be disabled.

### Server Metrics

---

Specify which services you'd like to monitor for the server.

## Configuration Wizard: NRPE - Step 3

### Monitoring Settings

---

Define basic parameters that determine how the host and service(s) should be monitored.

**Under normal circumstances:**

Monitor the host and service(s) every  minutes.

**When a potential problem is first detected:**

Re-check the host and service(s) every  minutes up to  times before generating an alert.

[← Back](#)

[Next >](#)

[✓ Finish](#)

## Configuration Wizard: NRPE - Step 4

### Notification Settings

---

Define basic parameters that determine how notifications should be sent for the host and service(s).

#### When a problem is detected:

- Don't send any notifications
- Send a notification immediately
- Wait  minutes before sending a notification

#### If problems persist:

Send a notification every  minutes until the problem is resolved.

#### Send alert notifications to:

- Myself ([Adjust my settings](#))
- Other individual contacts
  - Default Contact (xi\_default\_contact)

## Configuration Wizard: NRPE - Step 5

### Host Groups

Define which hostgroup(s) the monitored host should belong to (if any).

Linux Servers (linux-servers)

## Configuration Wizard: NRPE - Final Step

### Final Settings

Click **Apply** to add your new configuration.

The screenshot shows the Nagios XI Home Dashboard. The top navigation bar includes the Nagios XI logo, a search icon, a user profile icon for 'nagiosadmin', and a 'Logout' link. A left-hand navigation menu is visible, categorized into 'Quick View', 'Details', and 'Graphs'. The main content area is titled 'Home Dashboard' and contains three primary widgets:

- Getting Started Guide:** A section with 'Common Tasks' and 'Getting Started' links. The 'Common Tasks' list includes links for 'Change your account settings', 'Change your notifications settings', and 'Configure your monitoring setup'. The 'Getting Started' section includes links for 'Learn about XI' and 'Signup for XI news'.
- Host Status Summary:** A table showing the status of hosts. The table has columns for 'Up', 'Down', 'Unreachable', and 'Pending'. The 'Up' count is 3, 'Down' is 0, 'Unreachable' is 0, and 'Pending' is 0. Below the table, it says 'Last Updated: 2016-07-16 13:33:13'.
- Service Status Summary:** A table showing the status of services. The table has columns for 'Ok', 'Warning', 'Unknown', 'Critical', and 'Pending'. The 'Ok' count is 15, 'Warning' is 1, 'Unknown' is 0, 'Critical' is 5, and 'Pending' is 0. Below the table, it says 'Last Updated: 2016-07-16 13:33:13'.

### HTTP Error 502.3 - Bad Gateway

The specified CGI application encountered an error and the server terminated the process.

#### Most likely causes:

- The CGI application did not return a valid set of HTTP errors.
- A server acting as a proxy or gateway was unable to process the request due to an error in a parent gateway.

#### Things you can try:

- Use DebugDiag to troubleshoot the CGI application.
- Determine if a proxy or gateway is responsible for this error.

#### Detailed Error Information:

<b>Module</b>	httpPlatformHandler	<b>Requested URL</b>	http://localhost:80/
<b>Notification</b>	ExecuteRequestHandler	<b>Physical Path</b>	D:\home\site\wwwroot
<b>Handler</b>	httpPlatformHandlerMain	<b>Logon Method</b>	Anonymous
<b>Error Code</b>	0x80072ee2	<b>Logon User</b>	Anonymous

### Add Application Insights

PREVIEW

## Enable Application Insights monitoring

To get telemetry about the performance and health of your Azure web app and its dependencies, monitor it using Application Insights.

**Application Insights extension installation is complete!**

If you have traffic to your web app, or have added an availability test, then the data will light up in approximately 3 minutes.

[Monitor Azure web app performance](#)

While we're getting you set up...

```
graph TD; Client[Client: DevOpsPetClinic] --> AJAX[AJAX]; Server[Server: DevOpsPetClinic] --> AJAX; Server --> HTTP[HTTP]; Server --> SQL[SQL]; Availability[Availability] --> Server;
```

The diagram illustrates the application map for DevOpsPetClinic. It shows the following components and their dependencies:

- Client: DevOpsPetClinic**: Get client side load, performance & failure telemetry. It depends on **AJAX**.
- Server: DevOpsPetClinic**: Follow instructions on the right. It depends on **AJAX**, **HTTP**, and **SQL**.
- Availability**: Monitor availability with tests running 24x7 from up to 16 locations. It depends on the **Server: DevOpsPetClinic**.
- AJAX**: Monitor AJAX dependencies.
- HTTP**: Monitor HTTP dependencies.
- SQL**: Monitor SQL dependencies.

C:\apache-tomcat-7.0.70\newrelic>java -jar newrelic.jar install
**** ( o) New Relic Java Agent Installer

**** Installing version 3.30.1 ...

* Backed up start script to C:\apache-tomcat-7.0.70\bin\catalina.bat.20160724_180719

* Added agent switch to start script C:\apache-tomcat-7.0.70\bin\catalina.bat

* No need to create New Relic configuration file because:
  A config file already exists: C:\apache-tomcat-7.0.70\newrelic\newrelic.yml

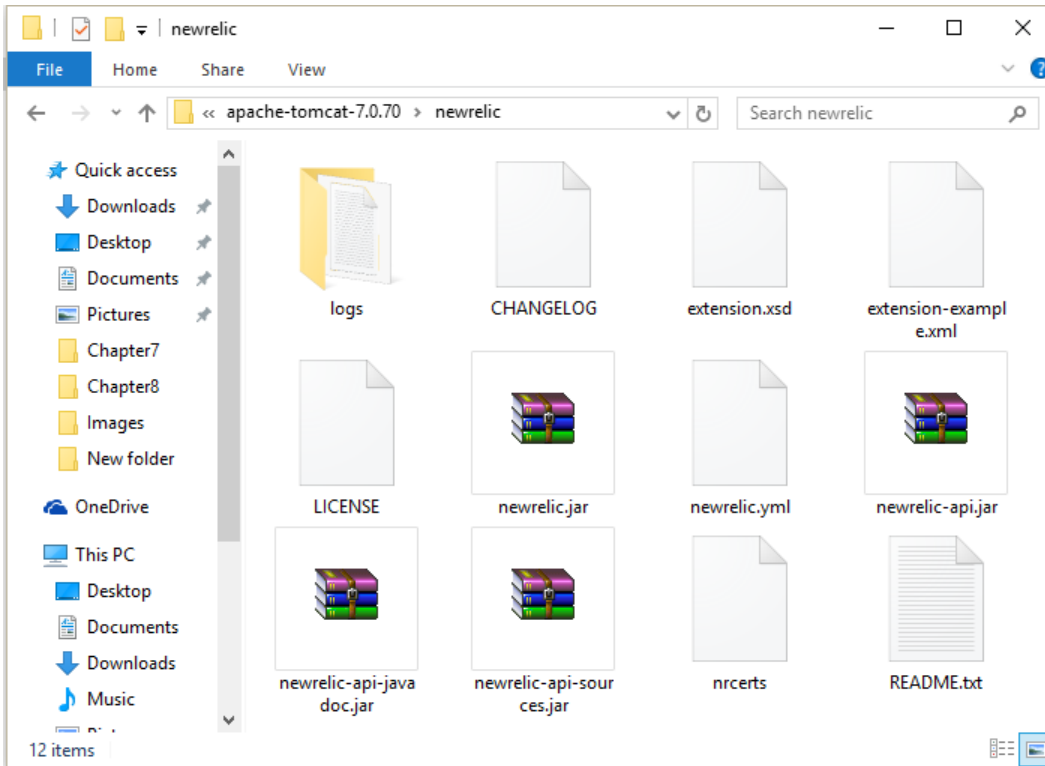

**** Install successful

**** Next steps:
You're almost done! To see performance data for your app:

1) Restart your app server
2) Exercise your app
3) Log into http://rpm.newrelic.com

Within two minutes, your app should show up, ready to monitor and troubleshoot.
If app data doesn't appear, check newrelic/logs/newrelic_agent.log for errors.

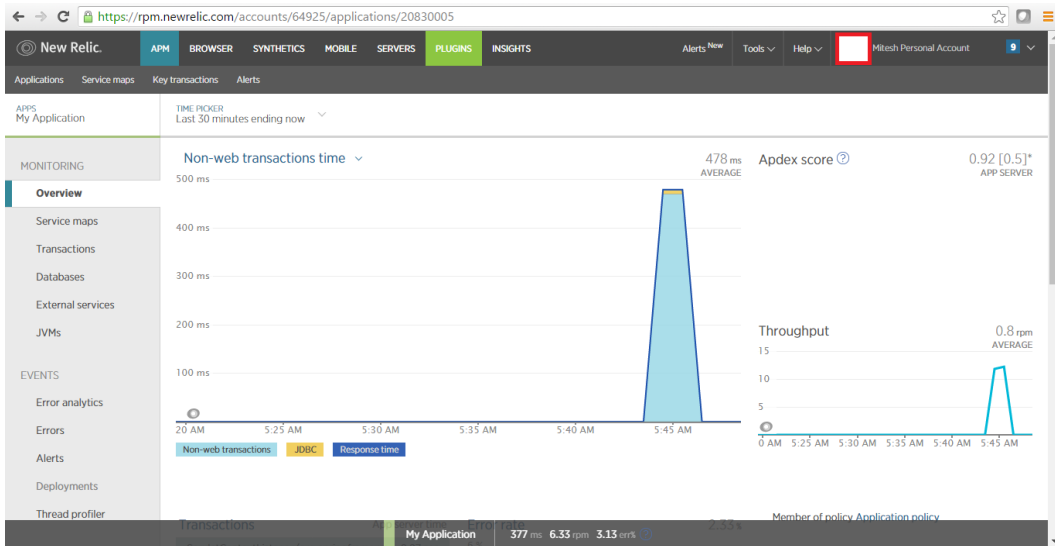

C:\apache-tomcat-7.0.70\newrelic>

The screenshot shows the AWS Management Console interface. The top navigation bar includes 'AWS Services', 'Edit', and user information 'Mitesh N. Virginia Support'. The left sidebar contains navigation options like 'EC2 Dashboard', 'Events', 'Tags', 'Reports', 'Limits', 'INSTANCES', 'Spot Requests', 'Reserved Instances', 'Scheduled Instances', 'Dedicated Hosts', 'IMAGES', 'AMIs', 'Bundle Tasks', 'ELASTIC BLOCK STORE', 'Volumes', and 'Snapshots'. The main content area displays a table of instances with columns for Name, Instance ID, Instance Type, Availability Zone, Instance State, Status Checks, Alarm Status, and Public DNS. One instance is listed: 'DevOpsVMonAWS' with ID 'i-075fa68dc0e6a8b14', type 't2.micro', and state 'running'. Below the table, the details for this instance are shown, including its Public DNS, Public IP, Elastic IPs, Availability zone, Security groups, Scheduled events, and AMI ID.

Name	Instance ID	Instance Type	Availability Zone	Instance State	Status Checks	Alarm Status	Pub
DevOpsVMonAWS	i-075fa68dc0e6a8b14	t2.micro	us-east-1b	running	Initializing	None	ec2-

**Instance:** i-075fa68dc0e6a8b14 (DevOpsVMonAWS) Public DNS: ec2-52-23-172-228.compute-1.amazonaws.com

Description	Status Checks	Monitoring	Tags
Instance ID	i-075fa68dc0e6a8b14	Public DNS	ec2-52-23-172-228.compute-1.amazonaws.com

The screenshot shows the Jenkins interface for a build pipeline. At the top, there's a search bar and user information 'DiscoverTechno | log out'. The main heading is 'Build Pipeline: First Pet-Clinic Build Pipeline'. Below this, there are icons for 'Run', 'History', 'Configure', 'Add Step', 'Delete', and 'Manage'. The pipeline consists of four steps: 'PetClinic-Compile' (Build No. #36), 'PetClinic-Test' (Build No. #55), 'PetClinic-CloudProvisioning' (Build No. #13), and 'PetClinic-Deploy' (Build No. #75). Below the main pipeline view, there are two rows of detailed build information for Pipeline #36 and Pipeline #35. Pipeline #36 shows steps #36 (Compile, 28 sec), #55 (Test, 38 sec), #13 (CloudProvisioning, 1 min 43 sec), and PetClinic-Deploy (N/A). Pipeline #35 shows steps #35 (Compile, 45 sec), #54 (Test, 40 sec), #12 (CloudProvisioning, 1 min 6 sec), and PetClinic-Deploy (N/A).

The screenshot shows the Jenkins web interface for a pipeline named "Build Pipeline: First Pet-Clinic Build Pipeline". At the top, there are navigation links for "Run", "History", "Configure", "Add Step", "Delete", and "Manage". Below this, a summary view shows four stages: "PetClinic-Compile" (Build No. #36), "PetClinic-Test" (Build No. #55), "PetClinic-CloudProvisioning" (Build No. #13), and "PetClinic-Deploy" (Build No. #79). The main area displays a grid of build job cards for two different pipeline runs, #36 and #35. Each card shows the stage name, build number, start time, and duration. For example, in Pipeline #36, the "PetClinic-Test" job (#55) started at 12:44:33 PM and took 30 seconds. The "PetClinic-Deploy" job (#79) started at 1:11:34 PM and took 13 minutes. The interface also includes a search bar, "DiscoverTechno" link, and "log out" button at the top right.

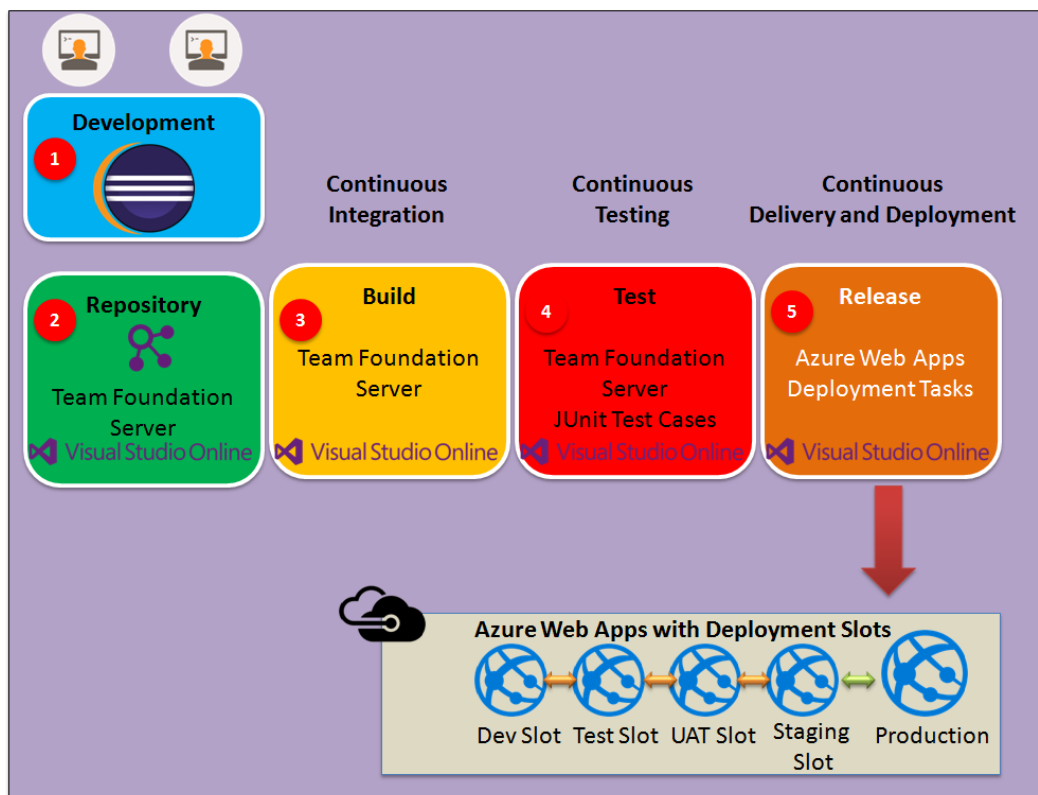

- AWS SDK or other options can be used
- Code Chekout
