```
root@26f56807db17:/application# php artisan -h migrate
Usage:
  migrate [options]

Options:
      --database[=DATABASE]  The database connection to use.
      --force                Force the operation to run when in production.
      --path[=PATH]          The path of migrations files to be executed.
      --pretend              Dump the SQL queries that would be run.
      --seed                 Indicates if the seed task should be re-run.
      --step                 Force the migrations to be run so they can be rolled back individually.
  -h, --help                 Display this help message
  -q, --quiet                Do not output any message
  -V, --version              Display this application version
      --ansi                 Force ANSI output
      --no-ansi              Disable ANSI output
  -n, --no-interaction       Do not ask any interactive question
      --env[=ENV]            The environment the command should run under.
  -v|vv|vvv, --verbose       Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and
3 for debug

Help:
 Run the database migrations
root@26f56807db17:/application#
```

```
root@26f56807db17:/application# php artisan -h make:controller
Usage:
  make:controller [options] [--] <name>

Arguments:
  name                  The name of the class

Options:
      --resource        Generate a resource controller class.
  -h, --help            Display this help message
  -q, --quiet           Do not output any message
  -V, --version         Display this application version
      --ansi            Force ANSI output
      --no-ansi         Disable ANSI output
  -n, --no-interaction  Do not ask any interactive question
      --env[=ENV]       The environment the command should run under.
  -v|vv|vvv, --verbose  Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and 3 for
 debug

Help:
 Create a new controller class
root@26f56807db17:/application#
```

```
