## Roles

### Application Developer

API consumers granted self-service access rights to discover and register APIs, view API documentation, and manage applications using the Developer Portal.

3

### Gateway Manager

Operations team members responsible for deploying, registering, and managing gateways. May also manage API deployments to their gateways when issued the Deploy API grant by an API Manager.

3

### API Manager

People responsible for managing the API lifecycle, which includes designing, implementing, and versioning APIs. Also responsible for managing grants and applications, providing API documentation, and monitoring API performance.

3

### Gateway Runtime

This role indicates a service account used to communicate from the gateway to the portal.

2

### Service Manager

People responsible for managing resources defining backend services. This includes for example managing service accounts.

3

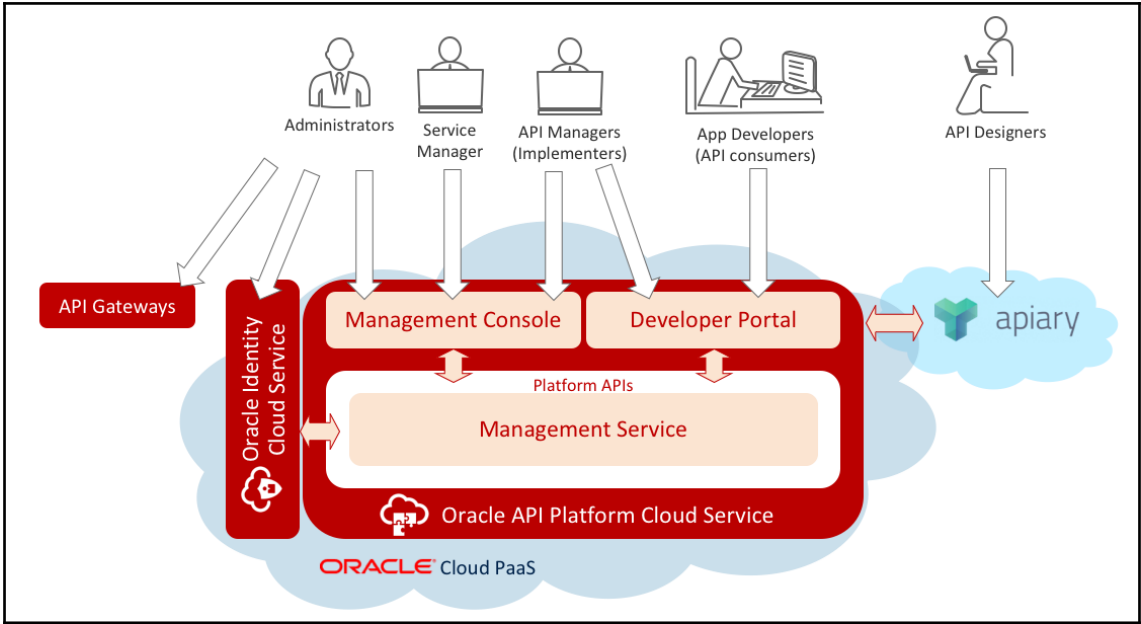

### Administrator

System Administrators responsible for assigning people roles in the system. Administrators possess the rights of all other roles and rights to all objects in the system.

## Test Your API

- 1 Make sure you have [Node](#) and [NPM](#) installed.  

```
$ npm install -g dredd
```
- 2 Initialize Dredd. Mind the privacy of API key.  

```
$ dredd init -r apiary -j apiaryApiKey:7454fbe5494028587de670a606da0c7b -j apiaryApiName:samp1e533
```
- 3 Run the test, reports appear here.  

```
$ dredd
```

### Sample Settings

mysample7

**API Domain**  
Your public documentation, and all apiary.io goodness and tweaks, lives in your very own, shiny 3rd-level subdomain (docs.mysample7.apiary.io) & at app.apiary.io/mysample7. Example: bee.apiary.io. Letters and numbers only, please.

mysample7

**CORS**  
Automatically add Cross-Origin Request Headers to all mock resources.

**Proxy**  
Act as a proxy to your real API (specified in the HOST of the API Blueprint or the host property of the Swagger document)

**Remove API Project**  
This action CANNOT be undone. This will permanently delete the [API Description Document](#), generated [documentation](#), traffic history, comments and all other data bound to this API.  
Please type in your API subdomain.  
subdomain

**Ownership and visibility settings**

API Owner:  
**Luis Weir**  
Sample is a personal project owned by Luis Weir.  
With a team project you will have these options:

**Private Documentation**  
Only logged-in Owners, Viewers and Editors can see the documentation.

**Private Description Document**  
Private API Description Document can be viewed only by editors and viewers. Turn off Private Document to share your work with other API enthusiasts.

OK

The screenshot shows the Apiary documentation interface. On the left, under the heading "Documentation", there are two tabs: "HTML" and "Markdown". Below these is a blue button with the Apiary logo and the text "Apiary", which is highlighted with a red box and labeled with the number "1". An arrow points from this button to the right. At the top right, there is a dark grey header "Select API Project" with a user profile icon. Below this is a search bar with the placeholder text "Find an API Project...", highlighted with a red box and labeled with the number "2". Below the search bar is a list of API projects, with the first one, "MRA Media Catalogue API", highlighted with a red box and labeled with the number "3". This project entry includes a checkmark, the name "MRA Media Catalogue API", the subtext "apiary · mramediacatalogueapi · Luis Weir", and a share icon. Below the project list is a "Connect" section with the text "Create link to Apiary" and a green "Connect" button, which is highlighted with a red box and labeled with the number "4".

A close-up view of two buttons: a light blue "Discard" button and a blue "Save Changes" button. The "Save Changes" button is highlighted with a red box.

The screenshot shows the Apify API testing interface. At the top, there's a header for 'MRA Media Catalogue API' by Luis Weir. Below the header are tabs for 'Local Development', 'Continuous Integration', 'Post-Deployment', and 'Tutorial'. The main heading is 'Test Your API'. There are three numbered steps:

1. Make sure you have Node and NPM installed.  
\$ npm install -g dredd
2. Initialize Dredd. Mind the privacy of API key.  
\$ dredd init -r apiary -j apiaryApiKey:5259748f13b1f60890ed5666c135b0d7 -j apiaryApiName:mramediacatalogueapi
3. Run the test, reports appear here.  
\$ dredd

```
$ dredd init -r apiary -j apiaryApiKey:5259748f13b1f60890ed5666c135b0d7 -j apiaryApiName:mramediacatalogueapi
? Location of the API description document apiary.apib
? Command to start API backend server e.g. (bundle exec rails server)
? URL of tested API endpoint http://oc-144-21-66-168.compute.oraclecloud.com:8001
? Programming language of hooks nodejs
? Dredd is best served with Continuous Integration. Create CircleCI config for Dredd? No

Configuration saved to dredd.yml

Run test now, with:

$ dredd
```

```

Home > Summary of Security Realms

**Summary of Security Realms**

A security realm is a container for the mechanisms—including users, groups, security roles, security policies, and security providers—that are used to protect WebLogic resources. You can have multiple active security realms in a WebLogic Server domain, but only one can be set as the default security realm, which is reserved for domain administrative purposes.

This Security Realms page lists each security realm that has been configured in this WebLogic Server domain. Click the name of the realm to explore and configure that realm.

[Customize this table](#)

Click the **Lock & Edit** button in the Change Center to modify the settings on this page.

---

Use this page to configure the general behavior of this security realm.

**Note:** If you are implementing security using JACC (Java Authorization Contract for Containers as defined in JSR 115), you must use the DD Only security model. Other WebLogic Server models are not available and the security functions for Web applications and EJBs in the Administration Console are disabled.

<b>Name:</b>	myrealm	The name of this security realm. <a href="#">More Info...</a>
<b>Security Model Default:</b>	<input type="text" value="DD Only"/>	Specifies the default security model for Web applications or EJBs that are secured by this security realm. You can override this default during deployment. <a href="#">More Info...</a>
<input checked="" type="checkbox"/> <b>Combined Role Mapping Enabled</b>		Determines how the role mappings in the Enterprise Application, Web application, and EJB containers interact. This setting is valid only for Web applications and EJBs that use the Advanced security model and that initialize roles from deployment descriptors. <a href="#">More Info...</a>
<input type="checkbox"/> <b>Use Authorization Providers to Protect JMX Access</b>		Configures the WebLogic Server MBean servers to use the security realm's Authorization providers to determine whether a JMX client has permission to access an MBean attribute or invoke an MBean operation. <a href="#">More Info...</a>
<input type="checkbox"/> <b>Automatically Restart After Non-Dynamic Changes</b>		Specifies whether the Realm will be auto-restarted if non-dynamic changes are made to the realm or providers within the realm. <a href="#">More Info...</a>
<b>Retire Timeout:</b>	<input type="text" value="60"/>	Specifies the retire timeout for a realm that is restarted. The old realm will be shutdown after the specified timeout period has elapsed. <a href="#">More Info...</a>

# Chapter 6: Defining Policies for APIs

The screenshot shows the 'APIs' management console for 'MRA Media Catalogue' (version 1.0, Published, Alpha). The main section is 'API Implementation' for 'MRA Media Catalogue API'. It shows a sequence of messages: 'API Request catalogue' and 'Service Request https://.../catalogue' under the 'Request' column, and 'API Response catalogue' and 'Service Response https://.../catalogue' under the 'Response' column. To the right, under 'Available Policies', there is a list of policy categories: Security, Traffic Management, Interface Management, Routing, and Other. A 'Show Editable' link is visible in the top right corner.

## Apply Policy - API Rate Limiting | 1.0

Enforces a limit on the total number of requests to this API. Rejects any requests above the defined limit.  
NOTE: this is different than the application-based rate limiting. [Learn More](#)

### Your Policy Name

Enter an item name

\* Required field

**Freestyle project**

This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

**Pipeline**

Orchestrates long-running activities that can span multiple build slaves. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

**Multi-configuration project**

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

**Folder**

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

**GitHub Organization**

Scans a GitHub organization (or user account) for all repositories matching some defined markers.

**Multibranch Pipeline**

Creates a set of Pipeline projects according to detected branches in one SCM repository.

Finish

The screenshot shows the Oracle account activation and password setup process. On the left, the Oracle logo is at the top, followed by the text "Hello Sean Parker," and "Your MRA account is ready. To get started, [activate your account](#)." Below this is a yellow button labeled "Activate Your Account" with a red box around it and a red number "1" next to it. Below the button is a "Details" section with a URL and an important note: "Important: This link will expire on Monday, March 19, 2018 4:15:27 PM CDT." On the right, a "Set a new password for your user account" dialog is shown. It has a "User Name" field with "sean.parker" and two "New Password" fields (one with "\*\*\*\*\*" and one with "Confirm New Password"). A green "Submit" button is at the bottom of the dialog, with a red box around it and a red number "2" next to it. To the right of the dialog is a "Password Criteria" section with a list of requirements, all marked with green checkmarks: "The password must have at least 8 characters.", "The password cannot exceed 40 characters.", "The password cannot contain the First Name of the user.", "The password cannot contain the Last Name of the user.", "The password cannot contain the user name.", "The password must have at least 1 lowercase characters.", "The password must have at least 1 uppercase characters.", "The password must have at least 1 numeric characters.", "Cannot repeat the Current Password", and "The password cannot contain the whitespaces."
