

Chapter 1: Concepts of Continuous Integration

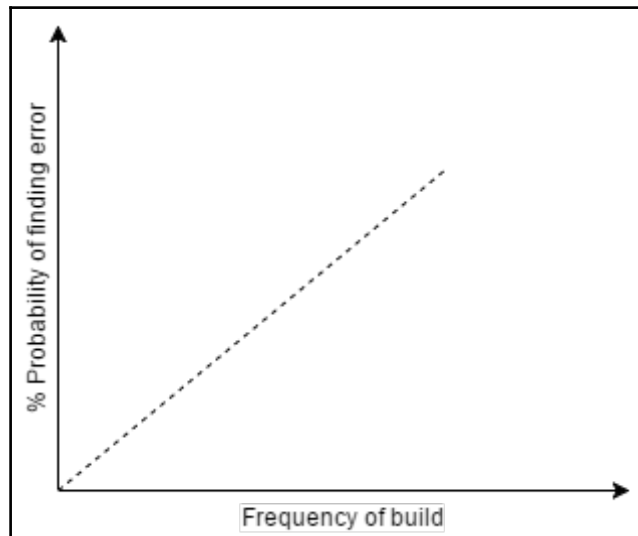

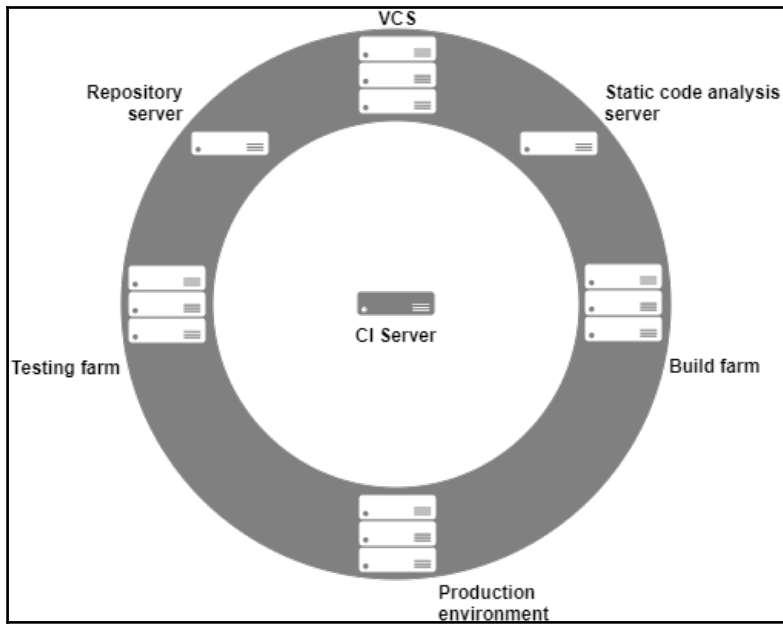

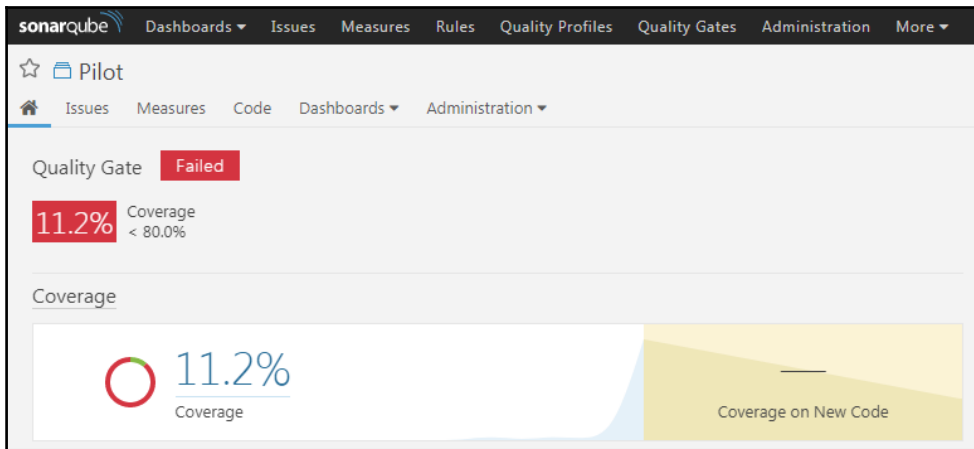

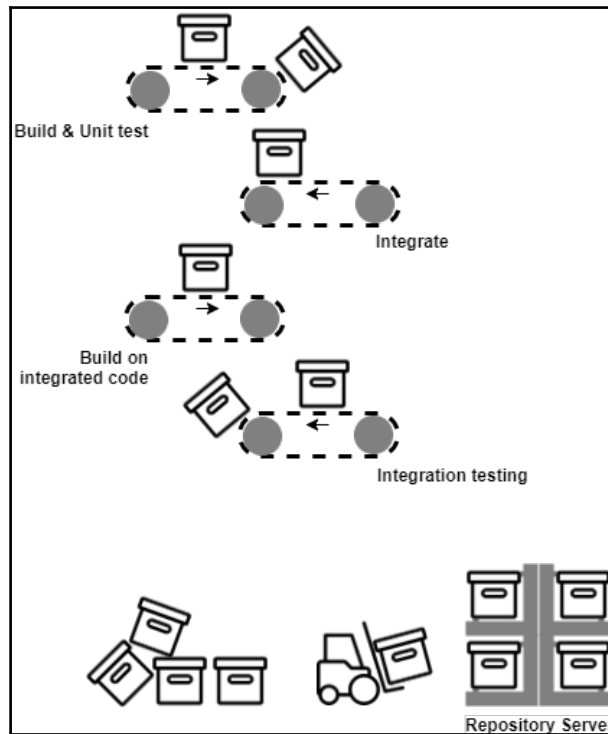

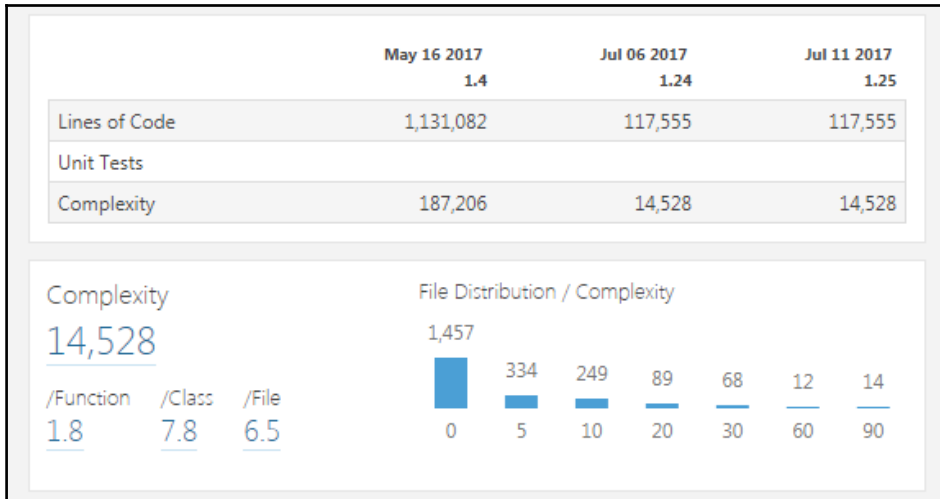

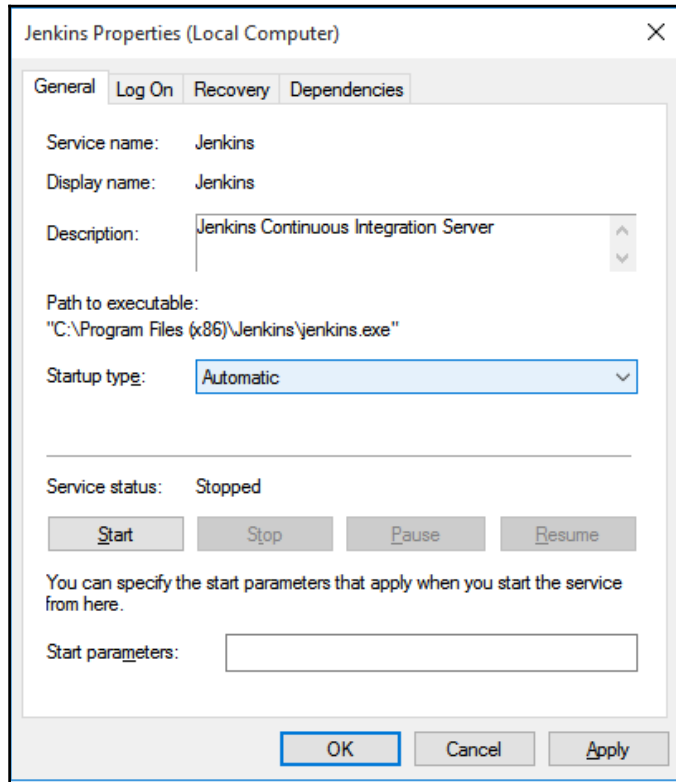

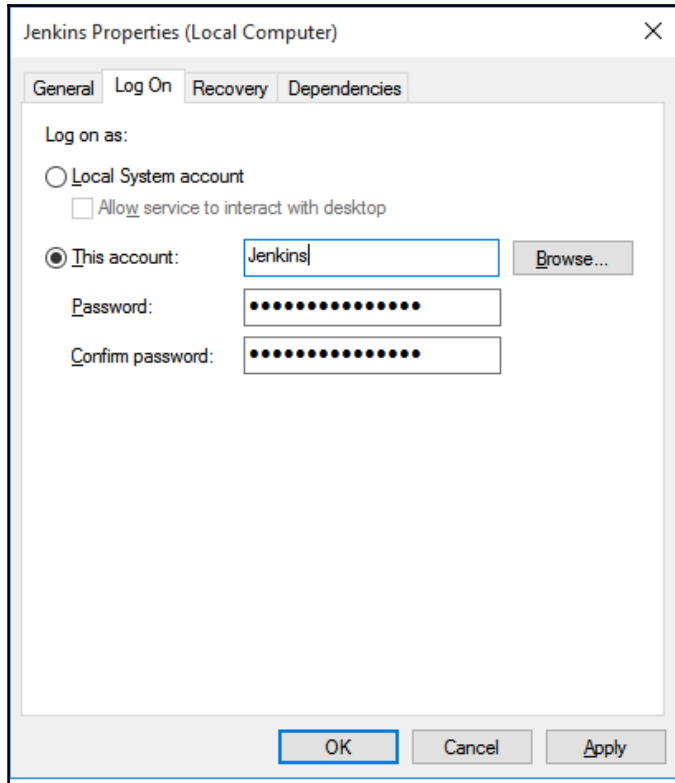

The Custom dashboard provides a summary of various metrics. It includes a total issue count, technical debt, and a breakdown of issue severity levels.

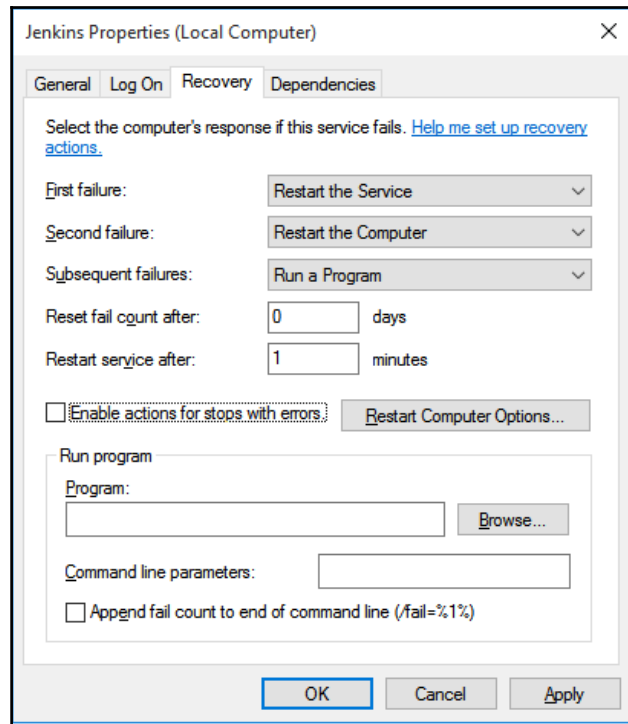

Metric	Value
Issues	184
Technical Debt	1d 4h
Reliability Remediation Effort	1d 1h
Security Remediation Effort	0
Blocker	1
Critical	20
Major	83
Minor	78
Info	2

Chapter 2: Installing Jenkins

Your connection is not private

Attackers might be trying to steal your information from _____ (for example, passwords, messages, or credit cards). NET::ERR_CERT_AUTHORITY_INVALID

Automatically report details of possible security incidents to Google. [Privacy policy](#)

ADVANCED

[Back to safety](#)

Your connection is not private

Attackers might be trying to steal your information from **192.168.56.104** (for example, passwords, messages, or credit cards). NET::ERR_CERT_AUTHORITY_INVALID

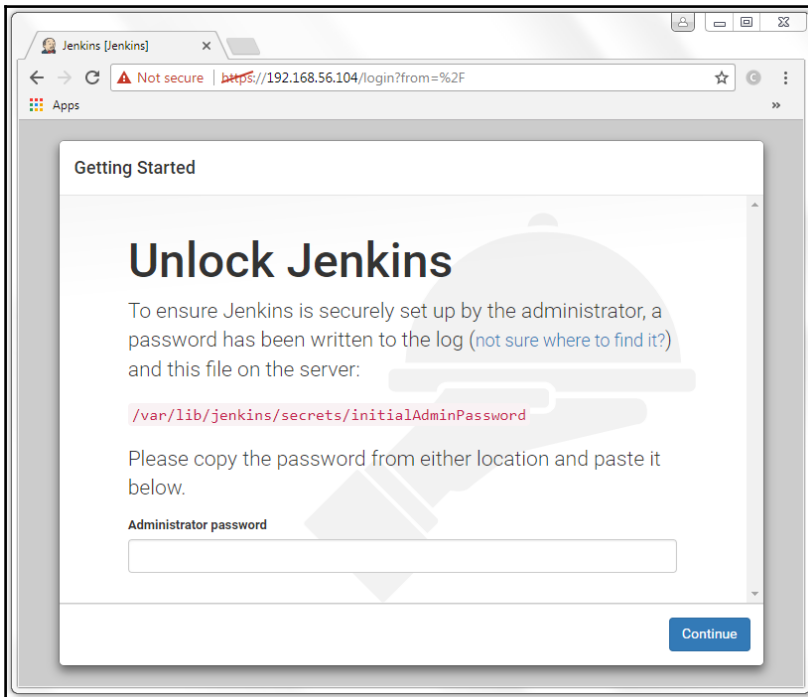

Automatically send some [system information and page content](#) to Google to help detect dangerous apps and sites. [Privacy policy](#)

HIDE ADVANCED

[Back to safety](#)

This server could not prove that it is **192.168.56.104**; its security certificate is not trusted by your computer's operating system. This may be caused by a misconfiguration or an attacker intercepting your connection. [Learn more](#).

Organization and Administration (2/3)

Dashboard View 9

Jenkins view that shows various cuts of build information via configured portlets.

Folders Plugin 1

This plugin allows users to create "folders" to organize jobs. Users can define custom taxonomies (like by project type, organization type etc). Folders are nestable and you can define views within folders. Maintained by CloudBees, Inc.

OWASP Markup Formatter Plugin 3

Uses policy definitions to allow limited HTML markup in user-submitted text.

Build Features (4/10)

build-name-setter 6

build timeout plugin 15

Aborts a build if it's taking too long

Config File Provider Plugin 5

Ability to provide configuration files (e.g. settings.xml for maven, XML, groovy, custom files,...) loaded through the UI which will be copied to the job workspace

Jenkins 2.60.2

List of Steps	Step configuration
Overview <p>This Snippet Generator will help you learn the Pipeline Script code which can be used to define various steps. Pick a step you are interested in from the list, configure it, click Generate Pipeline Script, and you will see a Pipeline Script statement that would call the step with that configuration. You may copy and paste the whole statement into your script, or pick up just the options you care about. (Most parameters are optional and can be omitted in your script, leaving them at default values.)</p> Steps	
Sample Step	archiveArtifacts: Archive the artifacts

Chapter 6: Installing SonarQube and Artifactory

Tokens

If you want to enforce security by not providing credentials of a real SonarQube user to run your code scan or to invoke web services, you can provide a User Token as a replacement of the user login. This will increase the security of your installation by not letting your analysis user's password going through your network.

NAME	CREATED	
jenkins-sonarqube	October 29, 2017	Revoke

Generate Tokens

New token "jenkins-sonarqube" has been created. Make sure you copy it now, you won't be able to see it again!

ID

Description

Node name

Permanent Agent
Adds a plain, permanent agent to Jenkins. This is called "permanent" because Jenkins doesn't provide higher level of integration with these agents, such as dynamic provisioning. Select this type if no other agent types apply — for example such as when you are adding a physical computer, virtual machines managed outside Jenkins, etc.

Appendix: Supporting Tools and Installation Guide

The screenshot shows the 'Downloads' section of the Git website. On the left, there are three platform icons: 'Mac OS X' with an Apple logo, 'Windows' with the Windows logo, and 'Linux/Unix' with a penguin logo. Below these is a note: 'Older releases are available and the Git source repository is on GitHub.' On the right, a computer monitor displays the 'Latest source Release 2.15.1' with a 'Download 2.15.1 for Windows' button. The monitor screen also shows 'Release Notes (2017-11-28)'.

The screenshot shows the 'Git 2.15.1.2 Setup' window. The title bar reads 'Git 2.15.1.2 Setup'. The main heading is 'Select Components' with the question 'Which components should be installed?'. Below this is a list of components with checkboxes, all of which are checked:

- Additional icons
 - On the Desktop
- Windows Explorer integration
- Git Bash Here
- Git GUI Here
- Git LFS (Large File Support)
- Associate .git* configuration files with the default text editor
- Associate .sh files to be run with Bash
- Use a TrueType font in all console windows
- Check daily for Git for Windows updates

Below the list, it states: 'Current selection requires at least 226,7 MB of disk space.' At the bottom, there is a URL: <https://git-for-windows.github.io/> and three buttons: '< Back', 'Next >', and 'Cancel'.
