Amazon EC2
Amazon Elastic Compute Cloud (Amazon EC2) is a web service that provides resizable compute capacity in the cloud. It is designed to make web-scale cloud computing easier for developers.
Amazon EC2's simple web service interface allows you to obtain and configure capacity with minimal friction. It provides you with complete control of your computing resources and lets you run on Amazon's proven computing environment. Amazon EC2 reduces the time required to obtain and boot new server instances to minutes, allowing you to quickly scale capacity, both up and down, as your computing requirements change. Amazon EC2 changes the economics of computing by allowing you to pay only for capacity that you actually use. Amazon EC2 provides developers the tools to build failure resilient applications and isolate themselves from common failure scenarios.
Introduction to Amazon EC2 (4:01)
Launch an Amazon EC2 Instance for Free
Try Amazon EC2 for Free
AWS Free Tier includes 750 hours of Linux and Windows t2.micro instances each month for one year. To stay within the Free Tier, use only EC2 Micro instances.

Step 2: Choose an Instance Type
Amazon EC2 provides a wide selection of instance types optimized to fit different use cases. Instances are virtual servers that can run applications. They have varying combinations of CPU, memory, storage, and networking capacity, and give you the flexibility to choose the appropriate mix of resources for your applications. Learn more about instance types and how they can meet your computing needs.

Select an existing key pair or create a new key pair
A key pair consists of a public key that AWS stores, and a private key file that you store. Together, they allow you to connect to your instance securely. For Windows AMIs, the private key file is required to obtain the password used to log into your instance. For Linux AMIs, the private key file allows you to securely SSH into your instance.
Note: The selected key pair will be added to the set of keys authorized for this instance. Learn more about removing existing key pairs from a public AMI.

Grouped Products
A grouped product is made up of multiple, standalone products that are presented as a group. You can offer variations of a single product, or group them by season or theme to create a coordinated set. Each product can be purchased separately, or as part of the group.

About us
With more than 230 stores spanning 43 states and growing, Luma is a nationally recognized active wear manufacturer and retailer. We're passionate about active lifestyles – and it goes way beyond apparel.
At Luma, wellness is a way of life. We don't believe age, gender or past actions define you, only your ambition and desire for wholeness... today.
We differentiate ourselves through a combination of unique designs and styles merged with unequaled standards of quality and authenticity. Our founders have deep roots in yoga and health communities and our selections serve amateur practitioners and professional athletes alike.

Request API Credentials - Paypal
API credentials consist of three elements:
An API username
An API password
Either an API signature or an API SSL client-side certificate
If you're using a shopping cart or solution provider, ask whether you need an API signature or a certificate.
Request API signature if your shopping cart or solution provider has asked for an API username, password, and signature, or if you're developing a custom shopping cart.
Request API certificate if your shopping cart or solution provider requires a file-based certificate.
Need help deciding which credential is right for your needs? Learn more
By clicking Agree and Submit, I agree to the API License Agreement and Terms of Use

Step 4: System Upgrade
We will take your store offline to protect shoppers during the duration of the upgrade activity.
Before you start upgrade, you can optionally configure a custom maintenance page that informs shoppers the store is offline. (Magento provides a default page.)
We're ready to upgrade magento/product-community-edition to 2.1.4.
