

Chapter 1: Social Media, Social Data, and Python

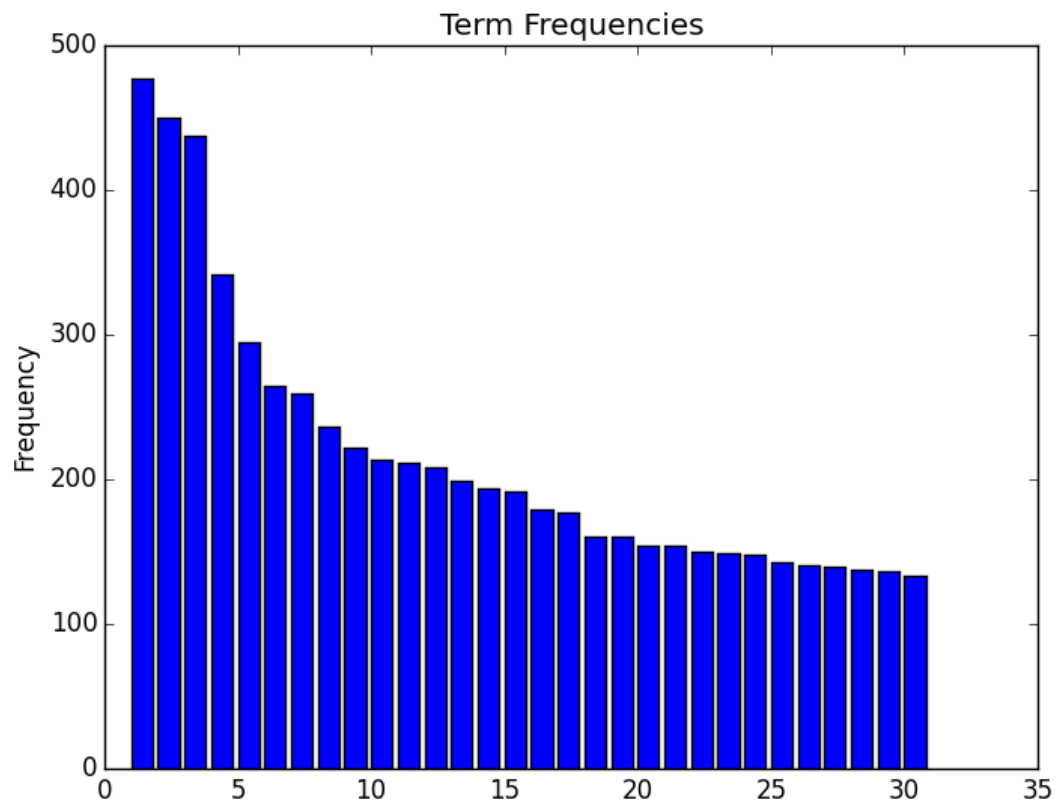

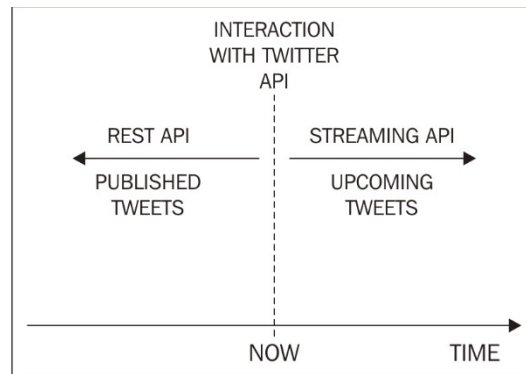

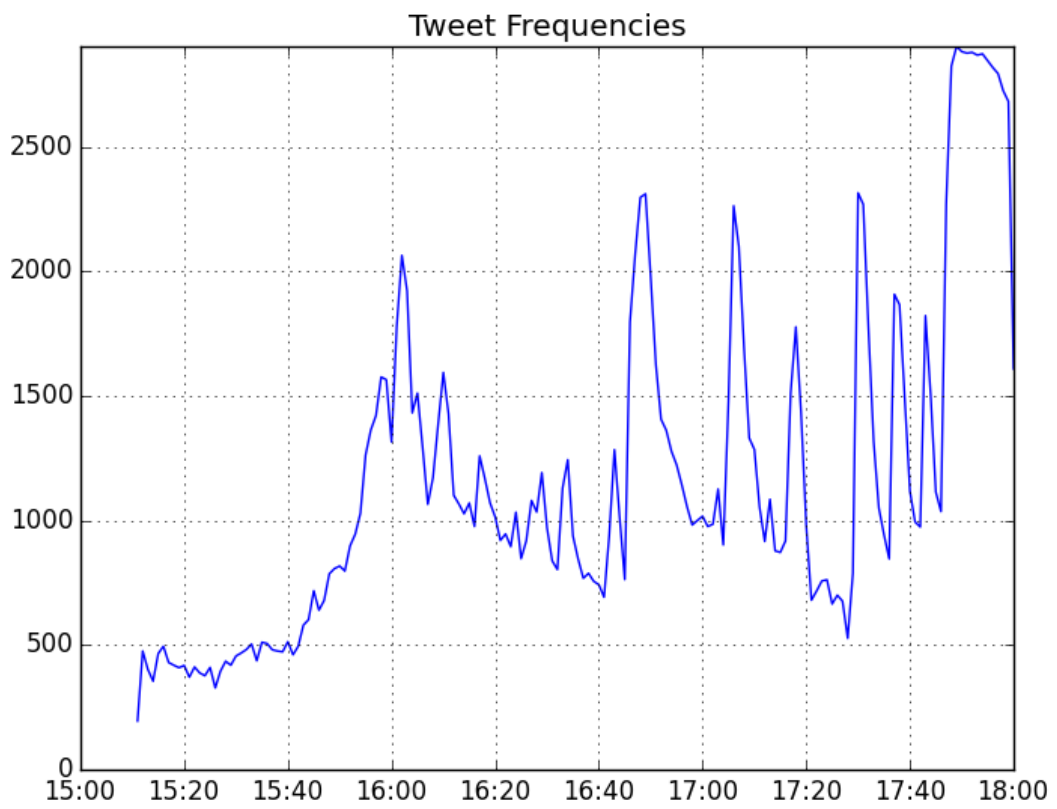

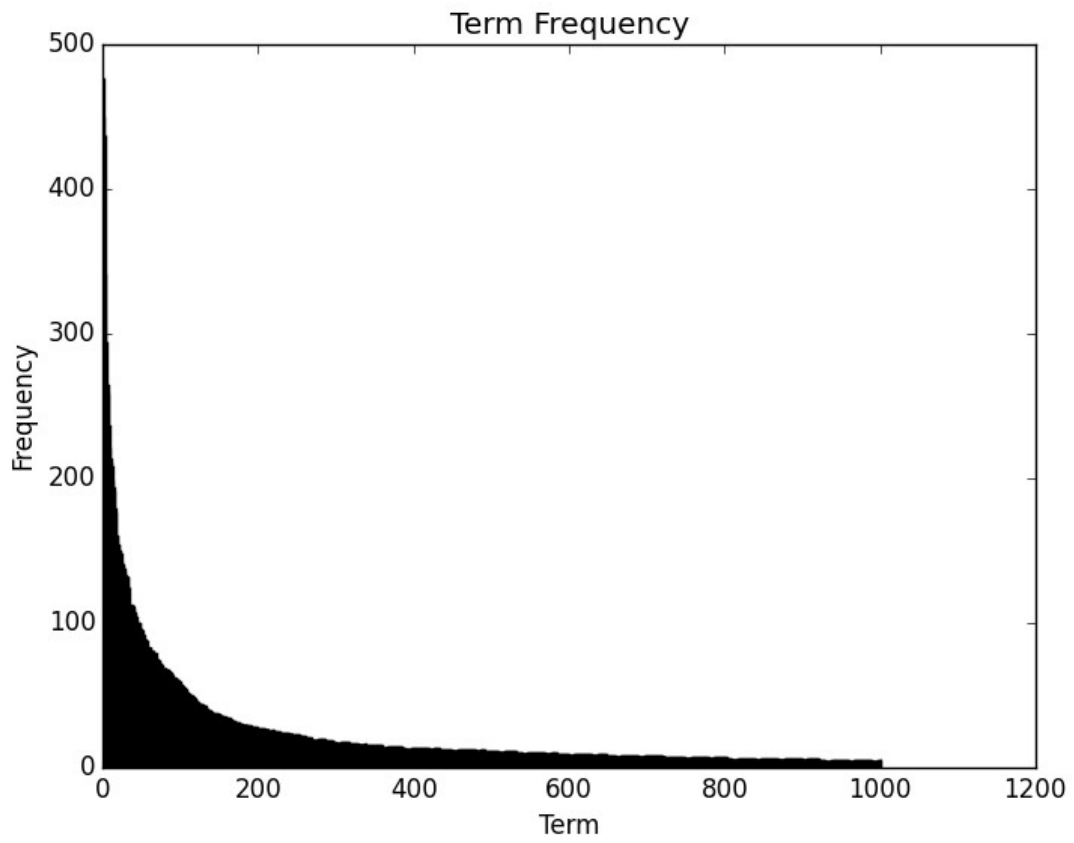

The screenshot shows a web browser window with the address bar containing "jsonviewer.stack.hu". Below the address bar, there are two tabs: "Viewer" (selected) and "Text". The main content area displays a JSON object in a tree view:

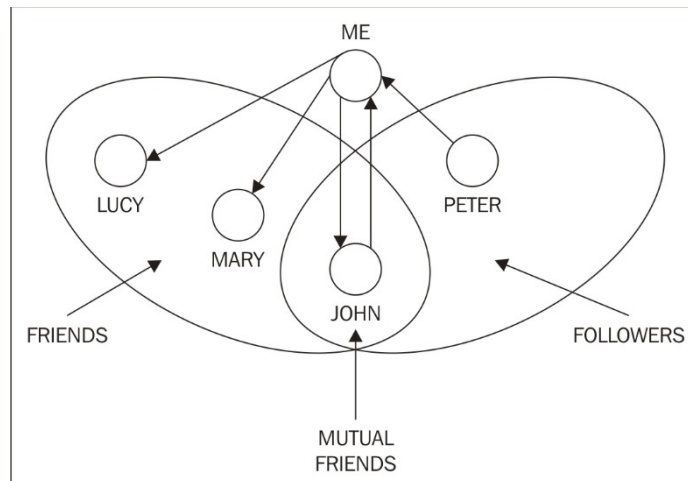

```
{  
  "user_id": "1",  
  "name": "Marco",  
  "likes": [  
    "Python",  
    "Data Mining"  
  ]  
}
```

Create App ID

The screenshot shows the Facebook App Dashboard for an application named "Social Media Mining". On the left is a navigation menu with options: Dashboard, Settings, Status & Review, App Details, Roles, Open Graph, Alerts, Localize, and Canvas Payments. The main content area has a "Dashboard" header. Below it is the app's profile picture and name "Social Media Mining", with a note that the app is in development mode. Key information displayed includes the App ID (redacted), API Version (v2.5), and App Secret (redacted with a "Show" button). There are two main sections: "Get Started with the Facebook SDK" with a "Choose a Platform" button, and "Secure Your App Settings" with a "Try It Now" button.

The screenshot shows the Facebook Graph API Explorer interface. At the top right, the "Application" is set to "Social Media Mining". Below this, there is an "Access Token" field with a redacted token and a "Get Token" dropdown menu. The dropdown menu is open, showing options: "Get User Access Token", "Get App Token", "Uninstall the app", and "Get Page Access Token". In the center, there is a "Graph API" tab and an "FQL Query" input field containing the query: "GET → /v2.5 /me?fields=id,name". To the right of the query field are "Debug Enabled" and "Learn more about" buttons.

Overview

Credentials

Credentials OAuth consent screen Domain verification

API key
Identifies your project using a simple API key to check quota and access.
For APIs like Google Translate.

OAuth client ID
Requests user consent so that your app can access the user's data.
For APIs like Google Calendar.

Service account key
Enables server-to-server, app-level authentication using robot accounts.
For use with Google Cloud APIs.

Help me choose
Asks a few questions to help you decide which type of credential to use.
