

Chapter 2: Setting Up Your Environment

Windows Assessment and Deployment Kit for Windows 8.1

Specify Location

Install the Windows Assessment and Deployment Kit for Windows 8.1 to this computer

Install Path:

Download the Windows Assessment and Deployment Kit for Windows 8.1 for installation on a separate computer

Download Path:

Estimated disk space required: 4.0 GB
 Disk space available: 291.4 GB

Windows Assessment and Deployment Kit for Windows 8.1

Select the features you want to install

Click a feature name for more information.

- Application Compatibility Toolkit (ACT)
- Deployment Tools**
- Windows Preinstallation Environment (Windows PE)
- User State Migration Tool (USMT)
- Volume Activation Management Tool (VAMT)
- Windows Performance Toolkit
- Windows Assessment Services
- Microsoft SQL Server 2012 Express

Deployment Tools

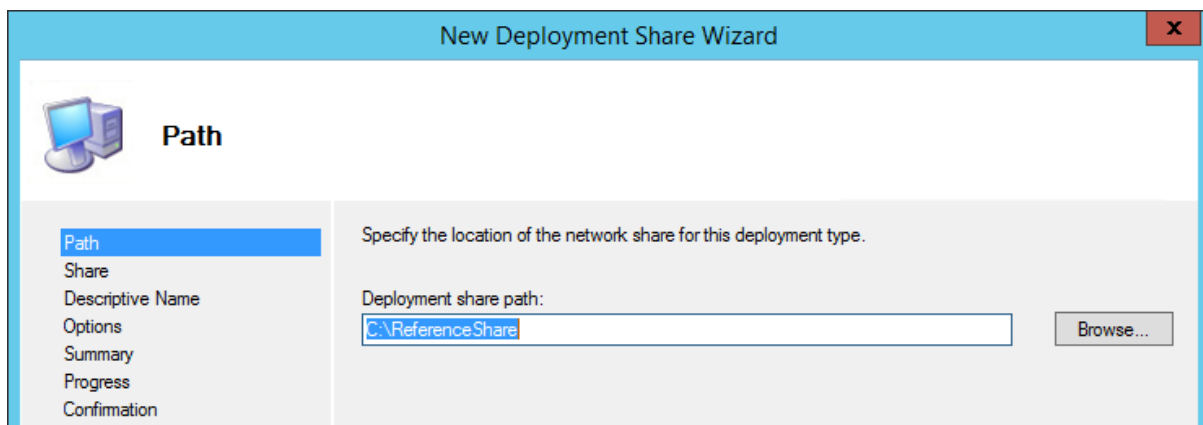

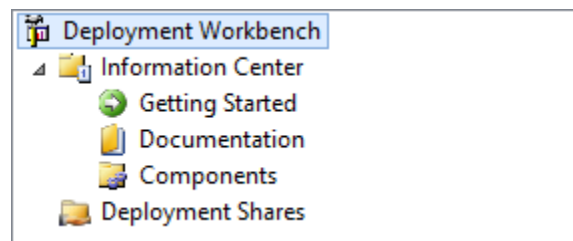

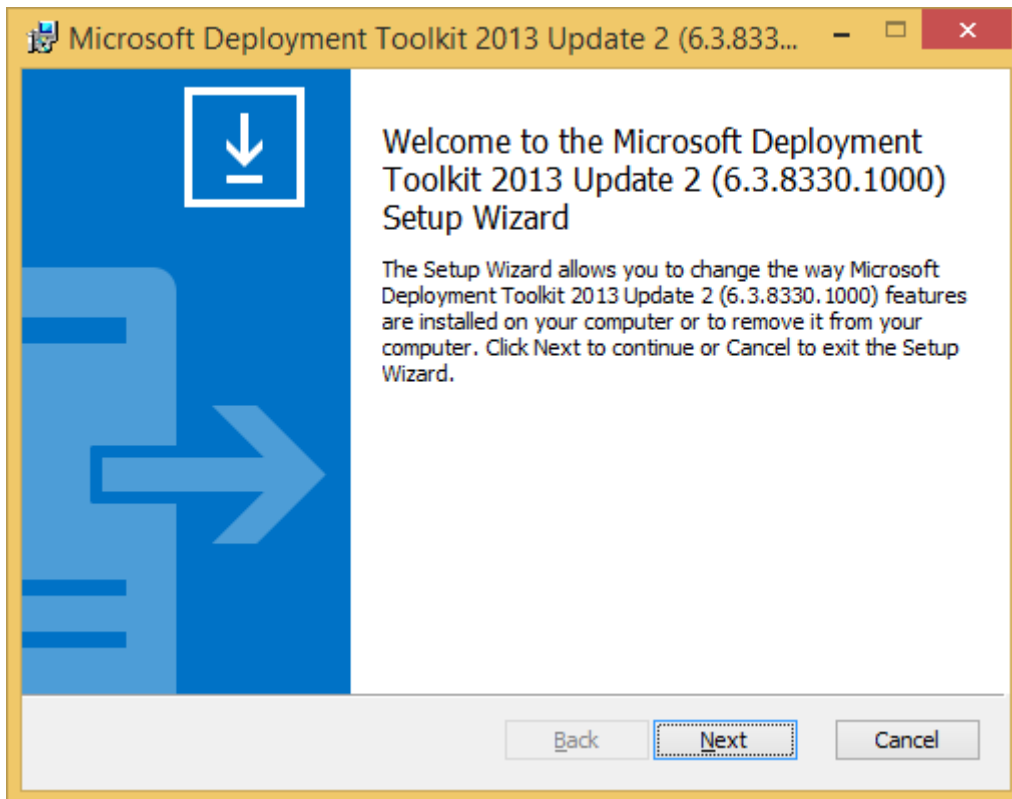

Size: 47.2 MB

Tools to customize and manage Windows images and to automate installation.

Includes:

- Deployment Image Servicing and Management (DISM) tool. To use DISM cmdlets, [PowerShell 3.0](#) must also be installed.
- OEM Activation 3.0 Tool.
- Windows System Image Manager (SIM).
- OSCDIMG, BCDBoot, DISMAPI, WIMGAPI, and other tools and interfaces.

Estimated disk space required: 3.1 GB
 Disk space available: 288.9 GB

When performing deployments, the behavior of the Deployment Wizard can be customized by turning various wizard panes on or off. For those that are not desired, modify the defaults below as appropriate.

- Ask if a computer backup should be performed.
- Ask for a product key.
- Ask to set the local Administrator password.
- Ask if an image should be captured.
- Ask if BitLocker should be enabled.

These settings can be changed later by modifying the rules defined for the deployment share.

When performing deployments, the behavior of the Deployment Wizard can be customized by turning various wizard panes on or off. For those that are not desired, modify the defaults below as appropriate.

- Ask if a computer backup should be performed.
- Ask for a product key.
- Ask to set the local Administrator password.
- Ask if an image should be captured.
- Ask if BitLocker should be enabled.

These settings can be changed later by modifying the rules defined for the deployment share.

Update Deployment Share Wizard

Options

Options
Summary
Progress
Confirmation

When updating the deployment share, the latest tools will be copied to the deployment share. If any changes have been made to the boot image settings or to the content that needs to be included in the boot image, those updates will also be made.

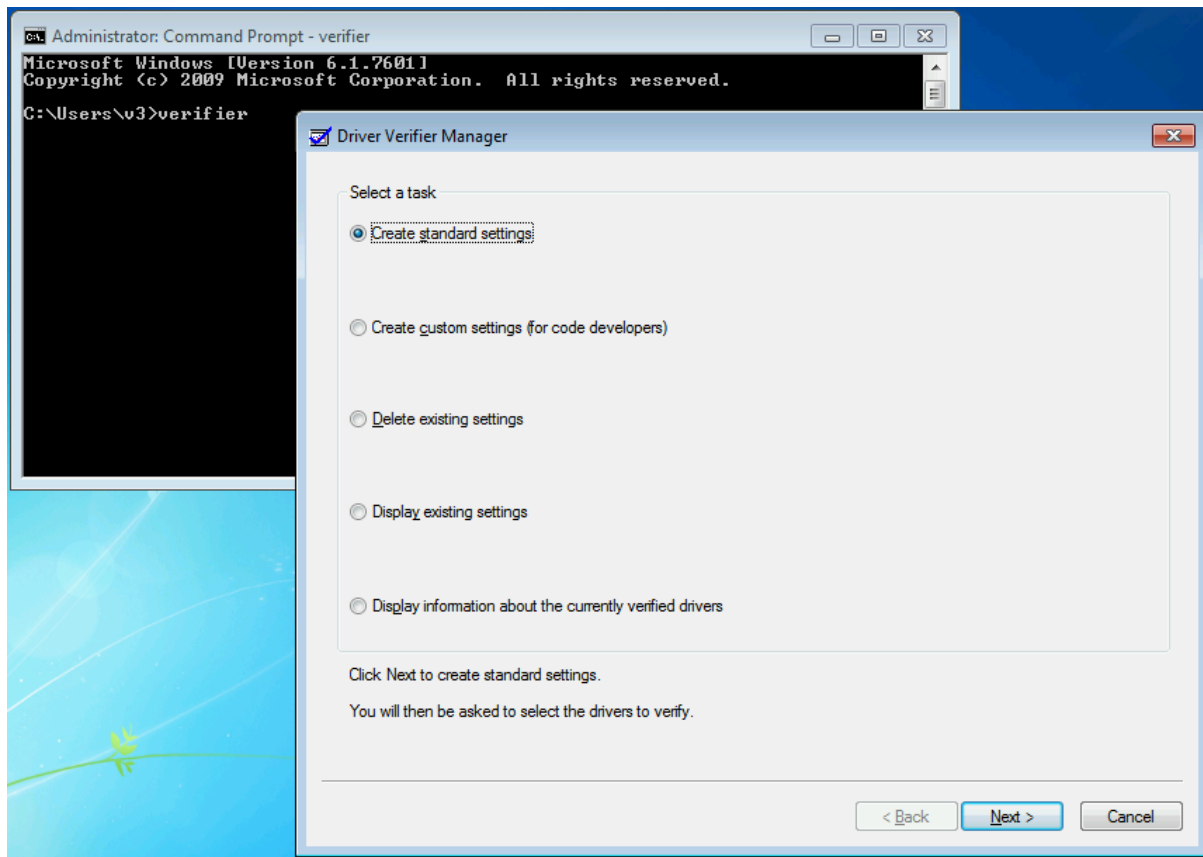

If necessary, you can choose to completely regenerate the boot images, or to compress the existing boot

Optimize the boot image updating process.

- Compress the boot image contents to recover space used by removed or modified content.

 Completely regenerate the boot images.

Run Individual Assessments

Double-click an assessment from the list to continue.

- Boot performance (Fast Startup)**
Measures boot and shutdown times when using Fast Startup, and identifies components that might cause delays.
Approximate run time: 2 hours
Version: 6.3.9600.17029
Supported architecture: x86,x64
Author: Microsoft Corporation
[More information](#)
- Boot performance (Full Boot)**
Measures the overall duration of full boot and shutdown.
- Driver verification**
Identifies issues with devices and drivers.
- File handling**
Measures the duration of common file functions, such as copy, move, delete, and zip.
- First boot performance**
Identifies issues that affect the first startup boot performance.
- Hibernate performance**
Measures time to hibernate/resume, and identifies components that might cause delays.
- Internet Explorer browsing performance**
The Internet Explorer® browsing performance assessment measures the quality of the browsing experience and
- Internet Explorer Security Software impact**
The Internet Explorer Security Software impact assessment measures the primary performance attributes of Inter
- Internet Explorer startup performance**
Measures the time to launch the Internet Explorer process, when the Internet Explorer process has already been l
- Media transcoding performance**
Measures the process of changing a video file to a different format or bit rate.
- Memory footprint**
Measures overall system memory usage, focusing on driver allocations and dynamic allocations.
- Minifilter diagnostic: Boot performance (Fast Startup)**
Identifies performance issues with minifilter drivers during system boot.
- Minifilter diagnostic: File handling**
Identifies performance issues with minifilter drivers while performing common file functions, such as copy, move, i
- Minifilter diagnostic: Internet Explorer**
Identifies performance issues with minifilter drivers during Internet Explorer launch.

CompleteDeployment.cmd
This script is part of Windows Assessment Services(WAS) and is used in the following scenarios:
- to inventory a new machine from the full OS into a WAS Server.
- to notify WAS server that an OS has been deployed successfully on this machine.
This script configures the machine for autologon and reboots the machine.
After reboot, the machine automatically preps the machine for use by the WAS Server.
Please press Y to Continue, N to abort:

- **Create a custom job**
Create a custom job using assessments that are designed for general use.
- **Create a job from a template**
Create a job by using a preconfigured template.
- **Create an energy efficiency job**
Create an energy efficiency job using assessments that are designed to run as workloads. Energy efficiency jobs assess the efficiency of direct current (DC) power, or the life of a battery under conditions simulated by the workloads.

Filter assessments

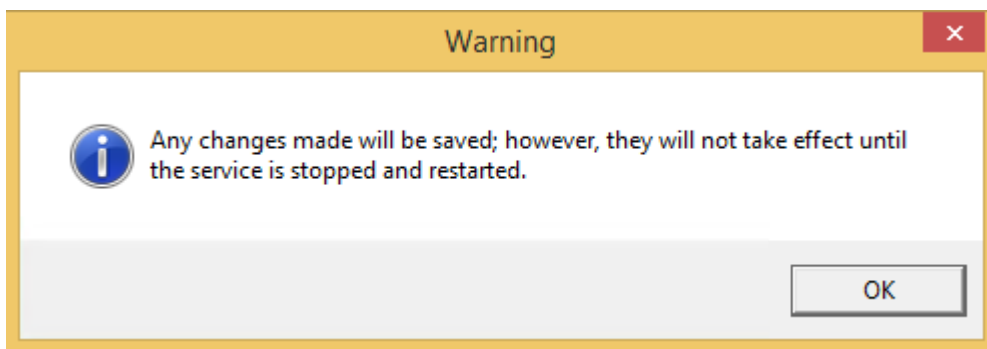

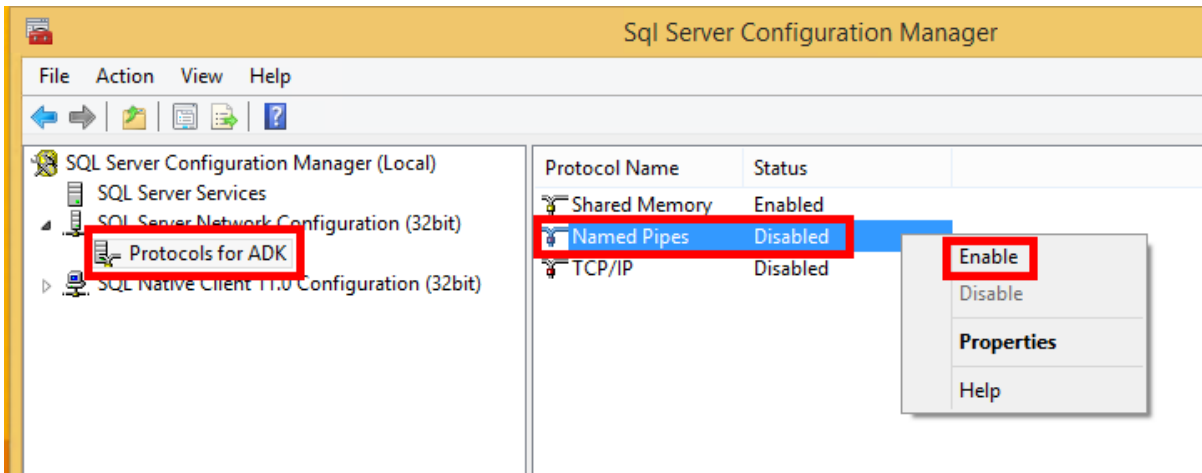

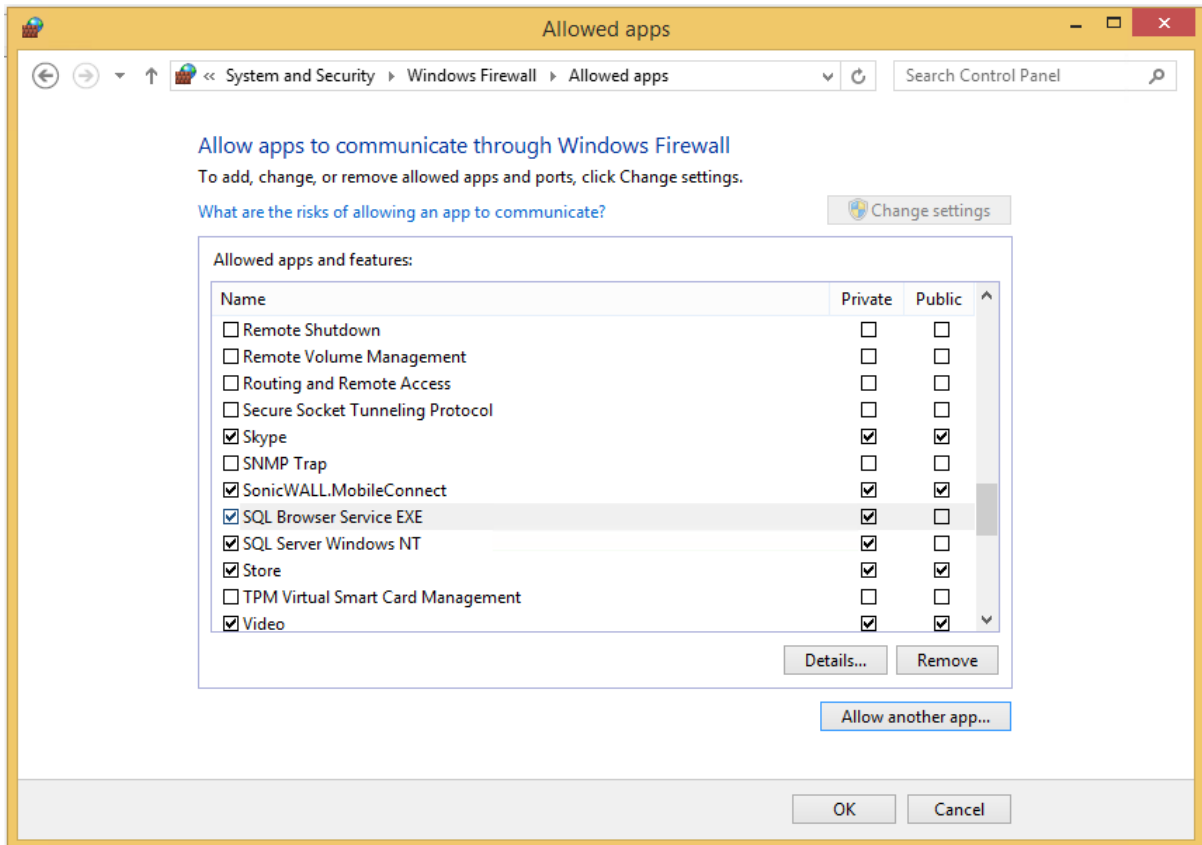

- Measures overall system memory usage, focusing on driver allocations and dynamic allocations.
- Minifilter diagnostic: Boot performance (Fast Startup)**
Identifies performance issues with minifilter drivers during system boot.
- Minifilter diagnostic: File handling**
Identifies performance issues with minifilter drivers while performing common file functions, such as copy, move, delete, and zip.
- Minifilter diagnostic: Internet Explorer**
Identifies performance issues with minifilter drivers during Internet Explorer launch.
- Photo handling**
Measures the time it takes to complete common user tasks, such as viewing, searching and manipulating a set of photos.
- Standby performance**
Measures time to standby/resume and identifies components that might cause delays.
- Streaming media performance**
This assessment measures streaming media quality on Internet Explorer.
- Windows Media Player performance and quality**
Evaluates the quality of audio and video playback using multiple formats and resolutions.
- Windows Store apps performance**
Measures the launch time, suspend time and resource utilization of Windows Store apps.
- Windows UI performance**
Helps you understand the performance of the new Windows UI.

Summary

Progress

Confirmation

In order to make a SQL Server connection using Windows integrated security from Windows PE, it may be necessary to first establish a secure connection to the server. This is done by mapping a drive to the server. Specify the name of an existing share on the server that can be used to make this mapped drive connection.

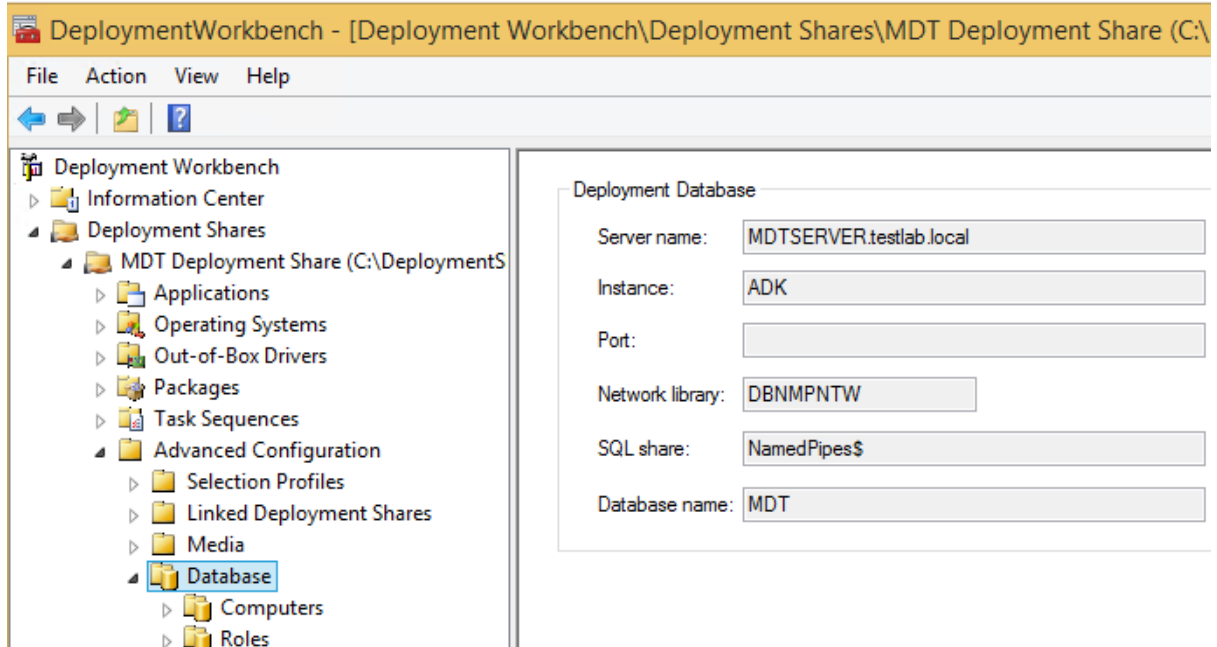

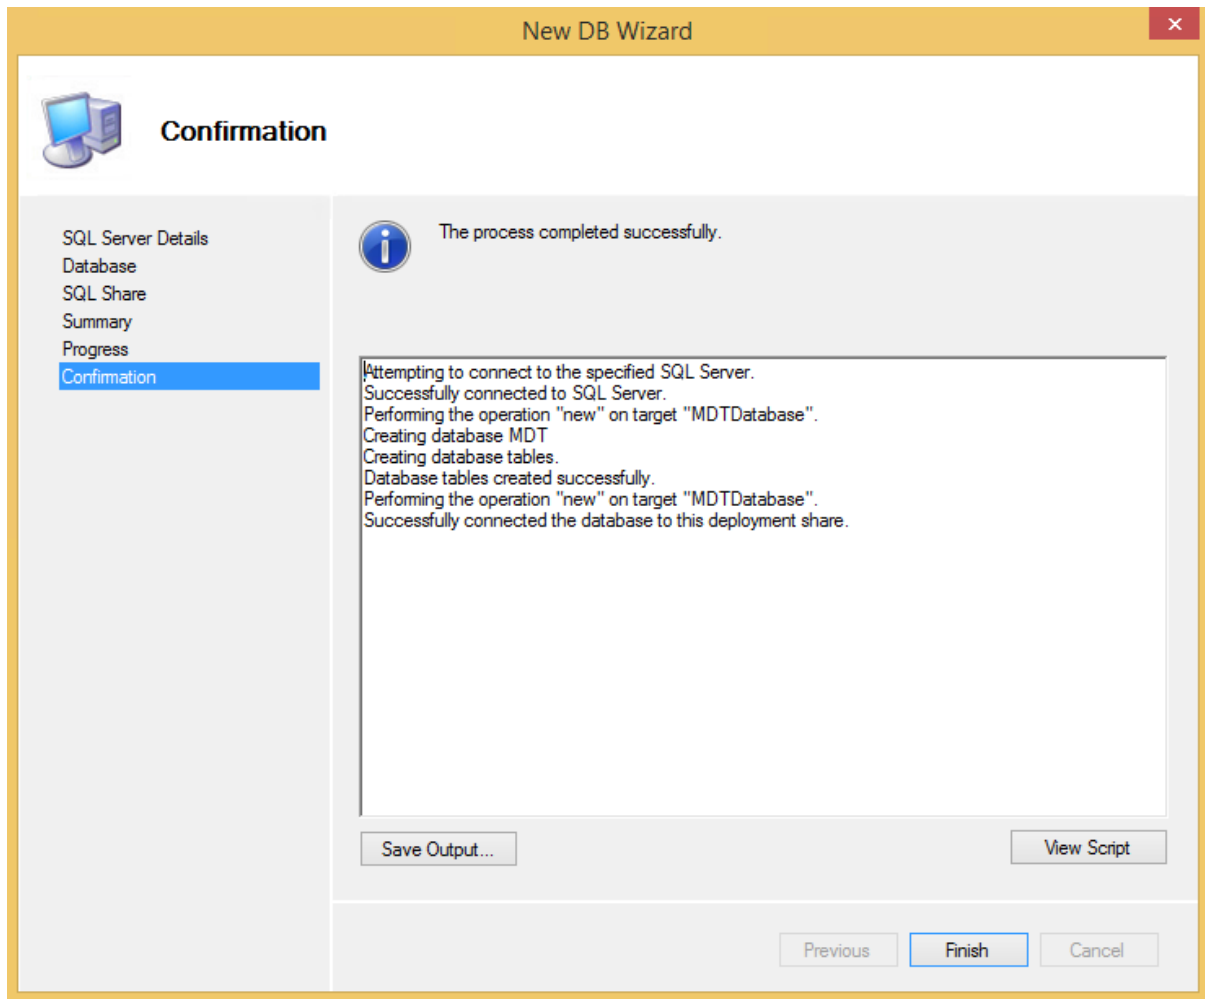

SQL Share: (optional)

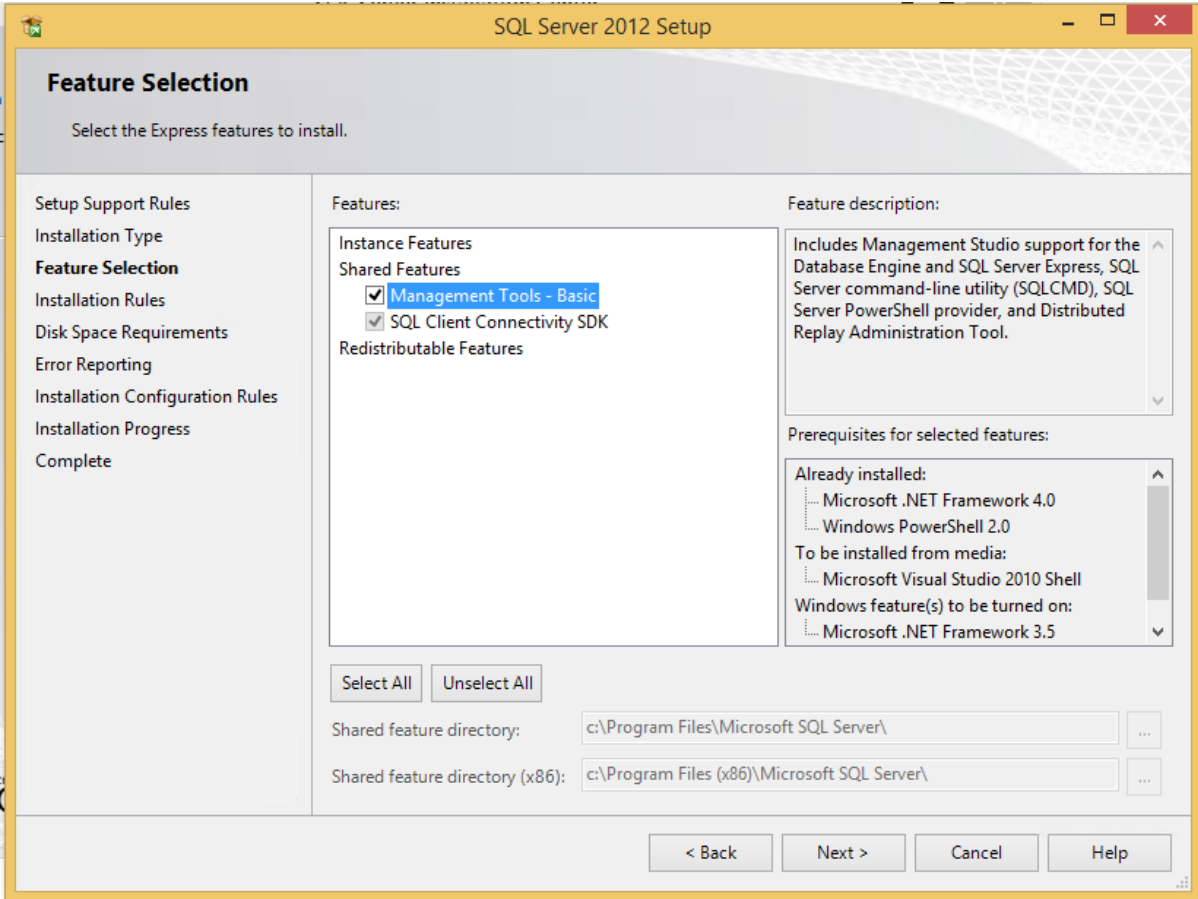

Example: DeploymentShare\$
