The screenshot shows the Visual Studio IDE with a design view at the top and XAML code below. The design view displays four colored rectangles: red, green, blue, and yellow. The yellow rectangle is positioned to the right of the blue rectangle. The Properties window on the right shows the 'yellowBorder' element selected, with the 'RightOf' property set to 'blueBorder' and 'AlignTopWithPanel' checked. A red callout box points to the XAML code for the yellow border with the text: "Set 'yellowBorder' to the right of 'blueBorder' but top aligned with panel".

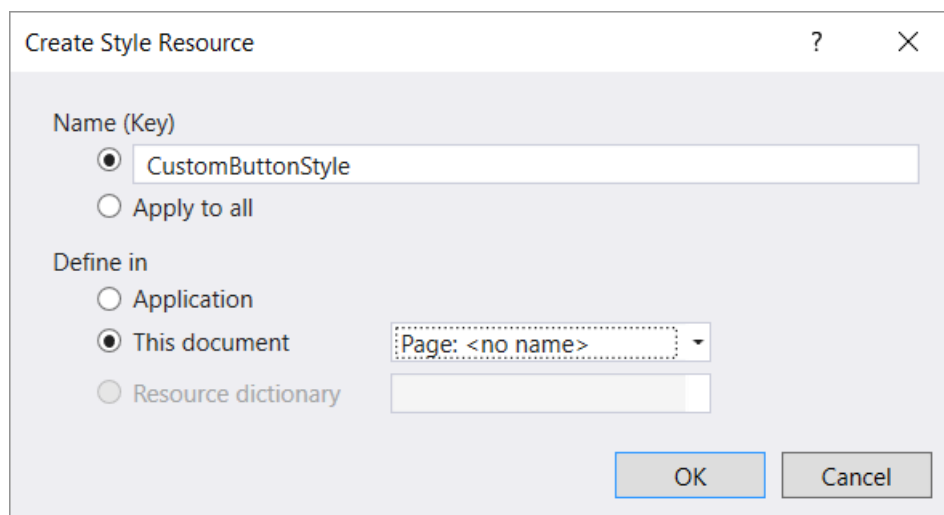

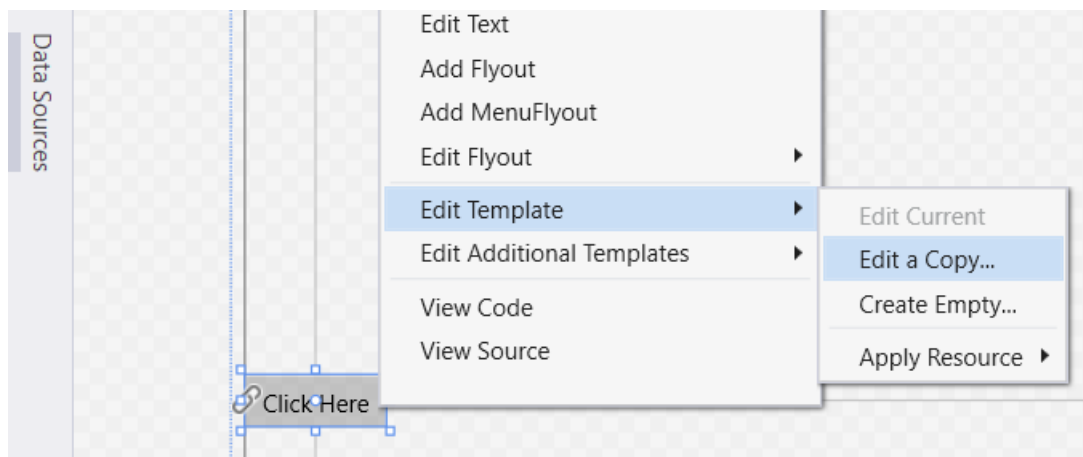

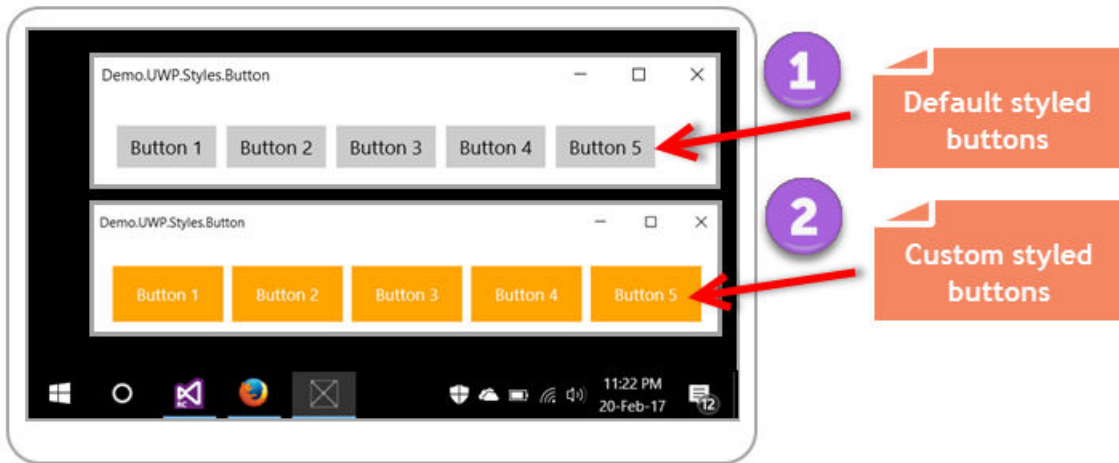

```

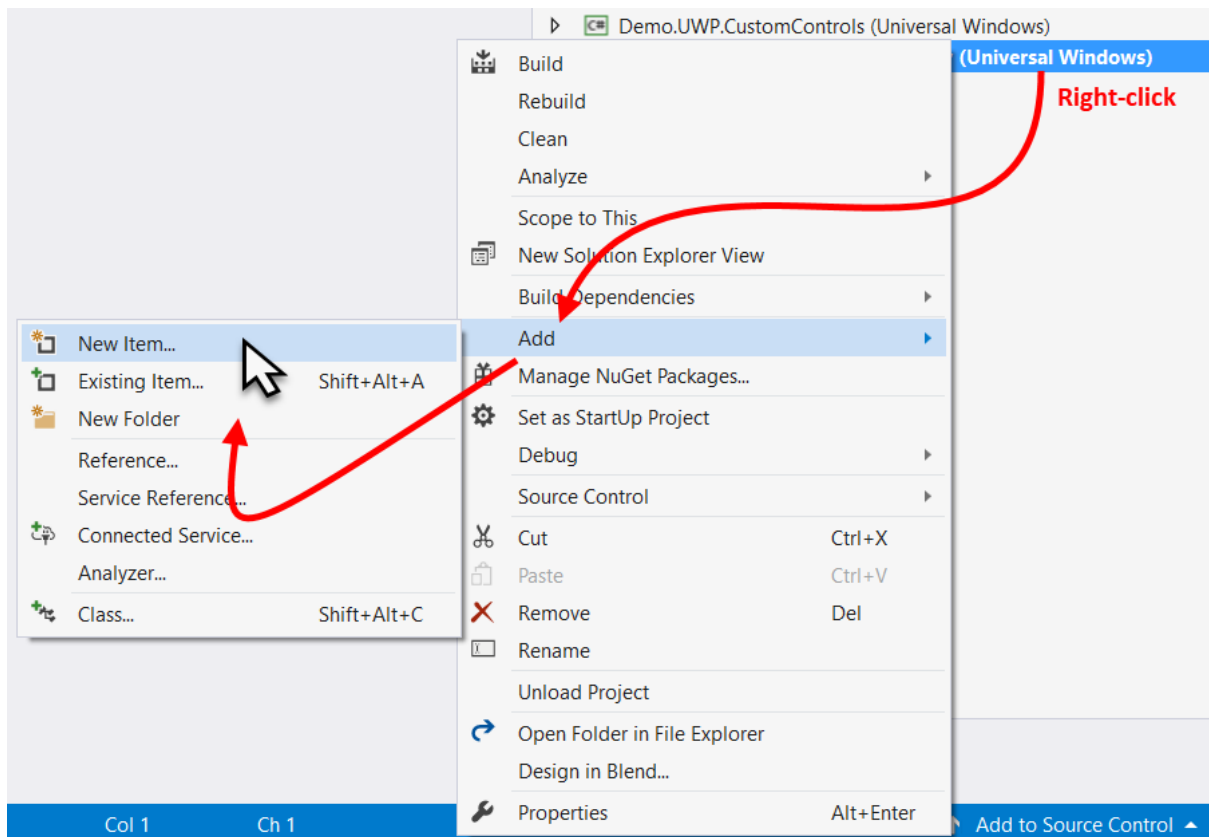

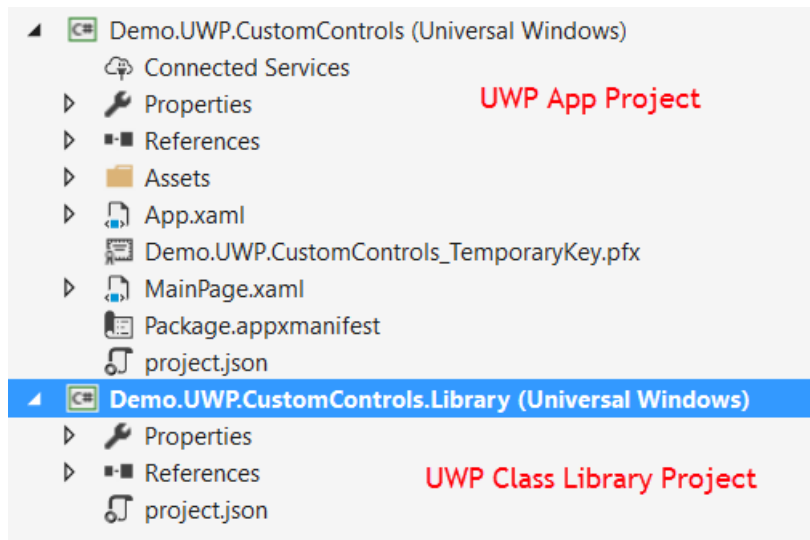

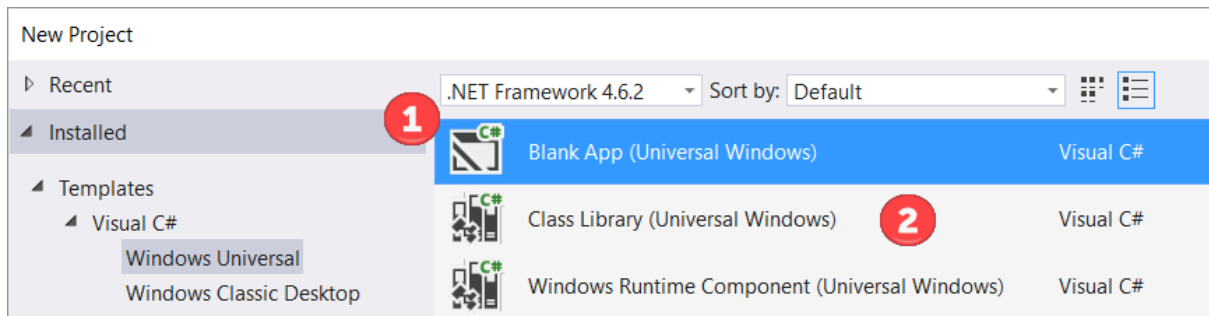

<RelativePanel>
  <Border x:Name="redBorder" Background="Red" Width="300" Height="150"/>
  <Border x:Name="greenBorder" Background="Green" Width="300" Height="150"
    RelativePanel.Below="redBorder"/>
  <Border x:Name="blueBorder" Background="Blue" Width="300" Height="150"
    RelativePanel.Below="redBorder"
    RelativePanel.RightOf="greenBorder"/>
  <Border x:Name="yellowBorder" Background="Yellow" Width="300" Height="150"
    RelativePanel.AlignTopWithPanel="True"
    RelativePanel.RightOf="blueBorder"/>
</RelativePanel>

Chapter 5: Building Applications with .NET Core

```

C:\Windows\system32\cmd.exe

D:\Demo>dotnet new

Welcome to .NET Core!
-----
Learn more about .NET Core @ https://aka.ms/dotnet-docs. Use dotnet --help to see available commands or go
to https://aka.ms/dotnet-cli-docs.

Telemetry
-----
The .NET Core tools collect usage data in order to improve your experience. The data is anonymous and does
not include command-line arguments. The data is collected by Microsoft and shared with the community.
You can opt out of telemetry by setting a DOTNET_CLI_TELEMETRY_OPTOUT environment variable to 1 using your
favorite shell.
You can read more about .NET Core tools telemetry @ https://aka.ms/dotnet-cli-telemetry.

Configuring...
-----
A command is running to initially populate your local package cache, to improve restore speed and enable of
fline access. This command will take up to a minute to complete and will only happen once.
Decompressing 100% 5873 ms
Expanding 100% 95342 ms

WARNING: 1 issue(s) found with package 'Demo.Packt.Kunal.NuGetDemoLibrary'.

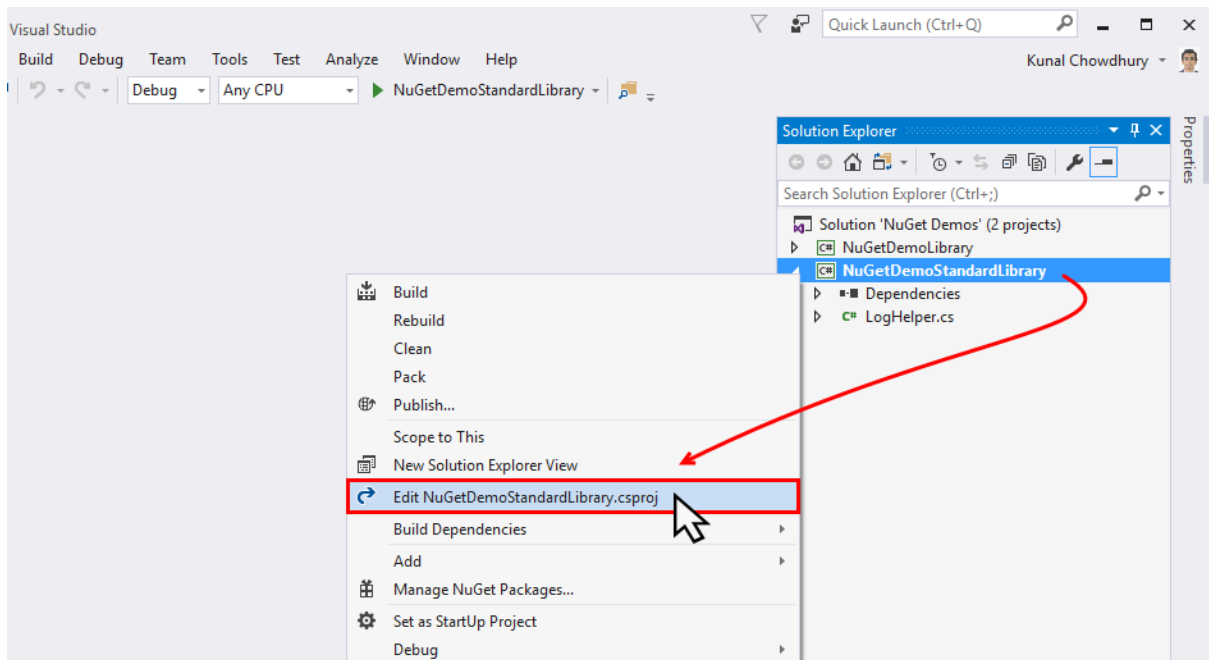

Issue: Assembly not inside a framework folder.
Description: The assembly 'lib\NuGetDemoLibrary.dll' is placed directly under 'lib' folder. It is recommended that assemblies be placed inside a framework-specific folder.
Solution: Move it into a framework-specific folder. If this assembly is targeted for multiple frameworks, ignore this warning.

Summary

Azure development *

Included

- ✓ Azure development prerequisites
- ✓ .NET Framework 4.6.1 development ...
- ✓ .NET Core 1.0 - 1.1 development tools
- ✓ ASP.NET and web development tools

Optional

- ✓ Azure Data Lake Tools
- ✓ Azure Resource Manager tools
- ✓ Azure Cloud Services tools
- ✓ Azure Mobile Apps SDK
- ✓ Service Fabric Tools
- PowerShell tools
- ✓ Windows Communication Foundation

By continuing, you agree to the license for the Visual Studio edition you selected. We also offer the ability to download other software with Visual Studio. This software is licensed separately, as set out in the 3rd Party Notices or in its accompanying license. By continuing, you also agree to those licenses.

Microsoft Azure < Windows (C#)

Windows (C#)
Quick start

1 Connect a database

You already have a data connection

2 Create a table API

You already have a TodoItem table

Backend language:
Node.js

I acknowledge that this will overwrite all site contents.

Create TodoItem table

To create additional tables later, navigate to the 'Easy Tables' settings.

Microsoft Azure < Windows (C#)

Windows (C#)
Quick start

3 Configure your client application

CREATE A NEW APP | CONNECT AN EXISTING APP ←

In Visual Studio, right-click your Windows project, select 'Manage NuGet Packages,' search for the Microsoft.Azure.Mobile.Client package, and click 'Install.'

In your App.xaml.cs file, add a 'using Microsoft.WindowsAzure.MobileServices;' statement. Then copy and paste in the following code:

```
public static MobileServiceClient MobileService =  
new MobileServiceClient(  
    "https://kunal-chowdhury-service.azurewebsites.net"  
);
```

Add a sample TodoItem class to your project:

```
public class TodoItem {  
    public string Id { get; set; }  
    public string Text { get; set; }  
    public bool Complete { get; set; }  
}
```

```
14 public partial class App : Application
15 {
16     public static MobileServiceClient MobileService =
17         new MobileServiceClient("https://kunal-chowdhury-service.azurewebsites.net");
18 }
19
20
```

Generate type 'MobileServiceClient'

Install package 'Microsoft.Azure.Mobile.Client' Find and install latest version

Install with package manager...

Encapsulate field: 'MobileService' (and use property)

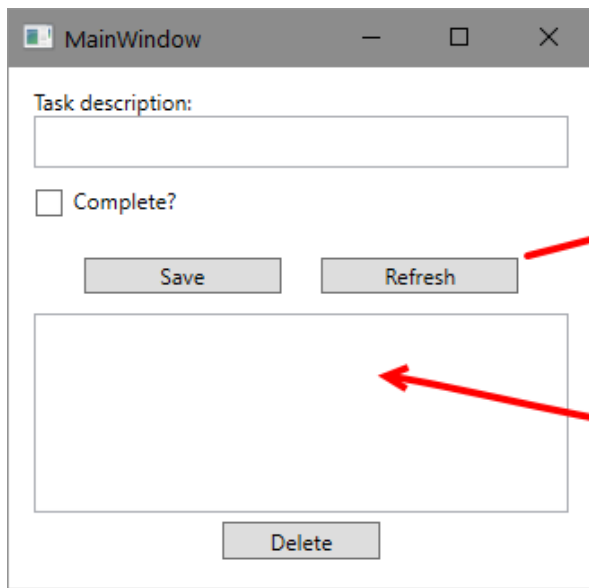

Encapsulate field: 'MobileService' (but still use field)

CS0246 The type or namespace name 'MobileServiceClient' could not be found (are you missing a using directive or an assembly reference?)

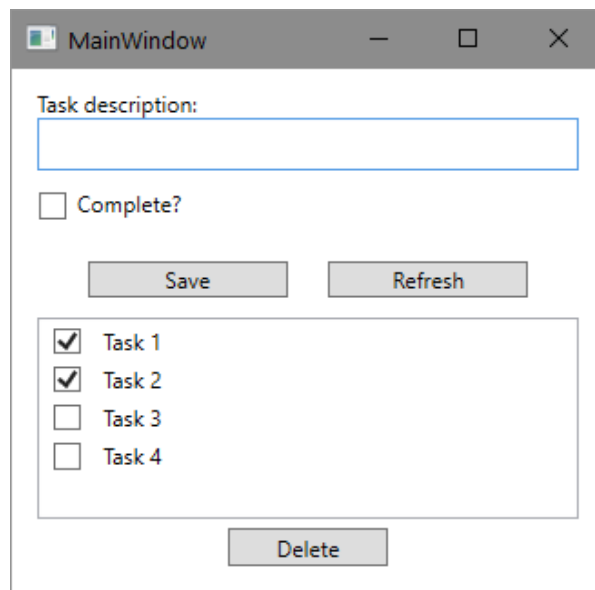

```
using Microsoft.WindowsAzure.MobileServices;
using System;
...
```

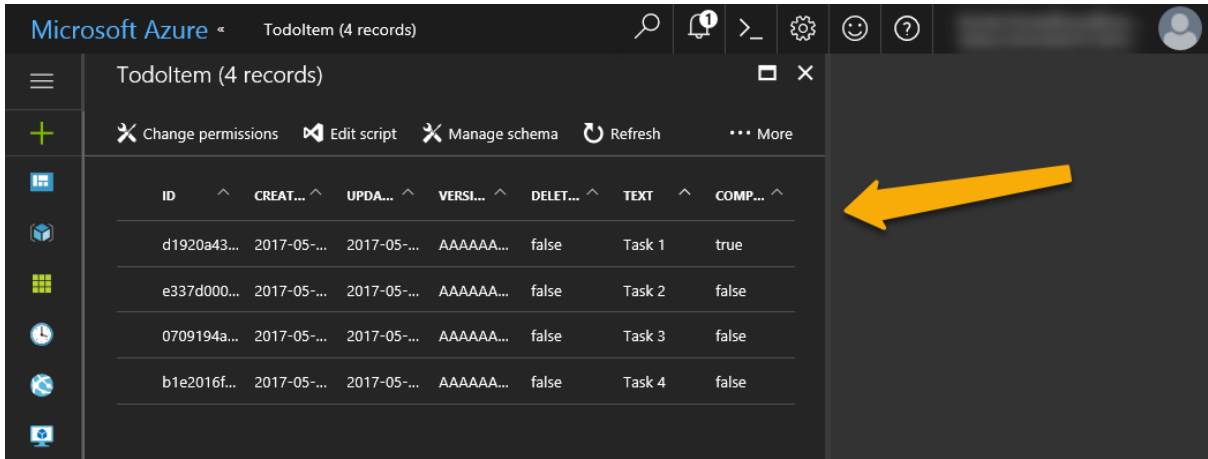

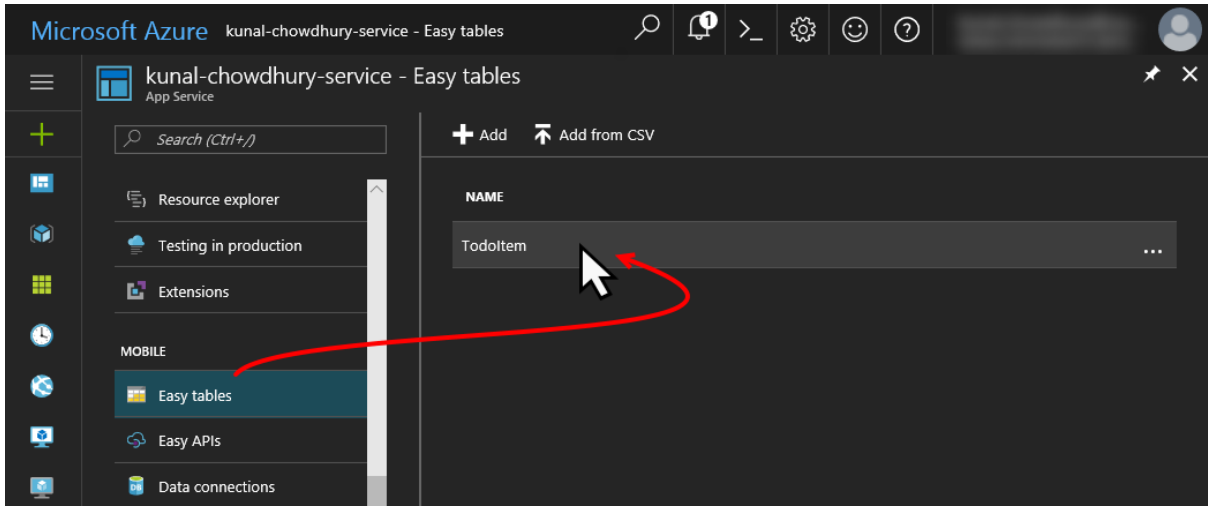

Find and install latest version of 'Microsoft.Azure.Mobile.Client'

Preview changes

Clicking on 'Refresh' button will fetch data from server and populate on this ListBox

Review changes

A screenshot of a GitHub pull request diff view. The file being reviewed is "ConsoleAppDemo/Program.cs". The diff shows changes to the "Main" method, with lines 8-11 highlighted in green. Line 11 has a blue plus sign icon circled in red. Below the diff, there is a "Write" section with a text area containing "Leave a comment". At the bottom, there are three buttons: "Cancel", "Add single comment", and "Start a review", with a mouse cursor pointing at the "Start a review" button.
