Element to Element Data Binding Demo

Font Size: 20

Element to Element Data Binding Demo

Font Size: 35

The image shows two screenshots of a slider control. In the top screenshot, the text 'Font Size: 20' is displayed above a slider. The slider's thumb is positioned at approximately 20% of the track, circled in red. A red arrow points to the right from the thumb. In the bottom screenshot, the text 'Font Size: 35' is displayed above a slider. The slider's thumb is positioned at approximately 80% of the track, also circled in red.

**"Disabled" because the fields are empty**

The screenshot shows a window titled 'MainWindow' with a green title bar. On the left is a list of users: 'User One', 'User Two', 'User Three', and 'User Four'. Below the list is a 'Selected:' label. On the right is a form with two text input fields labeled 'Firstname' and 'Lastname'. Below these fields is an 'Add' button. The 'Add' button is grayed out, indicating it is disabled. A red arrow points from the text 'Disabled because the fields are empty' to the 'Add' button.

EmployeeService Service

localhost:59795/Services/EmployeeService.svc

## EmployeeService Service

You have created a service.

To test this service, you will need to create a client and use it to call the service. You can do this using the svcutil.exe tool from the command line with the following syntax:

```
svcutil.exe http://localhost:59795/Services/EmployeeService.svc?wsdl
```

You can also access the service description as a single file:

```
http://localhost:59795/Services/EmployeeService.svc?singleWsdl
```

This will generate a configuration file and a code file that contains the client class. Add the two files to your client application and use the generated client class to call the Service. For example:

**C#**

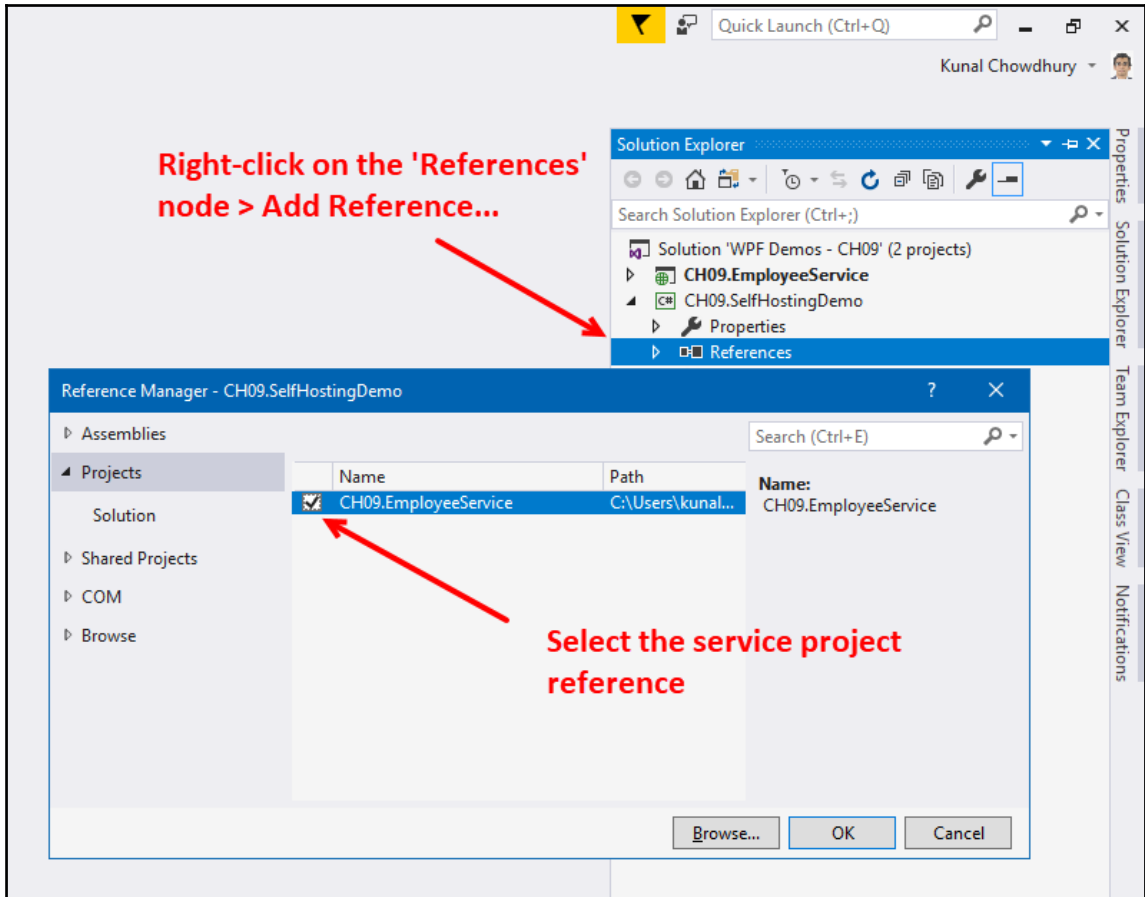

```
class Test
{
    static void Main()
    {
        EmployeeServiceClient client = new EmployeeServiceClient();

        // Use the 'client' variable to call operations on the service.

        // Always close the client.
        client.Close();
    }
}
```

```
http://localhost:59795/Services/EmployeeService.svc?wsdl

# Chapter 10: Debugging and Threading

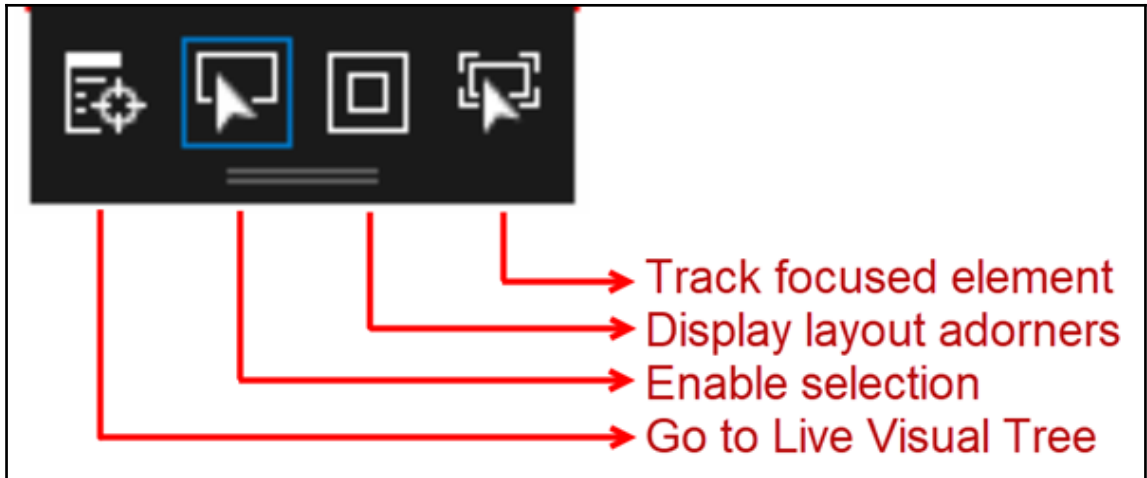

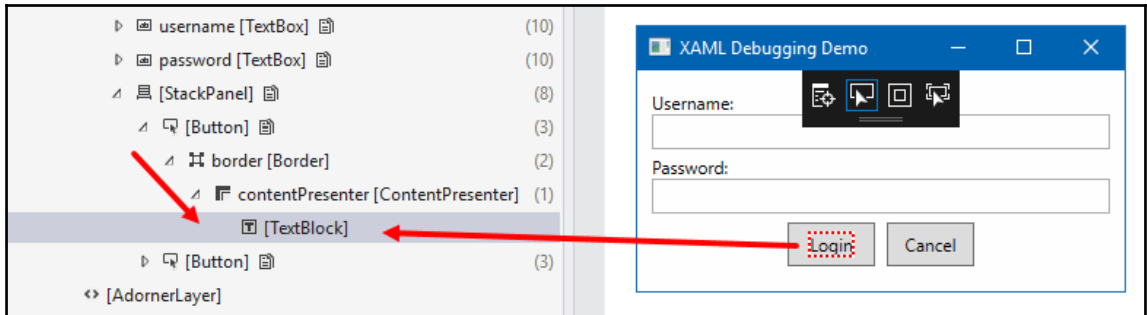

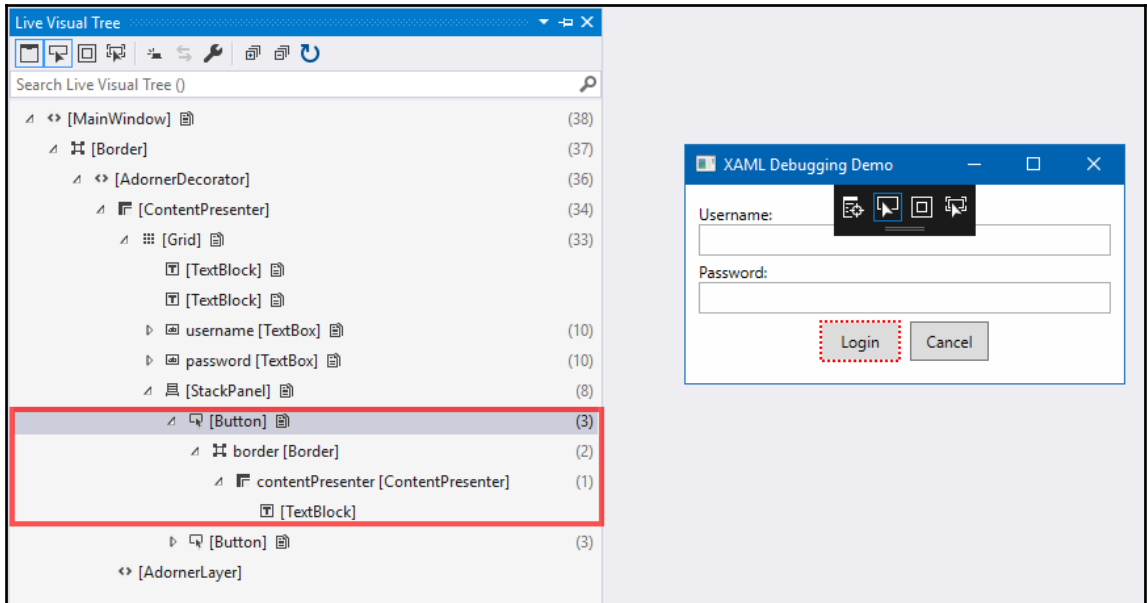

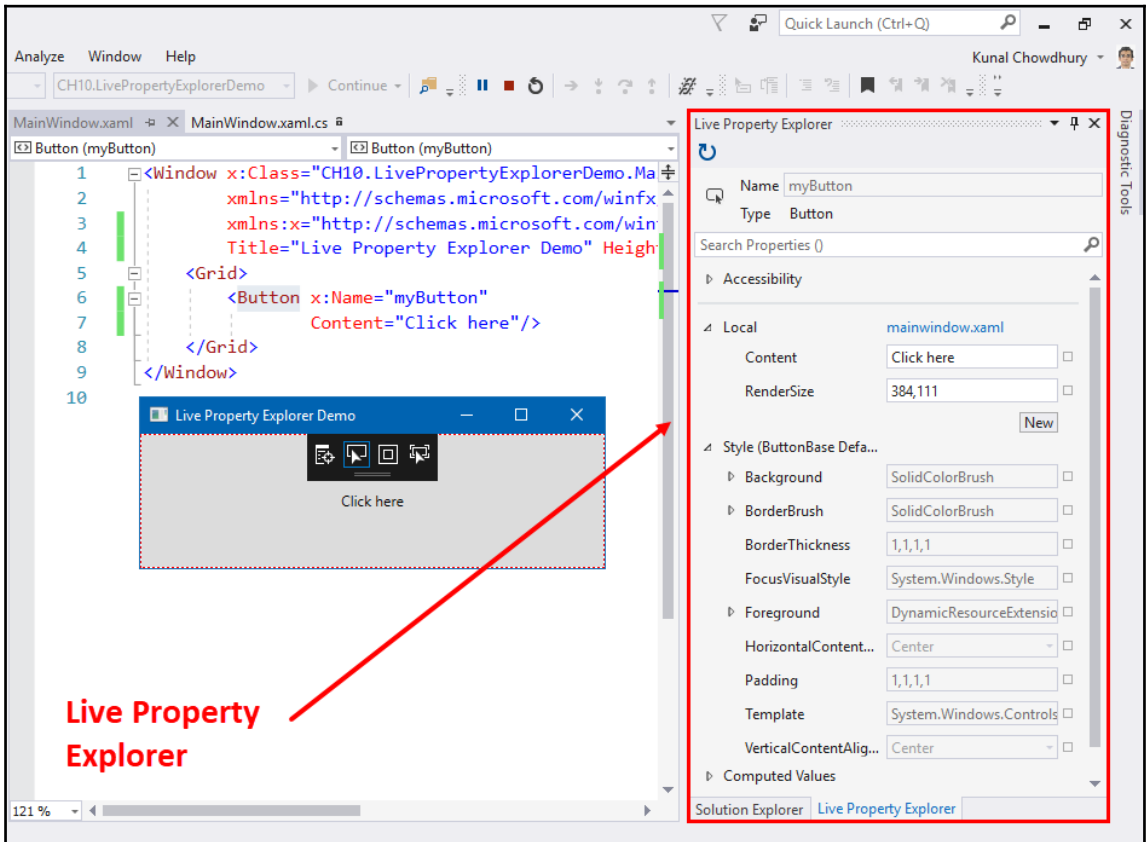

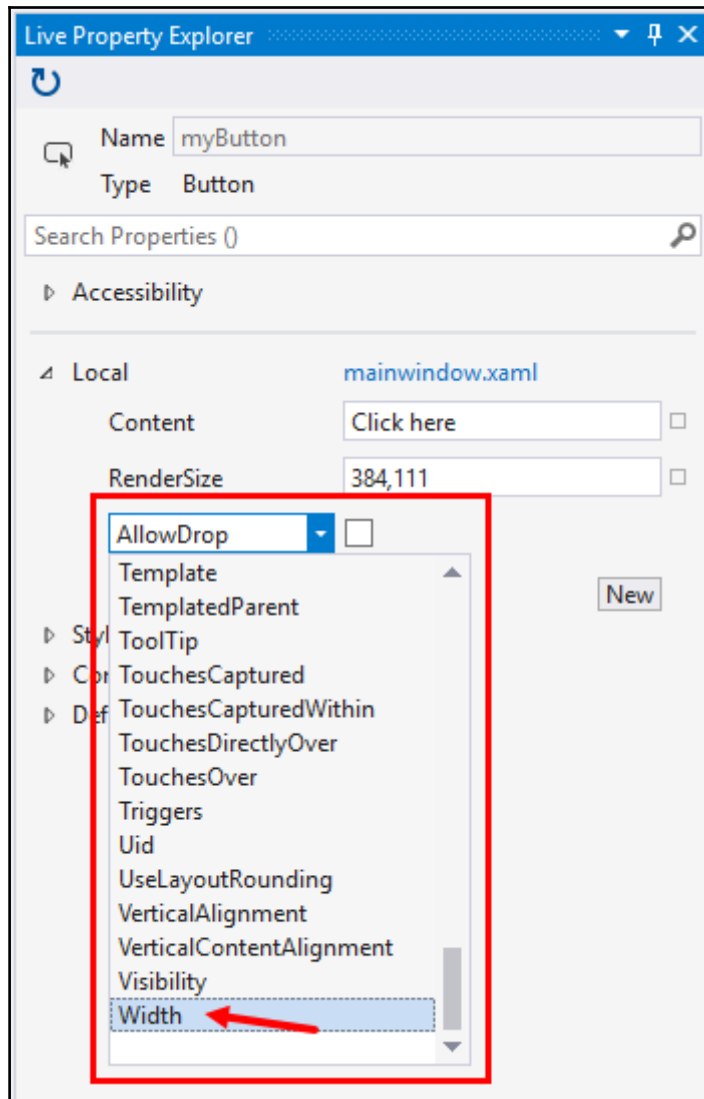

The image shows a screenshot of the Visual Studio IDE with three main components:

- XAML Editor:** Displays the following code for `MainWindow.xaml`:

```
1 <Window x:Class="CH10.LivePropertyExplorerDemo.Ma
2     xmlns="http://schemas.microsoft.com/winfx
3     xmlns:x="http://schemas.microsoft.com/win
4     Title="Live Property Explorer Demo" Height
5
6 <Grid>
7     <Button x:Name="myButton"
8         Content="Click here"/>
9 </Grid>
10 </Window>
```
- Live Preview:** A window titled "Live Property Explorer Demo" showing a button with the text "Click here".
- Live Property Explorer:** A tool window showing the properties of the selected `myButton` control. It lists categories like Accessibility, Local, Style, Computed Values, and Default. Under the **Local** category, the `Content` property is set to "Click here" and the `RenderSize` property is set to "384,111". A red arrow points to the `RenderSize` property, and a mouse cursor is hovering over the `New` button next to it. A tooltip below the `New` button reads "Set a property in current category."

# Chapter 11: Interoperability with Win32 and WinForm

```
<Window x:Class="CH11.WinFormInWpfXamlDemo.MainWindow"
  xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
  xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
  x:Name="window" Title="Hosting WinForm Control in WPF"
  Height="300" Width="600">
  <Grid>
    <Grid.ColumnDefinitions>
      <ColumnDefinition Width="*" />
      <ColumnDefinition Width="Auto" />
    </Grid.ColumnDefinitions>
    <TextBlock x:Name="txtBlock"
      Grid.Column="0"
      Margin="8"
      Text="Hello World!" />
    <WindowsFormsHost>
  </WindowsFormsHost>
  </Grid>
</Window>
```

WindowsFormsHost is not supported in a Windows Presentation Foundation (WPF) project.

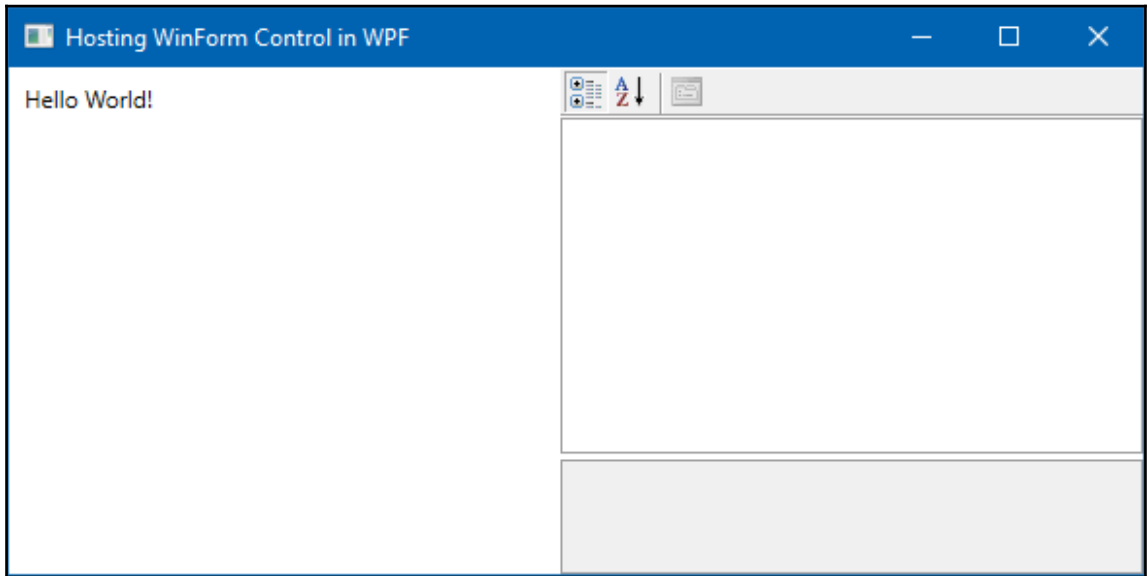

```
15 <WindowsFormsHost Width="300"
16 Grid.Column="1">
17 <PropertyGrid/>
18
19
20 </Window>
21
```

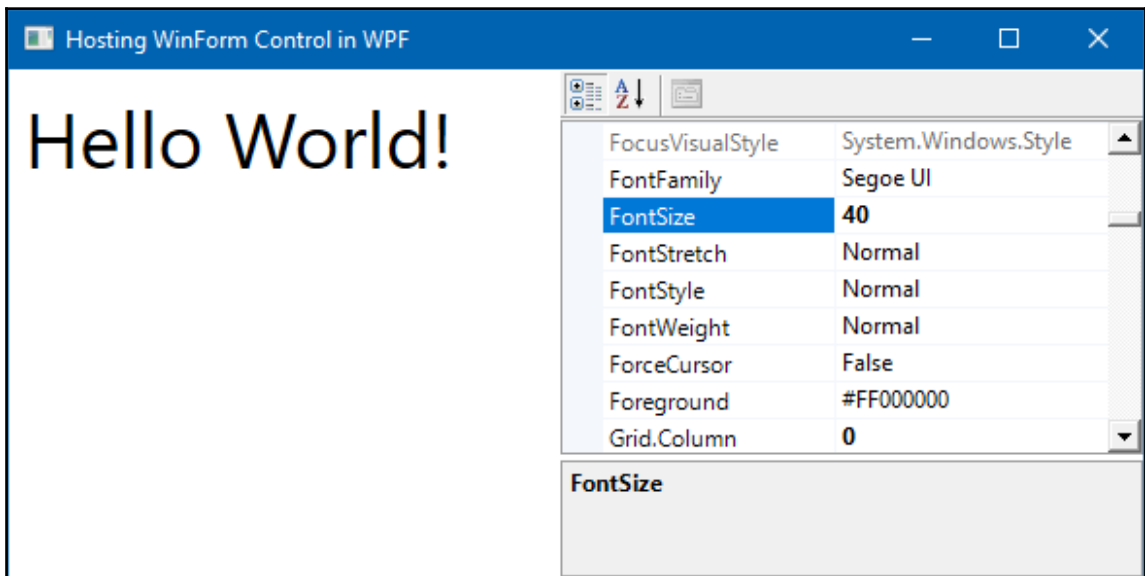

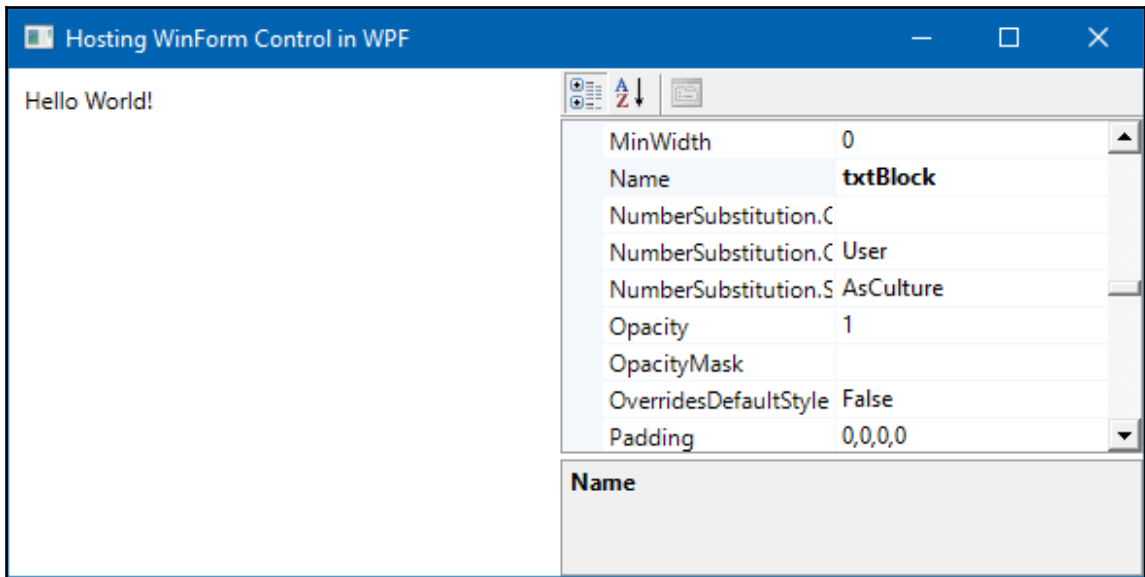

Add xmlns System.Windows.Forms

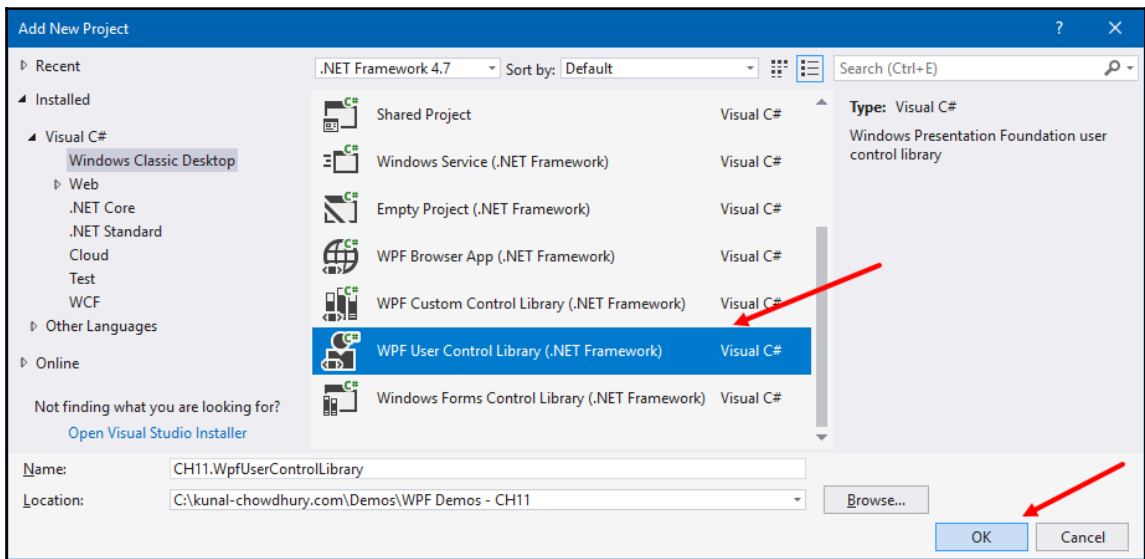

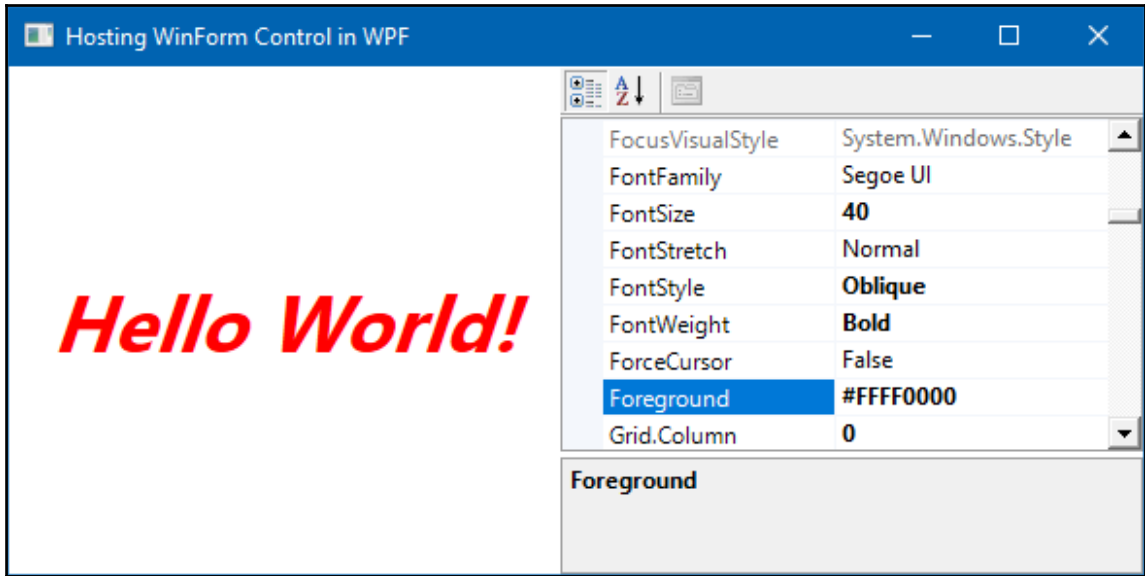

XAML0414 Namespace is missing

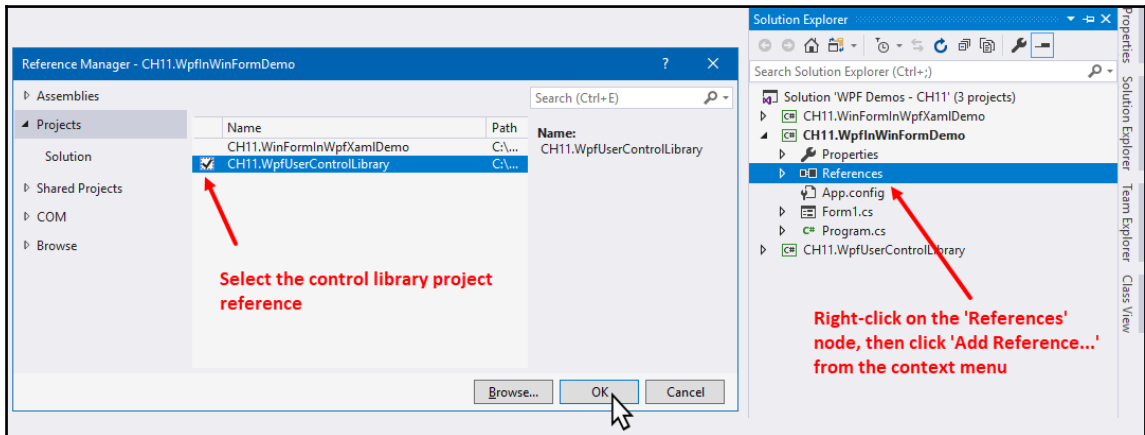

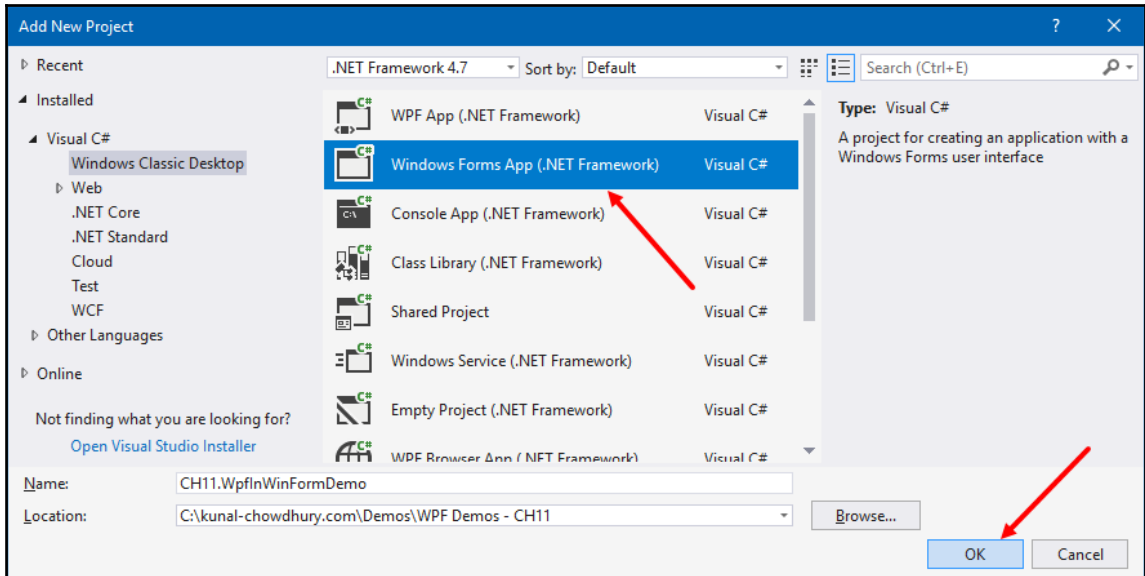

```
...
xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
xmlns:forms="clr-namespace:System.Windows.Forms;assembly=System.Windows.Forms"
x:Name="window" Title="Hosting WinForm Control in WPF"
...
Grid.Column="1">
<PropertyGrid/>
<forms:PropertyGrid/>
</WindowsFormsHost>
...
```
